

# Traffic Safety Barriers to Walking and Bicycling

Analysis of CA Add-On Responses to the 2009 NHTS

NHTS Users Conference—June 2011

Robert Schneider, Swati Pande, & John Bigham, University of California Berkeley  
Safe Transportation Research & Education Center (SafeTREC)

# Community Goals vs. Perceived Pedestrian & Bicycle Safety Barriers

- **Goal: Increase walking & bicycling**
  
  
  
  
  
  
  
  
  
  
- **Goal: Improve pedestrian & bicycle safety**

# Community Goals vs. Perceived Pedestrian & Bicycle Safety Barriers

- **Goal: Increase walking & bicycling**
  - “If there was less traffic...I would probably walk even more.”  
--Male, Age 30, San Francisco Fillmore Street
  - “Bicycling itself...I would do it if I wasn’t right up next to cars.”  
--Female, Age 52, South SF
- **Goal: Improve pedestrian & bicycle safety**
  - “There are definitely certain intersections that I’m very cautious about because I have seen drivers do crazy things...”  
--Female, Age 52, South SF
  - “Sometimes I feel scared for [bicyclists]...sometimes it is very hard to see them...and sometimes they have no protection.”  
--Male, Age 30-39, Berkeley

# Dependent Variables

- Walk “Traffic Safety” Barrier factor score
  - Too many cars
  - Street crossings unsafe
  - Fast traffic
  - Streets too wide
  - Air pollution
- Bicycle “Traffic Safety” Barrier factor score
  - Fast traffic
  - Street crossings unsafe
  - Too many cars
  - Not enough light
  - Have enough time

# What Characteristics are Associated with Perceived Pedestrian & Bicycle Safety Barriers?

# Conclusions

- NHTS travel behavior & socioeconomic data improves understanding of traffic safety barriers and suggests comprehensive set of interventions
  - Major roadways, population density  
→ slower automobile speeds, mode shift strategies
  - Utility travel, more walk trips, fewer bike trips  
→ “Complete Streets” for all modes
  - Disabilities, female, minority, low-income, more kids  
→ accessibility improvements, Safe Routes to School, targeted education & encouragement

# Considerations & Future Research

- Greater understanding of barriers to people who already walk & bike, *but not people who don't*
- Not all major roads are alike
- Could analyze respondent tours
- Could ask more detailed questions about traffic safety barriers instead of factor analysis
- Need more research on perceived vs. actual pedestrian & bicycle safety risk
