

# Evaluating Airport Parking Strategies and Managing Parking Constraints

October 26, 2010

## Session Duration: 120 minutes

Parking facilities and operations are vital to the efficient and safe operation of airports. Generally, parking is the first and last experience many passengers have at the airport. In addition, parking is typically a significant source of revenue for airports. Many airports rely on parking revenues to finance investments in facilities and equipment. To better support parking strategies, TRB's Airport Cooperative Research Program (ACRP) has released two reports—Report 24: Guidebook on Evaluating Airport Parking Strategies and Supporting Technologies and Report 34: A Handbook to Assess Impacts of Constrained Parking. This webinar will explore the process of determining airport parking strategies, sample strategies to achieve those goals, types of constraints that airports experience, strategies that can be used to address them, and a demonstration on how to use the modeling tools' predictive capabilities.

Session presenters:

Peter Mandel, LeighFisher  
Gavin Duncan, LeighFisher  
Jim Jarvis, Ricondo and Associates, Inc.  
Lisa Reznar, Ricondo and Associates, Inc.  
Diane Ricard, DMR Consulting, Inc.  
Jeffery Dumont, Resource Systems Group, Inc.

Moderated by: Marci Greenberger, Transportation Research Board
