## Contents: Volume I

### OPENING SESSION

### INSPECTION AND DATA COLLECTION

Bridge Inspection Decision Making Using Sequential Hypothesis Testing Methods, Samer M. Madanat and DaJie Lin, *University of California, Berkeley* (IBMC99-001) .......................................................... B-2

Segmental Inspection for Improved Condition Reporting in BMS, George Hearn, *University of Colorado at Boulder* (IBMC99-032) .......................................................... B-3

Use of Field Testing in Delaware’s Bridge Management System, Michael J. Chajes and Harry W. Shenton, *Illinois University of Delaware*, and Dennis O’Shea, *Delaware Department of Transportation* (IBMC99-041) .......................................................... B-4

Reengineering the Bridge Inspection Process to Enable a Knowledge Management Solution, Frank P. DiCesare, *Merrill Clark, Inc.*, and Paul Demers, *GIS/Trans, Ltd.* (IBMC99-014) .......................................................... B-5

Climbing Techniques for Bridge Inspection, Stephen Sabs, *California Department of Transportation* (IBMC99-019) .......................................................... B-6

Evaluation of Rebar Corrosion in Concrete by Active Thermal Sensing, Dana E. Poulain, Dennis R. Alexander, and Joseph K. Krause, *University of Nebraska-Lincoln* (IBMC99-027) .......................................................... B-7

In-Depth Inspection of Arizona’s Steel Bridges, Mark E. Bernhardt, *Burgess & Niple, Ltd.* (IBMC99-039) .......................................................... B-9

### CONDITION DETERIORATION MODELS
NDE in Bridge Management Systems, George Hearn, *University of Colorado at Boulder* (IBMC99-003) .......................................................... C-1

Analysis of BMS Reference Bridges in Finland, Marja-Kaarina Söderqvist, *The Finnish National Road Administration* (IBMC99-056) .......................................................... C-4

An In-Depth Analysis of the National Bridge Inventory Database Utilizing Data Mining, GIS and Advanced Statistical Methods, Steven B. Chase and Edgar P. Small, *Federal Highway Administration*, and Chris Nutakor, *GIS Trans* (IBMC99-047) .......................................................... C-6

### USER AND LIFE-CYCLE COST FACTORS

Contents: Volume II

BMS DEVELOPMENT AND APPLICATION
Optimization of Infrastructure Systems Maintenance and Improvement Policies, Frederick Guignier and Samer M. Madanat, University of California, Berkeley (IBMC99-002)................................................................. E-1
Bridge Management System Development for Municipal-Sized Inventories in Western Canada, Gary Krikiak, Reid Crowther & Partners, Ltd., Canada (IBMC99-035)............................................................... E-3
Examination of Alternative Strategies for Integration of Seismic Risk Considerations in Bridge Management Systems, Edgar P. Small, Federal Highway Administration (IBMC99-044)......................................................... E-4
TRUCK Bridge Rating Software, Zoran Despot and Rade Hajdin, Dr. J. Grob & Partner AG, Switzerland (IBMC99-050) ........................................................................................................................................... E-5
BRIDGIT: User-Friendly Approach to Bridge Management, Hugh Hawk, National Engineering Technology Corporation, Canada (IBMC99-072) ........................................................................................................................................... E-7

APPROACHES TO BRIDGE MANAGEMENT
Distinctive Features of the Swiss Road Structures Management System, Hannes Ludescher and Rade Hajdin, Dr. J. Grob & Partner Ltd., Switzerland, and Swiss Federal Institute of Technology (IBMC99-049).................................................................................................................... F-1
Network-Level Bridge Management Systems for National Road Administrations, Dmitry Gurenich and Nicholas J. Vlahos, Cambridge Systematics, Inc. (IBMC99-059) ........................................................................................................................................... F-2
Inspection, Monitoring, and Priority-Ranking of Bridges, Erik Stoklund Larsen, COWI Consulting Engineers and Planners, Denmark, and Jørgen Holst, Danish Road Directorate (IBMC99-062)........................................................................................................................................... F-3
Enhancements of the Project Selection Module of the Indiana Bridge Management System, Kumares C. Sinha, Purdue University, Robert E. Woods, Indiana Department of Transportation, and Yong Zhang, Purdue University (IBMC99-007)........................................................................................................................................... F-4
Finnish Project Level Bridge Management System, Marja-Kaarina Söderqvist, The Finnish National Road Administration, and Magnus Veijola, Inframan, Ltd., Finland (IBMC99-055)........................................................................................................................................... F-5
The New Ontario Bridge Management System, Paul D. Thompson, Consultant, Tony Merlo, Ontario Ministry of Transportation, and Brian Kerr, Alan Cheetham, and Reed Ellis, Stantec Consulting, Ltd., Canada (IBMC99-010)........................................................................................................................................... F-6

OPTIMIZATION AND DECISION SUPPORT
Integration of Maintenance, Repair, and Replacement Decisions in Bridge Management Based on Reliability, Optimization, and Life-Cycle Cost, Dan M. Frangopol, Michael P. Enright, and Allen C. Estes, University of Colorado, Boulder (IBMC99-003) ........................................................................................................................................... G-1
Integration of Reliability-Based Assessment Techniques into an Advanced BMS, Katja D. Flaig and Robert J. Lark, Cardiff University, United Kingdom (IBMC99-066)........................................................................................................................................... G-3

SYSTEM COMPONENTS AND IMPLEMENTATION ISSUES
Integrating Bridge Management Systems into the Business Process and Software Environment of the State DOT: Three States’ Experiences, Solon F. Blundell, Cambridge Systematics, Inc., Jerry Smith, Mississippi Department of Transportation, Robert Kelley, Michigan Department of Transportation, and Michael B. Johnson, California Department of Transportation (IBMC99-037)........................................................................................................................................... H-1
Expert Functions in Bridge Management Systems, Jan Bięń, Wroclaw University of Technology, Poland (IBMC99-026) ........................................................................................................................................... H-3
PROJECT AND NETWORK ACTIVITIES

Project Selection Method Integrating BMS Data and Nondeterioration Based Needs, Bruce Johnson, Federal Highway Administration, and Frank J. Nelson, Oregon Department of Transportation (IBMC99-070) ........................................................................ I-2

TxDOT’s Approach for Selection and Programming of Bridge Program Projects, Ralph K. Banks, Texas Department of Transportation (IBMC99-008) ........................................................................................................ I-3

Project Level Planning Using Pontis Results, Kevin G. Anderson and Paul M. Kivisto, Minnesota Department of Transportation (IBMC99-052) ................................................................................................ I-4

Bridge Management—Routine Maintenance: Recent Experience with the Routine Management Module in the DANBRO Bridge Management System, Arne Henriksen, Ministry of Transport, Denmark (IBMC99-021) .......................................................................................... I-5

LONG-TERM PLANNING AND ASSET MANAGEMENT

Integration of Bridge and Pavement Management Systems: A Proposed Strategy for Asset Management, Edgar P. Small, Federal Highway Administration, and Myron Swisher, Colorado Department of Transportation (IBMC99-045) .................................................................................................................... J-1

LOAD RATING AND PERMIT VEHICLE ROUTING

BMS for Permit Vehicle Routing in Spain, Joan R. Casas, Angel C. Aparicio, and Gonzalo Ramos, Technical University of Catalunya, and Agustin Sánchez-Rey, Spanish Ministry of Public Works, Spain (IBMC99-013) ...................................................................................................................... K-2

The Application of Groupware Software Systems to Permit Vehicle Routing, Terry D. Leatherwood, Tennessee Department of Transportation (IBMC99-068) ..................................................................................................................... K-3

Load Rating and Permit Vehicle Routing, Mark Nord, Colorado Department of Transportation, and George Hovey, InMotion, Inc. (IBMC99-058) ................................................................................................................... K-5
