# Introduction to the Capabilities of CANDE

August 5, 2009

Culvert Analysis and DEsign (CANDE) software, is a tool used by transportation professionals to analyze and design buried structures. This software was updated in 2007. The finite element software is designed to analyze typical buried structures such as pipe culverts, arches and box culverts. Enhancements over earlier version of the software include an updated finite element analysis engine and graphical tools for interpreting the CANDE output. Panelists at this webinar will discuss the improvements and upgrades to the software, as well as demonstrate the diverse capability of the software to users.

The report and software may be purchased prior to the webinar for $45.00 from this link: http://books.trbbookstore.org/nr619.aspx

The report and software may also be downloaded from this link: http://www.trb.org/news/blurb_detail.asp?ID=9438
This link includes instructions for downloading an ISO file.

Presenters for this session include:

Michael G. Katona, PhD, Consultant
Gig Harbor, WA

Timothy J. McGrath, P.E., PhD, Simpson, Gumpertz & Heger Inc.
Waltham, MA

Tim Toliver P.E., Advanced Pipe Services, LLC
Bowling Green, OH

Mark Mlynarski, Michael Baker Jr. Inc.
Moon Township, PA
