# System Solution – Measuring Freight System Performance with Supply Chain Fluidity Measures

- Objective
  - Demonstrate and improve the measurement of freight transportation performance using a supply chain perspective
- Case Study Sponsors
  - U.S. Department of Commerce, Advisory Committee on Supply Chain Competitiveness
  - FHWA, Office of Freight Management
  - I-95 Corridor Coalition, Intermodal Committee

*UNITED STATES*  
**DEPARTMENT OF TRANSPORTATION**

## Supply Chain Case Studies

- Retail – Target® consumer goods
  - From Ports of Los Angeles/Long Beach via Chicago to New York
- Autos – General Motors auto parts
  - From suppliers to auto assembly plant in Tennessee
- Food – Perdue processed chicken
  - From DelMarVa region to Mid-Atlantic markets
- Agriculture – Soybean exports
  - From Illinois farms to Louisiana port
- Electronics – Panasonic electronics
  - Between manufacturing and assembly facilities in San Diego and Tijuana

# UNITED STATES DEPARTMENT OF TRANSPORTATION

## Scope

- Address performance of supply chains
  - But not the performance of modes, networks, etc., or environmental and economic impacts
- Address performance of public and quasi-public links and nodes
  - Include ports, highways, rail lines, airports, etc., but not private-sector manufacturing, warehousing or distribution nodes
- Use measures and metrics that are common across supply chains and “drill down”
- Focus on high-level performance of representative supply chains to inform national policy
  - Cover key industries, national regions, major trade lanes, but do not duplicate firm-, carrier- and agency-level analysis

UNITED STATES  
DEPARTMENT OF TRANSPORTATION

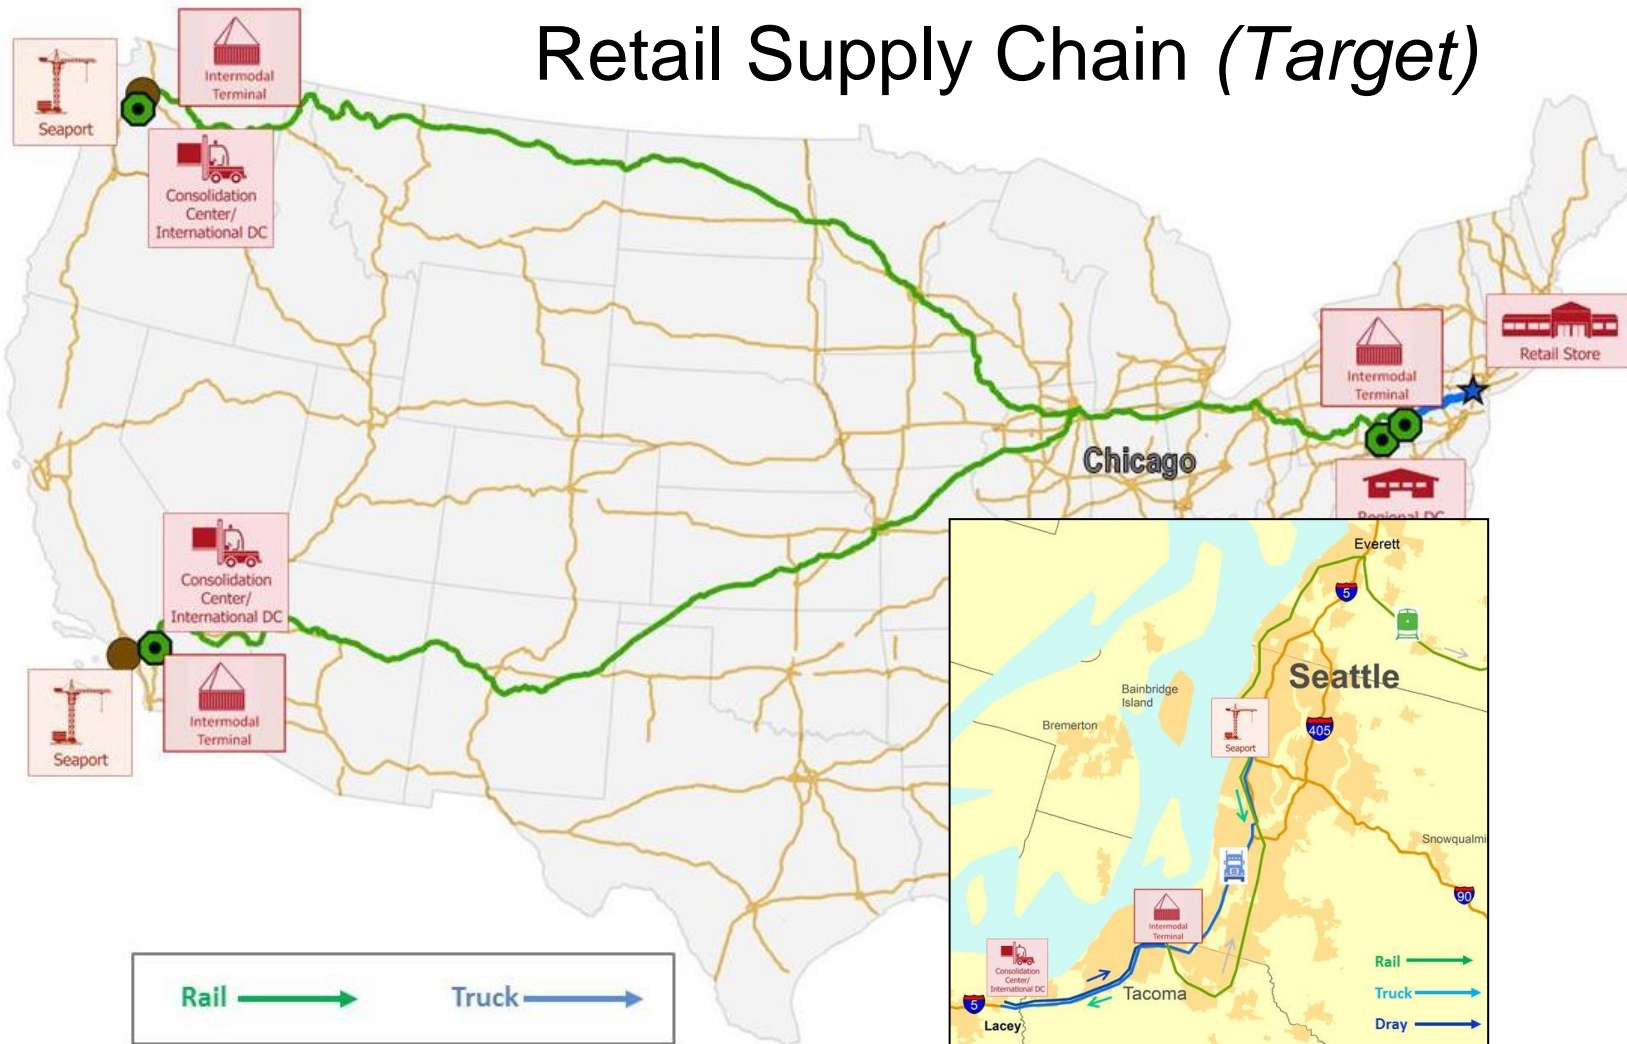

## Performance Measures and Metrics

<b>Measure</b>	<b>Metric</b>
Transit time	Travel time in days (or hours)
Reliability	95% travel time in days (or hours)
Safety	Fatality and injury rate
Cost	Dollars
Risk	Cargo loss and damage <i>(accidents, poor handling, theft...)</i>
	Disruption <i>(storms, labor, political forces...)</i>
	Capacity expansion delays <i>(physical, regulatory limitations and delays...)</i>

# UNITED STATES DEPARTMENT OF TRANSPORTATION

## Retail Supply Chain (*Target*)

UNITED STATES  
DEPARTMENT OF TRANSPORTATION

# Retail Supply Chain Measures

Links and Nodes	Transit Time/Dwell Time (Hours)	Reliability (95% travel time)
<i>West Coast port (SEATTLE)</i>		
Dray move	1.1	4.3
<i>Transload or Consolidation Center</i>		
Dray move	0.8	3.3
<i>West Coast rail intermodal terminal</i>		
Rail move		
<i>Midwest rail intermodal interchange</i>		
Rail move		
<i>East Coast rail intermodal terminal</i>		
Dray move	1.0	2.7
<i>East Coast Regional Distribution Center</i>		
Truck P&D move	3.5	6.5
<i>Retail Store</i>		
<b>Totals</b>		

UNITED STATES  
DEPARTMENT OF TRANSPORTATION

# Retail Supply Chain Measures

Links and Nodes	Transit Time/Dwell Time (Hours)	Reliability (95% travel time)
<i>West Coast port (LA/LB)</i>		
Dray move	1.2	5.8
<i>Transload or Consolidation Center</i>		
Dray move	0.3	1.3
<i>West Coast rail intermodal terminal</i>		
Rail move		
<i>Midwest rail intermodal interchange</i>		
Rail move		
<i>East Coast rail intermodal terminal</i>		
Dray move	1.0	2.7
<i>East Coast Regional Distribution Center</i>		
Truck P&D move	3.5	6.5
<i>Retail Store</i>		
<b>Totals</b>		

# UNITED STATES DEPARTMENT OF TRANSPORTATION

## Agricultural Export Supply Chain (soybeans)

UNITED STATES  
DEPARTMENT OF TRANSPORTATION

# Agricultural Export Supply Chain Measures

<b>Links and Nodes</b>	<b>Transit Time/Dwell Time</b> <i>(Days, hours)</i>	<b>Reliability</b> <i>(95% travel time)</i>
<i>Farm in vicinity of El Paso, IL</i>		
Truck move	0.8 hours	1.7 hours*
<i>ADM/Growmark Peoria Terminal Wharf Port Facility</i>		
Barge move	8.2 days	14.5 days*
<i>Cargil Loading Facility, Reserve, LA</i>		
<b>Totals</b>	<b>9.0 days</b>	<b>14.6 days</b>

\* Estimated using U.S. Army Corps of Engineers data for the period June 2012 through January 2014; TTI Mobility Report 2012 for 95% index for small urban areas.

## Conclusions and Issues *(preliminary)*

- We can measure the high-level performance of representative supply chains
- Key measures and metrics are common across supply chains and can be scaled for national, multistate and metropolitan use
  - Travel time and travel time reliability are available from public and private sources, but “some assembly is required...”
  - Safety data are available, but not readily accessible
  - Cost data can be purchased from private suppliers
  - Risk data can be estimated, but are not readily available
- Data availability, access and cost
- Urban freight stages
- Representative market basket of supply chains
  - How much is enough?
    - Industries, supply chains, geographies, etc.

## **Operational Solutions - Freight Advanced Traveler Information (FRATIS)**

- **Technology is not used consistently by the trucking industry**
- **Trucks have unique operational characteristics**
- **Freight terminals do not always share queue information**
- **Existing public resources do not always provide freight-specific information**
- **System effectiveness is often limited by data availability and accuracy**

UNITED STATES  
DEPARTMENT OF TRANSPORTATION

***The lack of Freight Advanced Traveler Information has negative effect on:***

- **Efficient Movement of Freight Transportation**
- **Planning of freight daily work activities**
- **Logistics Management Systems**
- **Environment of Neighboring Communities**
- **Energy Consumption**
- **Safety of the Traveling Public**

## Los Angeles/Long Beach Port User Survey Responses

Truck Drivers get their traveler information from a variety of traditional and technology based sources:

# UNITED STATES DEPARTMENT OF TRANSPORTATION

## Los Angeles/Long Beach Port User Survey Responses

### Truck Drivers use traveler information to make key decisions:

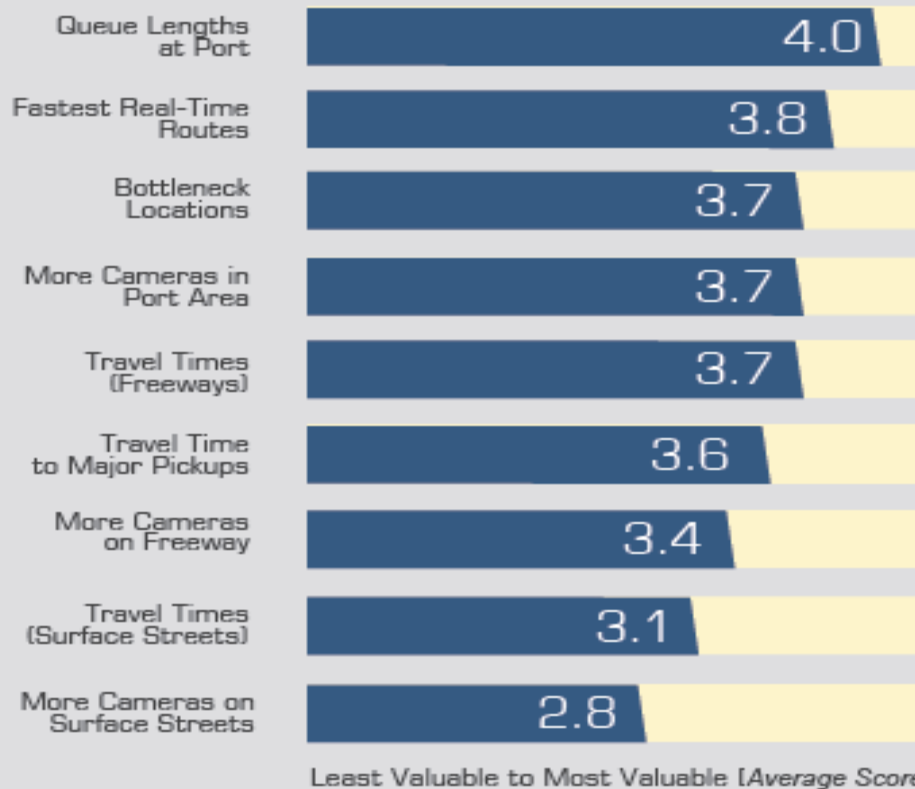

# UNITED STATES DEPARTMENT OF TRANSPORTATION

## Los Angeles/Long Beach Port User Survey Responses

Dispatchers in the region rated the value of the following improvements to traveler information:

# UNITED STATES DEPARTMENT OF TRANSPORTATION

## Where are the Potential Port Locations for Application of FRATIS?

# Freight Advanced Traveler Information System (FRATIS): Concepts and Potential Impacts

- **FRATIS Application: Freight-Specific Dynamic Travel Planning and Performance**
  - Enhances traveler information systems to address specific freight needs
  - Integrates data on wait times at intermodal facilities (e.g. ports), incident alerts, road closures, work zones, routing restrictions (hazmat, oversize/overweight)

- **FRATIS Application: Drayage Optimization**
  - Optimize truck/load movements between freight facilities, balancing early and late arrivals
  - Individual trucks are assigned time windows for pick-up or drop-off
- **10-year transformative impact targets**
  - Reduce truck travel times, 17%
  - Reduce bobtail (empty) trips, 15%
  - Reduce terminal wait times, 35%
  - Reduce freight-involved incidents, 35%
  - Reduce fuel consumption/emissions, 10%

**FRATIS USDOT Lead: Randy Butler**  
(FHWA Office of Operations)

*UNITED STATES*  
**DEPARTMENT OF TRANSPORTATION**

## Benefits to Trucking/Drayage Company and Drivers

- Improve productivity and efficiency of the fleet
- Empower dispatchers with real-time information for faster and better decisions
- Generate near optimal trucks itinerary taking into consideration travel times with traffic, waiting times at the terminal, weather conditions, driver availability, etc.
- Dispatcher will have access to real time Terminal Waiting Times and Turn-Times
- Drivers will be able to navigate to their destinations and be rerouted in case of heavy traffic, incidents and congestion in their current route

*UNITED STATES*  
**DEPARTMENT OF TRANSPORTATION**

## Benefits to Intermodal Facilities

- Receive pre-notifications containing details for trucks coming to perform transactions in their facilities
- Receive real time notifications of trucks heading towards their facilities with estimated time of arrival
- Reduce waiting time and turn around time at the facility
- Reduce unproductive pickups/drop-offs by enabling better container turns and reuse.
- Communicate directly with dispatcher to notify about terminal closures, incidents, or any other operational status in order to mitigate congestion in their facilities.

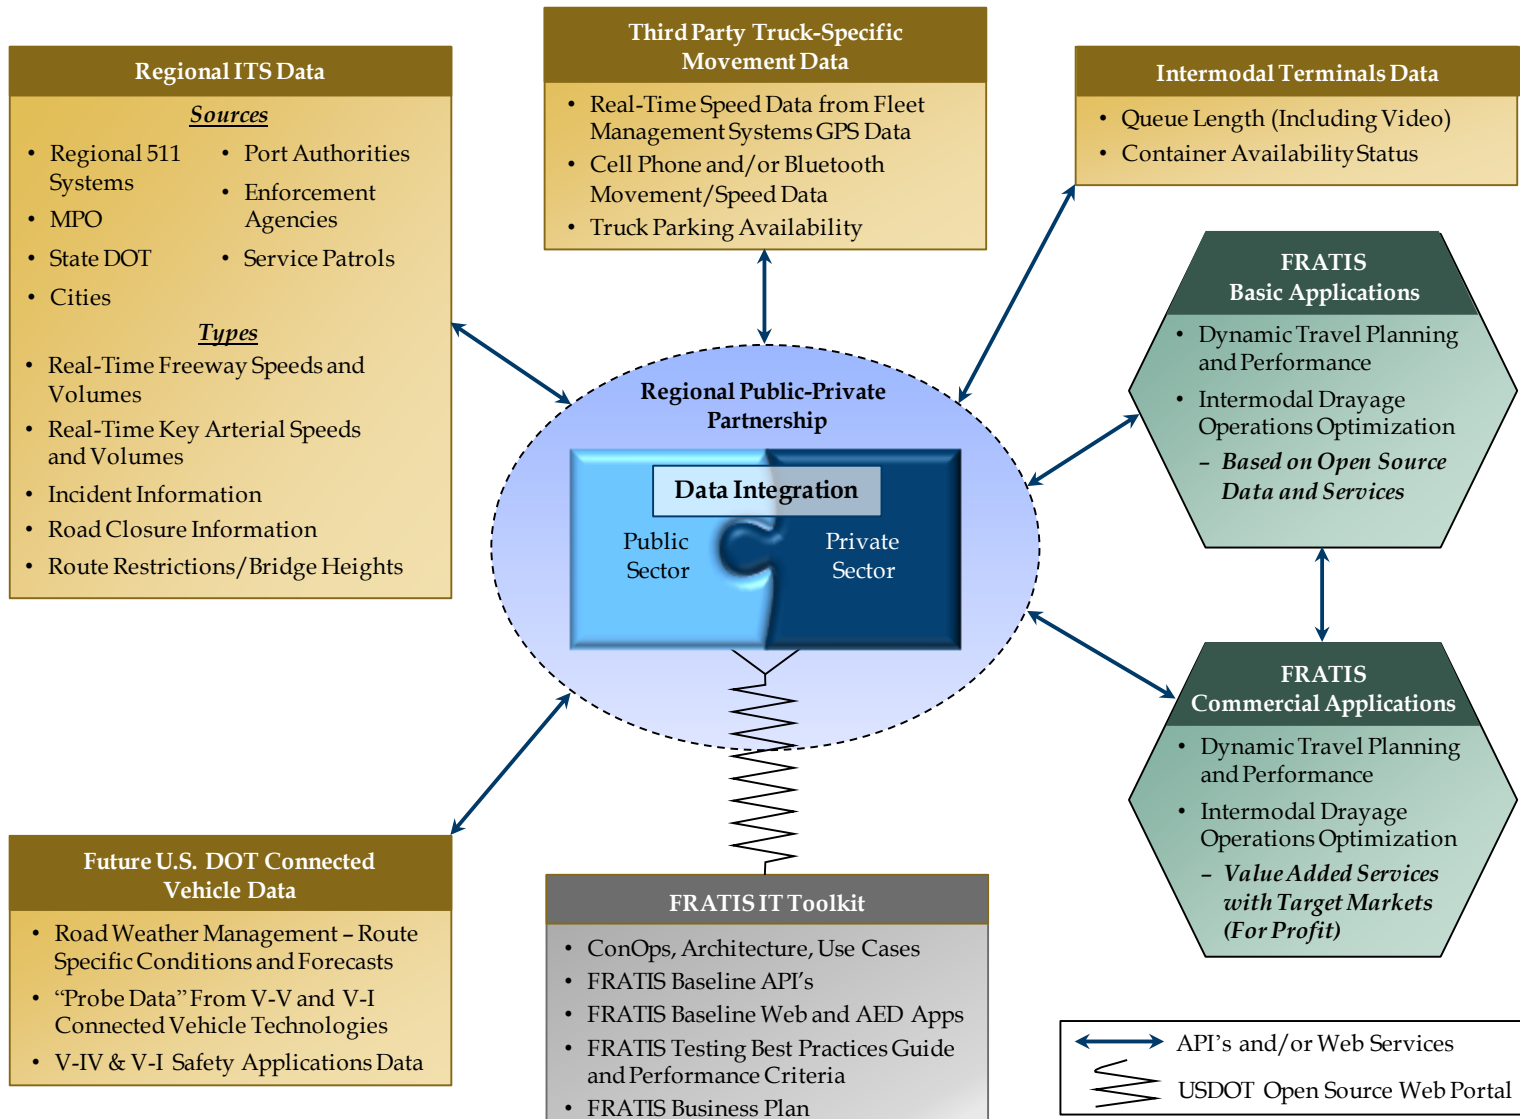

*UNITED STATES*  
**DEPARTMENT OF TRANSPORTATION**

## Public Benefits

- Promote better transportation planning and policy
- Improve air quality by reducing CO2 emissions
- Provides a platform to support economic development in the region
- Improve quality of life of the region
- Better utilization of existing infrastructure and capacity
- Provides capabilities for safer routes for trucking operations.

# FRATIS High-Level System Concept Focuses on Data Integration and Dissemination

# Planning Execution and Monitoring

- Capture Drayage Operation Constraints
- Receive and Enter jobs into FRATIS
- Run the optimization algorithm
- Generate optimal plan
- Review the optimal plan and approve
- Communicate the plan details
- Drivers receive and execute Jobs
- Monitor the daily operations

**UNITED STATES  
DEPARTMENT OF TRANSPORTATION**

## Memphis Drayage Optimization Algorithm

**Pre-deployment vs. Post-deployment pairwise comparison of average performance measures using clustered data sets:**

<b>Performance Measure</b>	<b>Pre vs. Post using clustered data sets</b>
<b>Bobtail Miles Reduction</b>	<b>13%</b>
<b>Total Miles Reduction</b>	<b>9%</b>
<b>Average Miles per Truck Increase</b>	<b>14%</b>
<b>Required Fleet Size Reduction</b>	<b>21%</b>

*UNITED STATES*  
**DEPARTMENT OF TRANSPORTATION**

# Three Initial FRATIS Prototypes Under Development

- **Los Angeles-Gateway Region:**

- Develop FRATIS applications to address dynamic travel planning around the marine terminals and queues to move cargo out of the ports more efficiently

- **Dallas-Fort Worth, Texas:**

- Incorporate integrated corridor management capability along with size and weight permitting
- Test Connected Vehicle Basic Safety Message (SAE Standards J2735-2009)
- Optimize drayage opportunities in coordination with rail and local truck drayage companies

- **South Florida:**

- Similar focus as the other two sites, but includes emergency response capability to FRATIS that would integrate FRATIS functionality into Emergency Operations Center activity during an emergency such as a hurricane

*UNITED STATES*  
**DEPARTMENT OF TRANSPORTATION**

## FRATIS Project Status

- FRATIS Prototype
  - Architecture Complete
  - Baseline data for before and after complete
  - Development of the Application Complete
    - External Traffic Information
    - Devices Installed in 50 trucks
    - Optimization Algorithm designed for Marine Terminal Operations
    - Waiting times will be collected to measure queues at the gates
- Los Angeles FRATIS went live on December 11, 2013
- Dallas live for six month test being February 28, 2014
- South Florida begin six month test on April 1, 2014
