TELEMETERED TRAFFIC MONITORING STATION (TTMS 9956)

I-75 AT WHITE SPRINGS
Installed 2016

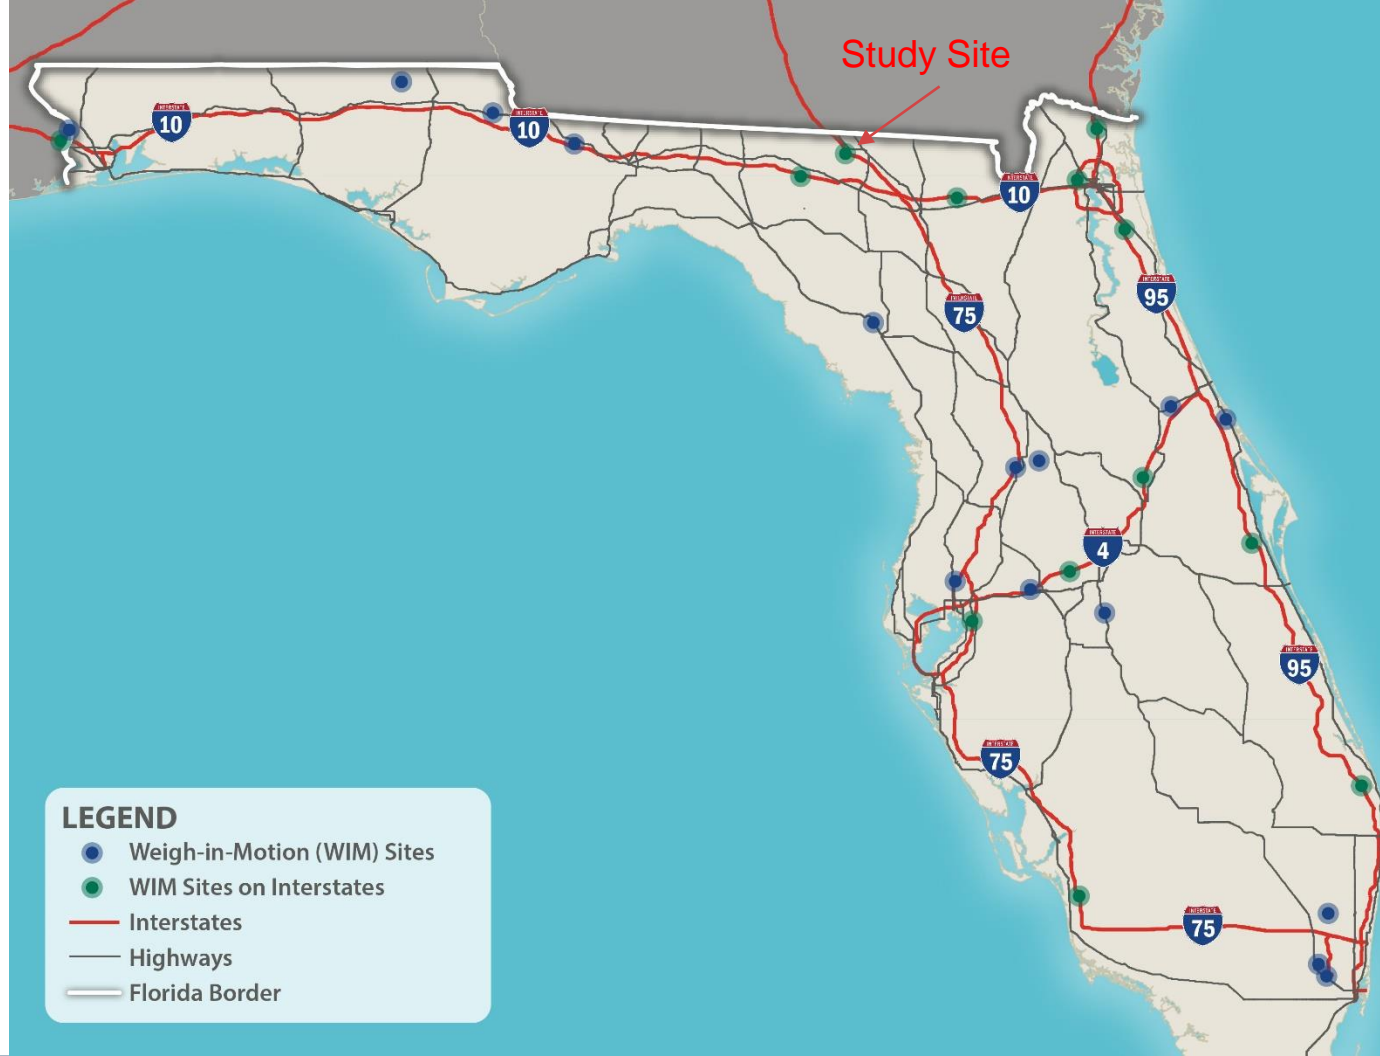

Legend: ■ Cabinet ■ Solar Array □ Inductive Loops ■ Kistler Sensor ■ BL Piezo Sensor

The elements with a  symbol are interactive. Hover your mouse to see a photo of the installed TTMS

Weigh in Motions Sites

- » 29 Statewide locations
- » 13 on Interstates
- » Per Vehicle Records w/ Time Stamp
- » Initial Study Site – ‘9956’ on I-75 near FL/GA border

FHWA Vehicle Classifications

1. Motorcycles
2 axles, 2 or 3 tires

2. Passenger Cars
2 axles, can have 1- or 2-axle trailers

3. Pickups, Panels, Vans
2 axles, 4-tire single units
Can have 1 or 2 axle trailers

4. Buses
2 or 3 axles, full length

5. Single Unit 2-Axle Trucks
2 axles, 6 tires (dual rear tires), single-unit

6. Single Unit 3-Axle Trucks
3 axles, single unit

7. Single Unit 4 or More-Axle Trucks
4 or more axles, single unit

8. Single Trailer 3- or 4-Axle Trucks
3 or 4 axles, single trailer

9. Single Trailer 5-Axle Trucks
5 axles, single trailer

10. Single Trailer 6 or More-Axle Trucks
6 or more axles, single trailer

11. Multi-Trailer 5 or Less-Axle Trucks
5 or less axles, multiple trailers

12. Multi-Trailer 6-Axle Trucks
6 axles, multiple trailers

13. Multi-Trailer 7 or More-Axle Trucks
7 or more axles, multiple trailers

FAF4 STCG Assignments

FAF	
Code	Commodity Description
1	Animals and Fish (live)
2	Cereal Grains (includes seed)
3	Agricultural Products (excludes Animal Feed, Cereal Grains, and Forage Products)
4	Animal Feed, Eggs, Honey, and Other Products of Animal Origin
5	Meat, Poultry, Fish, Seafood, and Their Preparations
6	Milled Grain Products and Preparations, and Bakery Products
7	Other Prepared Foodstuffs, Fats and Oils
8	Alcoholic Beverages and Denatured Alcohol
9	Tobacco Products
10	Monumental or Building Stone
11	Natural Sands
12	Gravel and Crushed Stone (excludes Dolomite and Slate)
13	Other Non-Metallic Minerals not elsewhere classified
14	Metallic Ores and Concentrates
15	Coal
16	Crude Petroleum
17	Gasoline, Aviation Turbine Fuel, and Ethanol (includes Kerosene, and Fuel Alcohols)
18	Fuel Oils (includes Diesel, Bunker C, and Biodiesel)
19	Other Coal and Petroleum Products, not elsewhere classified
20	Basic Chemicals
21	Pharmaceutical Products
22	Fertilizers
23	Other Chemical Products and Preparations
24	Plastics and Rubber
25	Logs and Other Wood in the Rough
26	Wood Products
27	Pulp, Newsprint, Paper, and Paperboard
28	Paper or Paperboard Articles
29	Printed Products
30	Textiles, Leather, and Articles of Textiles or Leather
31	Non-Metallic Mineral Products
32	Base Metal in Primary or Semi-Finished Forms and in Finished Basic Shapes
33	Articles of Base Metal
34	Machinery
35	Electronic and Other Electrical Equipment and Components, and Office Equipment
36	Motorized and Other Vehicles (includes parts)
37	Transportation Equipment, not elsewhere classified
38	Precision Instruments and Apparatus
39	Furniture, Mattresses and Mattress Supports, Lamps, Lighting Fittings, and Illuminated Signs
40	Miscellaneous Manufactured Products
41	Waste and Scrap (excludes of agriculture or food, see 041xx)
43	Mixed Freight
99	Commodity unknown

Conceptualization

- » Intimate knowledge of WIM data ✓
- » Roadside cameras ✓
- » Advanced knowledge of trucks/trailers ✓
- » Concept of Truck Taxonomy ✓
- » Basic knowledge of Transfer Learning ✓
- » Identify experts of Transfer Learning and Application Development ✓

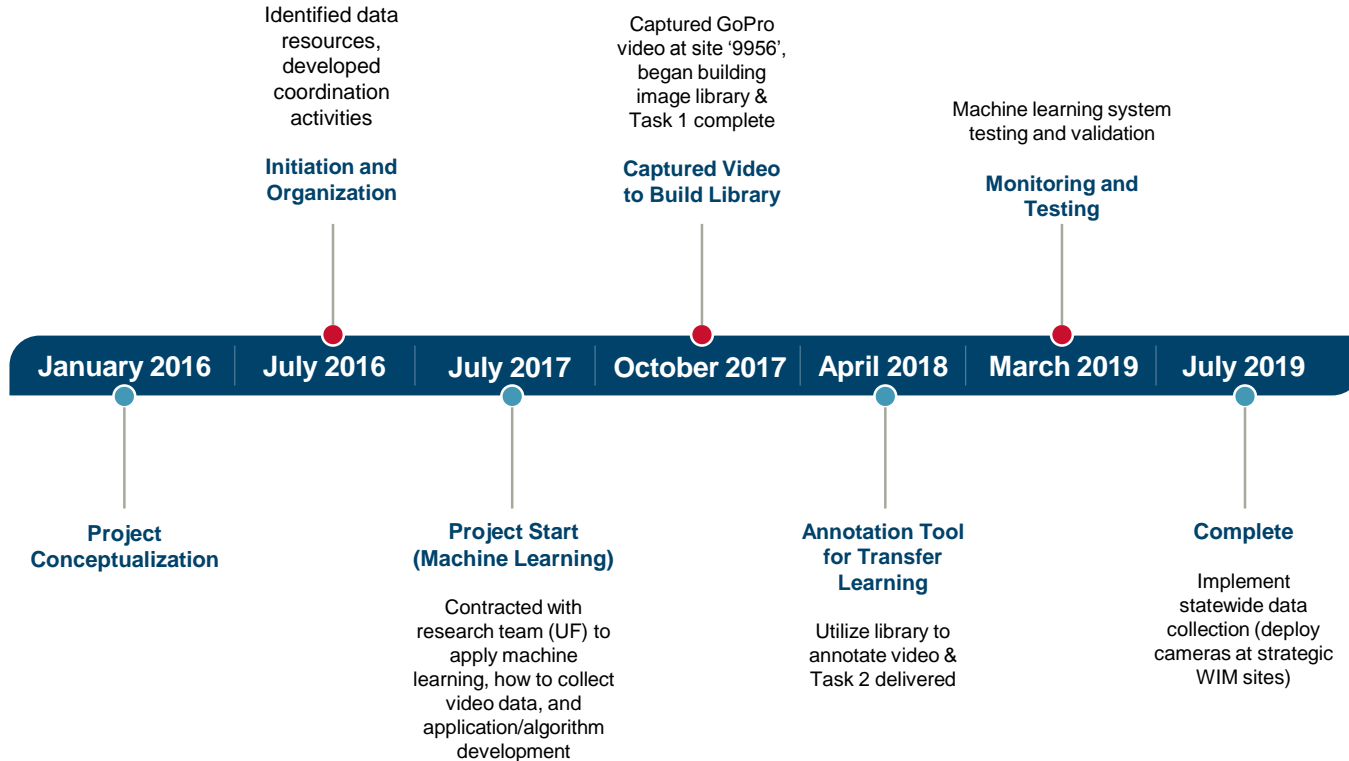

Research Progress Update

Project Team and Objectives

- University of Florida Transportation Institute  **UF** UNIVERSITY of FLORIDA
 - Principal Investigator – Sanjay Ranka
- FDOT TDA (project sponsor)  **FDOT**
 - Project Manager(s) – Jerry Scott, Ed Hutchinson, Eric Griffin
- **Project Start** – July 2017 - **Project End** – July 2019
 - Task 1 – Investigate approach for truck classification based on video and weight
 - Task 2 – Develop classification algorithms for automatic classification of trucks
 - Task 3 – Develop classification algorithms for commodity classification
 - Task 4 – Final Report

Research Project Timeline

Coding Languages and Hardware

Libraries: Pytorch, OpenCV, Dlib, Tkiner, ffmpeg

GPU Cards: 3 NVIDIA TITAN X Pascal Graphics Card (\$1,200 ea.)

1 NVIDIA TITAN V Graphics Card (\$2,999 ea.)

Programming Language: Python

Operating System: Ubuntu 16.04

Truck Taxonomy Library Development

Figure 5: Imbalance truck class distribution of our training dataset. In reality, Florida has 60-70% of Class 9 trucks. In this case, when we collect the training dataset, attentions should be paid to the minor classes (collecting more minor class samples to ensure a balanced distribution).

Initial Algorithm Training

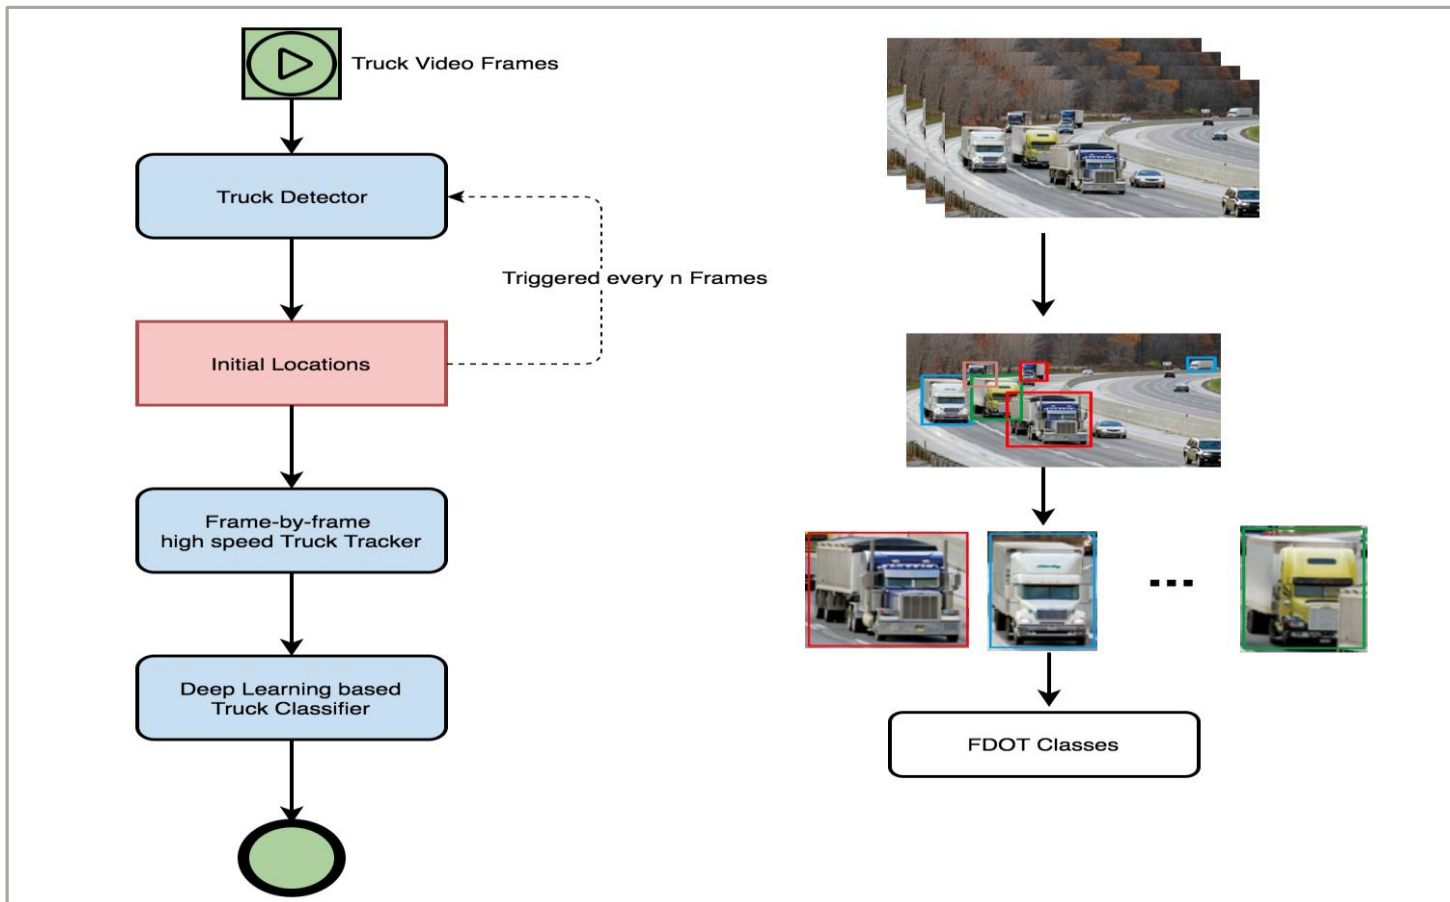

Image-Net Model, Researchers Image Database

- Over 15M labeled high resolution images
- Roughly 22k categories
 - This imagery is used to train the machine algorithm. Actual field collected imagery is used to test the trained machine algorithm.

Size and Aspect Ratio

Number of Trailers

Geometric Features for Classification

Number of wheels (proxy for number of axles)

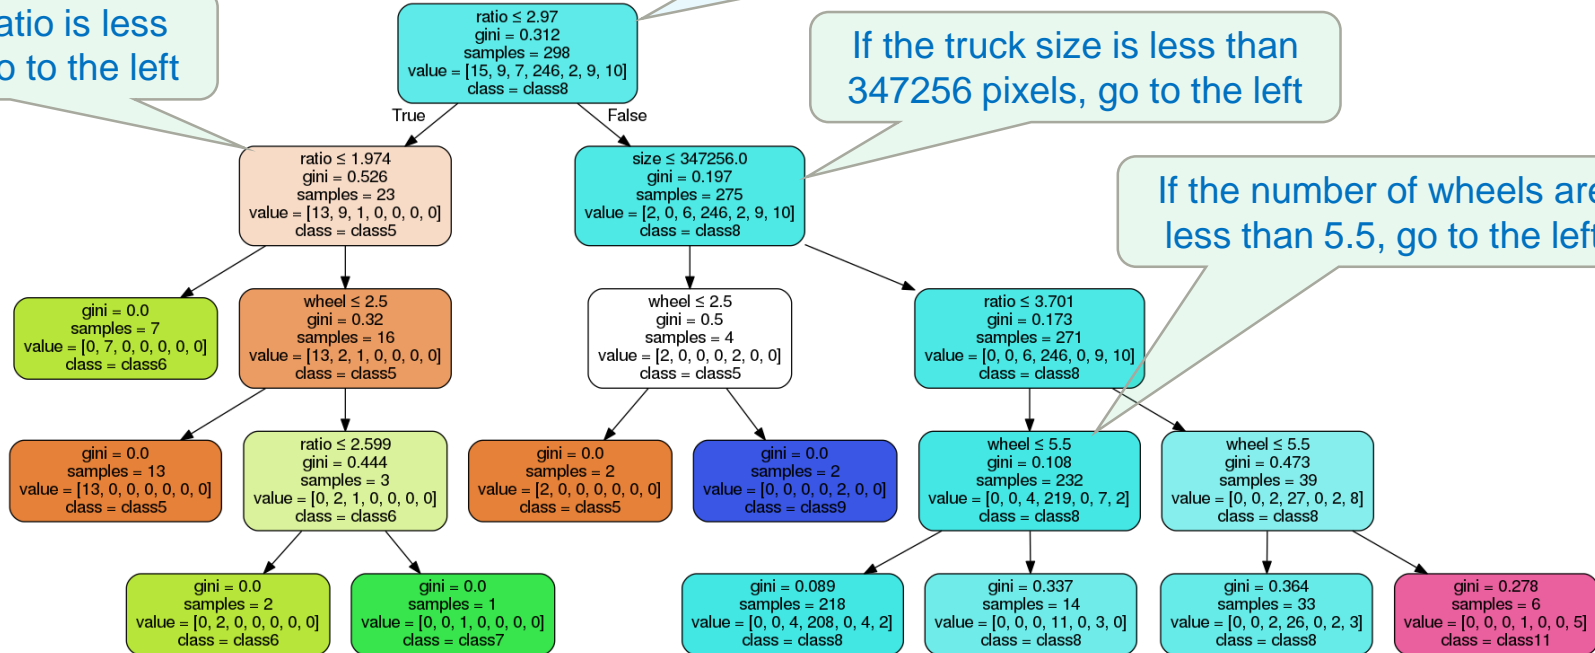

Example of decisioning based on geometrics features

If the aspect ratio is less than 1.9740, go to the left

If the aspect ratio is less than 2.97, go to the left

If the truck size is less than 347256 pixels, go to the left

If the number of wheels are less than 5.5, go to the left

Training Sample Results Summary

Truck Classification:

Training Accuracy	Validation Accuracy
100%	88%

Truck Tractor Classification:

Training Accuracy	Validation Accuracy	Top-3 Validation Accuracy
99.7%	91.6%	99.7%

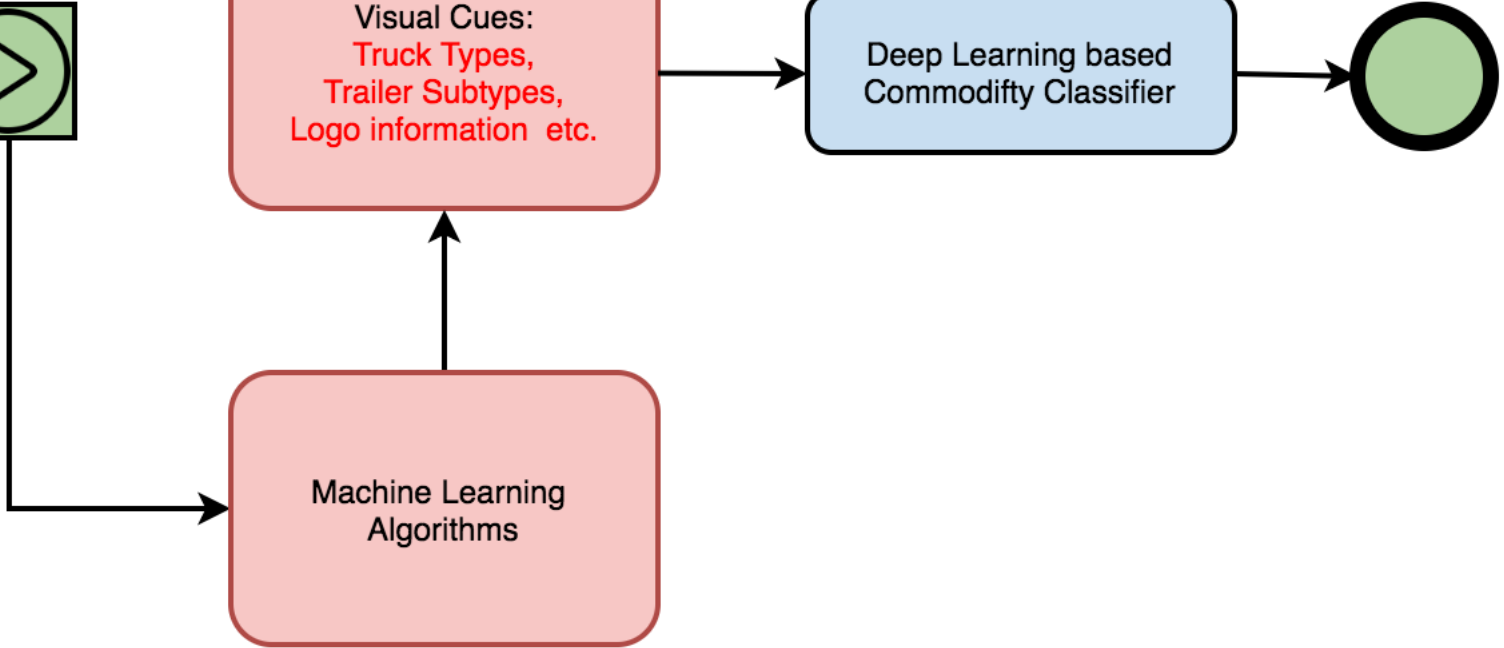

Truck Trailer Classification:

Training Accuracy	Validation Accuracy	Top-3 Validation Accuracy
100%	85.8%	91.9%

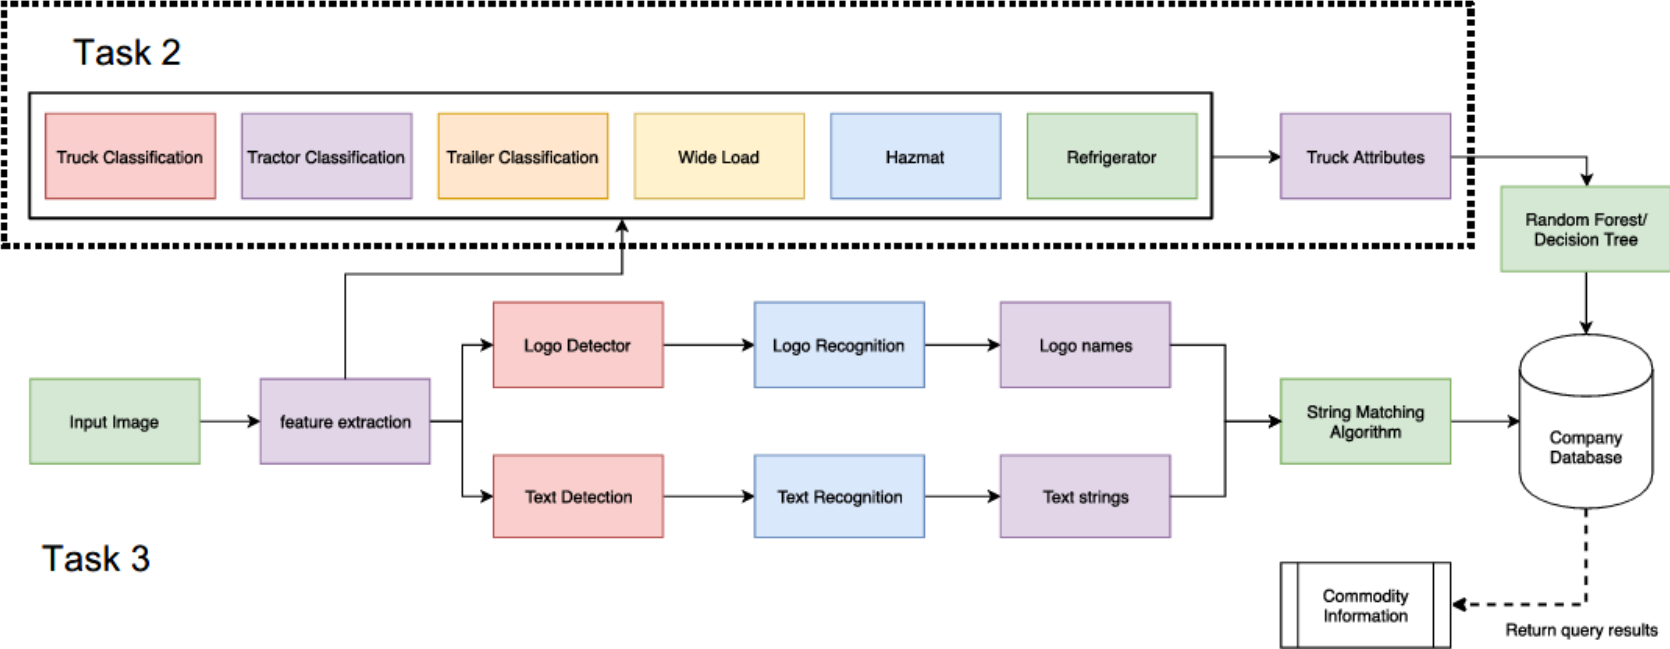

Attributes	Training Accuracy	Validation Accuracy
Hazmat	100%	86.4%
Wide load	100%	89.4%
Refrigerator unit	100%	83.1%

Commodity Monitoring Architecture

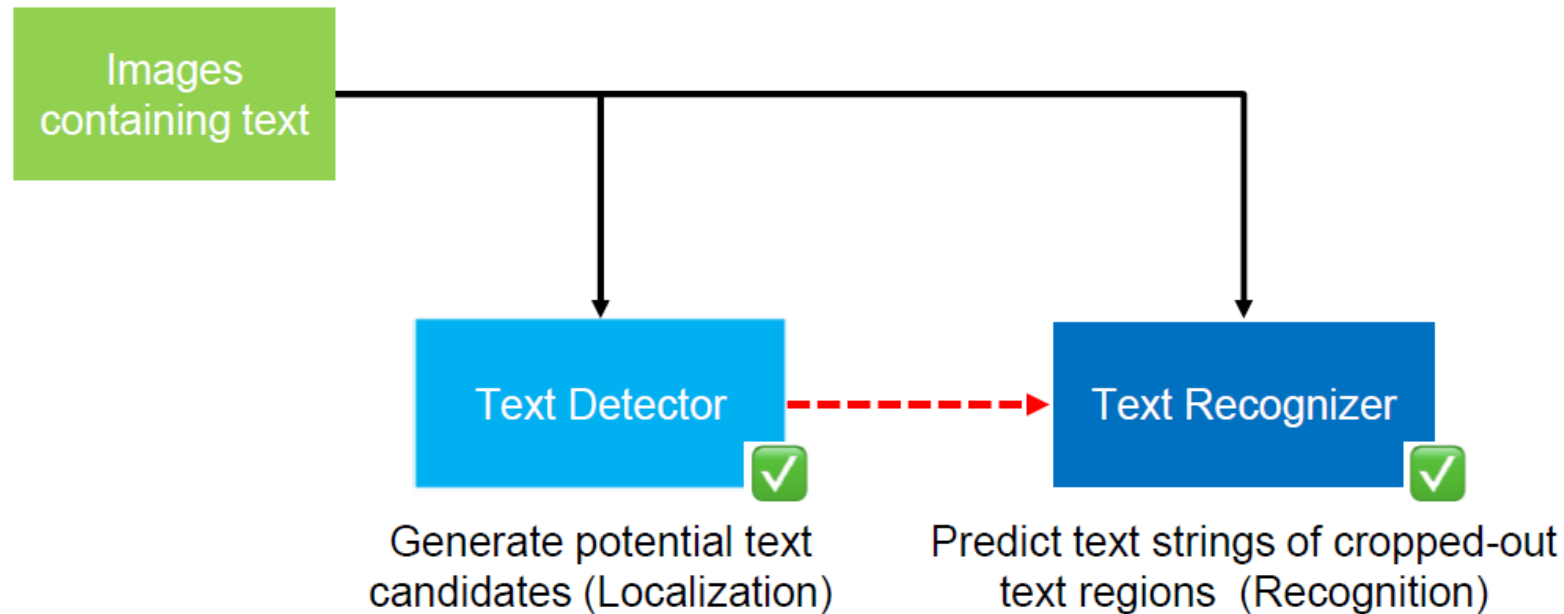

Truck Video Frames

Commodity Monitoring Architecture

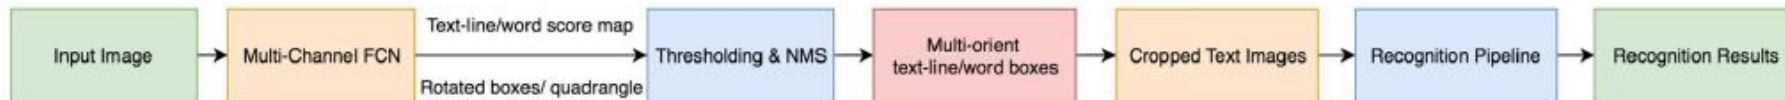

Text Recognition – Two Key Components

✓ Finished ✘ On-going

Logo Recognition – Text Detection

The developed algorithms can achieve a high recall with a competitive recognition accuracy.

Logo Recognition Solutions

- 1. Logo Detector with Fixed Classes** – Collect many training samples of the same logo in different angles and train the detector for this certain logo class.

Advantage: Simple model design. Great if users already know logos/brands and intentionally ignore others.

Disadvantage: Model cannot localize and recognize unseen logo images not belonging to a predefined class. Need to retrain the model when new logo classes are discovered/added.

- 2. Universal Logo Detector (with k-nearest neighbors)** – Adds bounding boxes to suspected logos within image samples. Crops bounding logos and runs them through ULD, with the finalization through KNN to get the best search results.

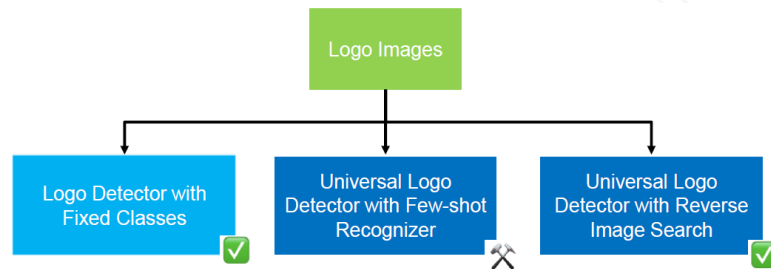

Advantage: Is a generic logo detector that can detect any potential logo imagery.

Disadvantage: Need to manually annotate samples for each class. Limited training samples yield unsatisfactory results.

- 3. Universal Logo Detector (with Reverse Image Search)** – Reverse image search is a content-based image retrieval query technique where a sample image is used to search related concepts about this image. It allows users to search for related images just by uploading an image or image URL.

Advantage: It can return reasonable results with richer meta data related to the logo imagery.

Disadvantage: Maintenance costs associated with HTML Parser API changes based on Google hosting.

Logo Recognition – Selected Solution

Project team settled on combining the cropping feature in Solution 2 with the Reverse Image look-up from Solution 3.

Once truck images were input into their Universal Logo Detector, they are able to estimate the location for each potential logo within each image. The cropped out logo regions enable the model to focus on pure logo content information and ignores non-relevant background noise/distraction information.

Next Steps

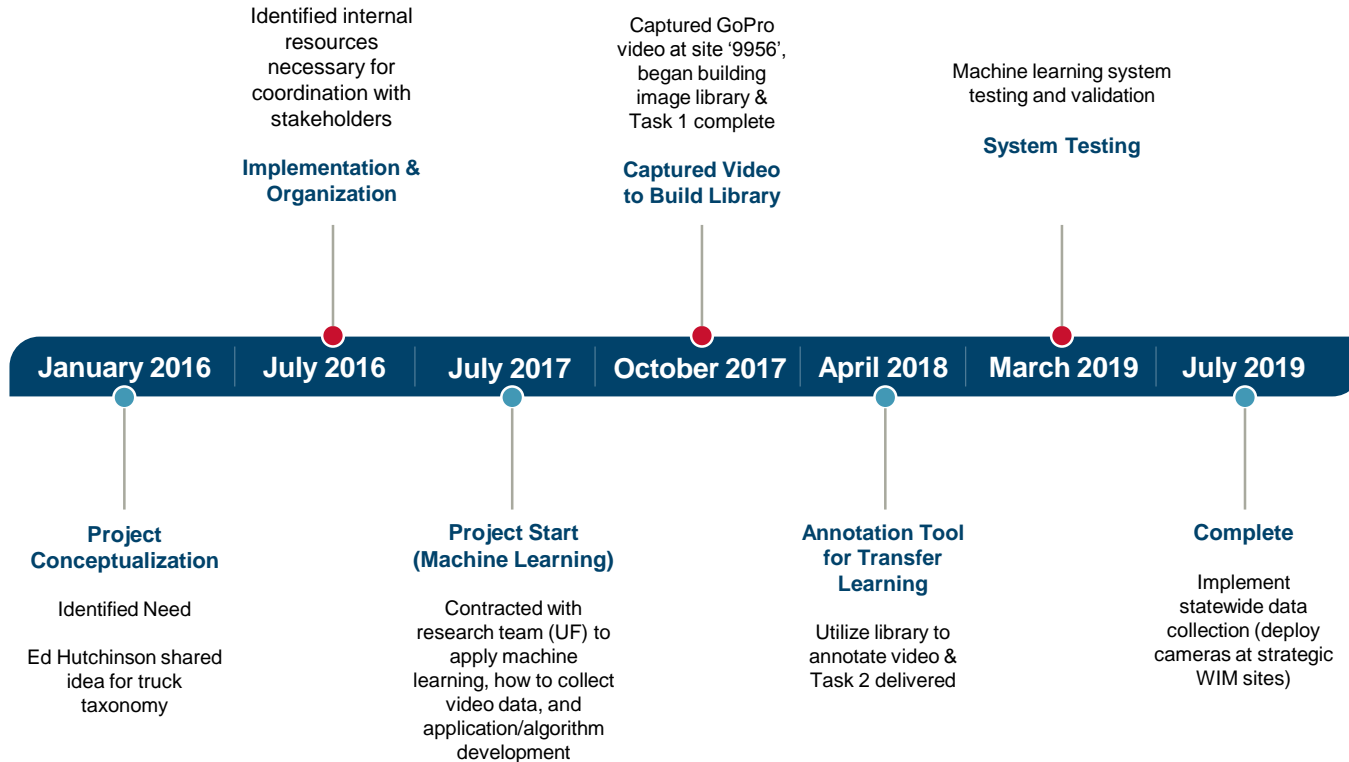

Project Challenges

1. Efforts to capture commercial vehicle configurations will be labor intensive.
2. Determine technical requirements along with hardware requirements early.
3. Implementation opportunities are still undetermined.
4. Public perspective of the system will be challenge.
5. Data management and governance considerations – Is the Department willing to develop and maintain a policy on this system?

Future Steps

1. Collect and annotate more data to increase potential for more successful results.
2. Purchase and install video equipment at WIM stations statewide (20+ locations), in order to acquire more location specific data.
3. Build a database that incorporates crosswalks with other commodity code systems (*North American Industry Classification System (NAICS)/Standard Industrial Classification (SIC)*)
4. Integrate existing algorithms into the YOLO annotation tool.
5. Solicit support of private sector capabilities and systems.
