

# Collecting and Monitoring Arterial Travel Times from Wireless Solar Powered RFID Readers

*North American Travel Monitoring Exposition & Conference – Seattle, WA*

*Jeffrey Wojtowicz*

*June 24, 2010*

Rensselaer

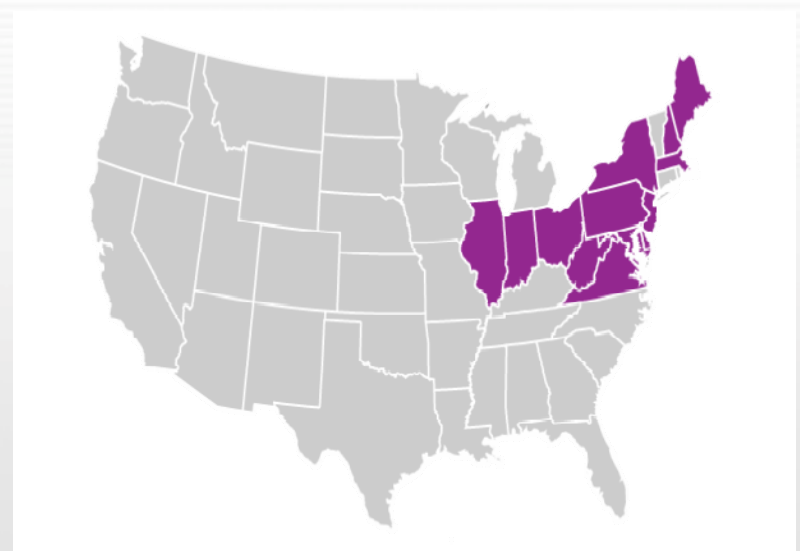

# Project Purpose

- Demonstrate that a wireless, solar powered, non-intrusive tag reader is a viable solution for field deployment.
  
- Demonstrate this technology could be used for traffic management for:
  - ❖ Local arterials
  - ❖ Special events
  - ❖ Work zones
  
- Reduce dependence on power and wired telecommunication access

# RFID Technology

- RFID technology for tolling and traffic management in the USA
- E-ZPass<sup>sm</sup> tag technology
  - ❖ Used for toll collection in 14 northeast states
  - ❖ Typically windshield mounted
  - ❖ Over 21 million tags on the road

# General Concept

**Computed Travel Time**  
Time = 10:00 AM  
**= 4 minutes**

Time = 10:04 AM

# Real – Time Tag Data

	STATION ETTM_6	→	STATION ETTM_1
LAST READ	1/21/2008 7:13 AM		1/13/2008 11:46 AM
BATTERY %	100		80
TOTAL READS	17084		7699
AVG TRAVEL TIME		116.85 seconds	
TRAVEL DISTANCE		1.1 mi.	
AVG TRAVEL SPEED		33.89 MPH	
NORMAL TRAVEL SPEED		35 MPH	
# RECORDS INCLUDED IN ANALYSIS		466	

	STATION ETTM_6	→	STATION ETTM_3
LAST READ	1/21/2008 7:13 AM		1/22/2008 11:30 AM
BATTERY %	100		100
TOTAL READS	17084		34171
AVG TRAVEL TIME		204.6 seconds	
TRAVEL DISTANCE		2.1 mi.	
AVG TRAVEL SPEED		36.95 MPH	
NORMAL TRAVEL SPEED		35 MPH	
# RECORDS INCLUDED IN ANALYSIS		7594	

	STATION ETTM_2	→	STATION ETTM_5
LAST READ	1/22/2008 11:30 AM		1/18/2008 2:56 AM
BATTERY %	100		100
TOTAL READS	29517		6808
AVG TRAVEL TIME		229.46 seconds	
TRAVEL DISTANCE		2.2 mi.	
AVG TRAVEL SPEED		34.52 MPH	
NORMAL TRAVEL SPEED		35 MPH	
# RECORDS INCLUDED IN ANALYSIS		1938	

# Deployment Locations

- NY Route 4 – Troy, NY
  - ❖ Deployment conditions
    - ❖ Local arterials
  - ❖ Dates:
    - ❖ July 2007 – August 2007
    - ❖ Sept 2007 – Feb 2008

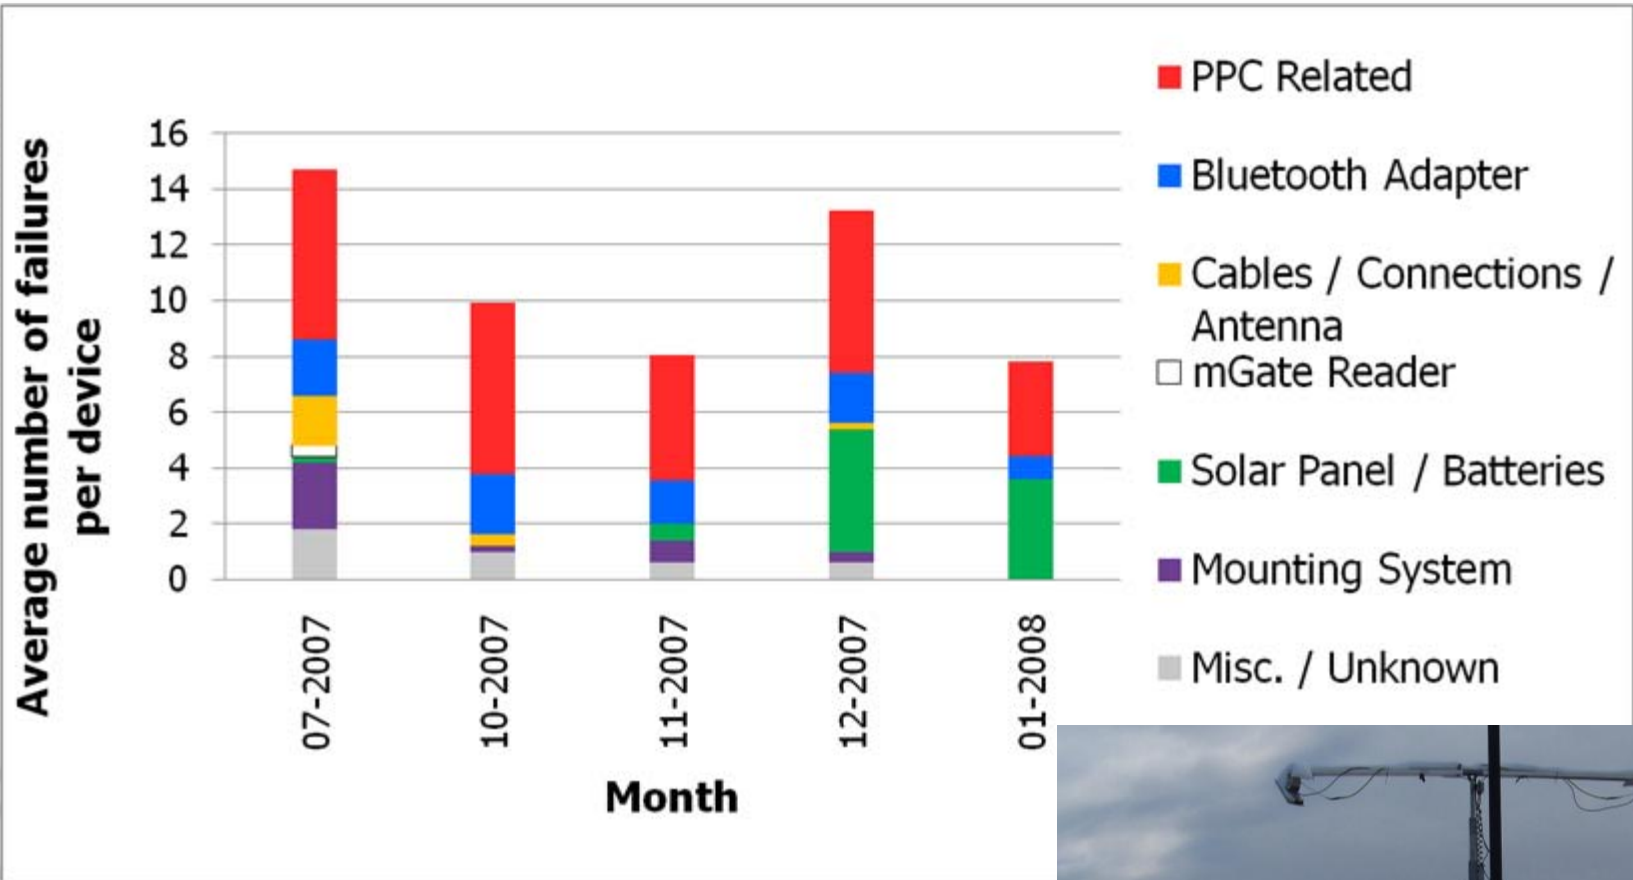

- New York State Fair – Syracuse, NY
  - ❖ Deployment conditions
    - ❖ Local arterials
    - ❖ Planned special event
    - ❖ Interstate work zone
  - ❖ Dates:
    - ❖ August 2007
    - ❖ August 2008

# Device Performance

# Device Performance Summary

- 90 – 95% tag read reliability (single lane).
- Vehicle travel time was published to website less than 1 minute after a vehicle passed a pair of readers.
- On average a device operated for 38 consecutive hours before experiencing a shut down.
  - Pocket PC was the most problematic component.
- The solar components were able to power all the devices for much of the study even during cloudy, rainy, icy, snowy days.

# TRAVEL TIME MONITORING

# Travel Time Monitoring

## Route 4 Northbound Travel Times Reader 2 to 5

# Travel Times at the NYS Fair

# Sensor to Sensor Travel Times

# Conclusions

- Prototype device was successful
- Green technology
  - Wireless & solar powered to aid in network observation
- Device reliability
  - ❖ 90%+ tag read reliability
- Traffic management:
  - ❖ Travel time information provides great insight into network conditions
  - ❖ Portable for planned special events and work zones
  - ❖ Complement existing traffic data collection or deploy at locations where traffic data is not being observed
