

National Level Performance Measurement

David Winter

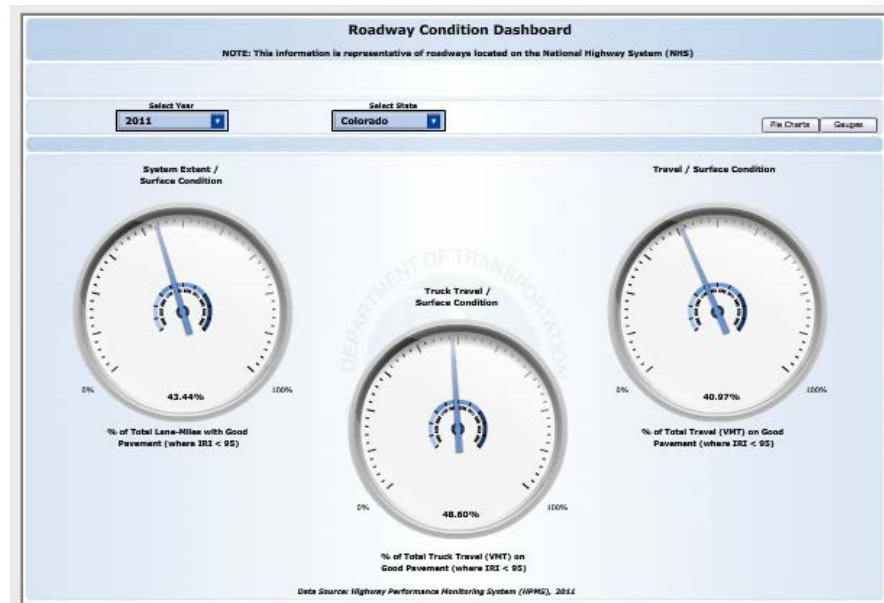

Office of Highway Policy Information, FHWA

Simple Measures...

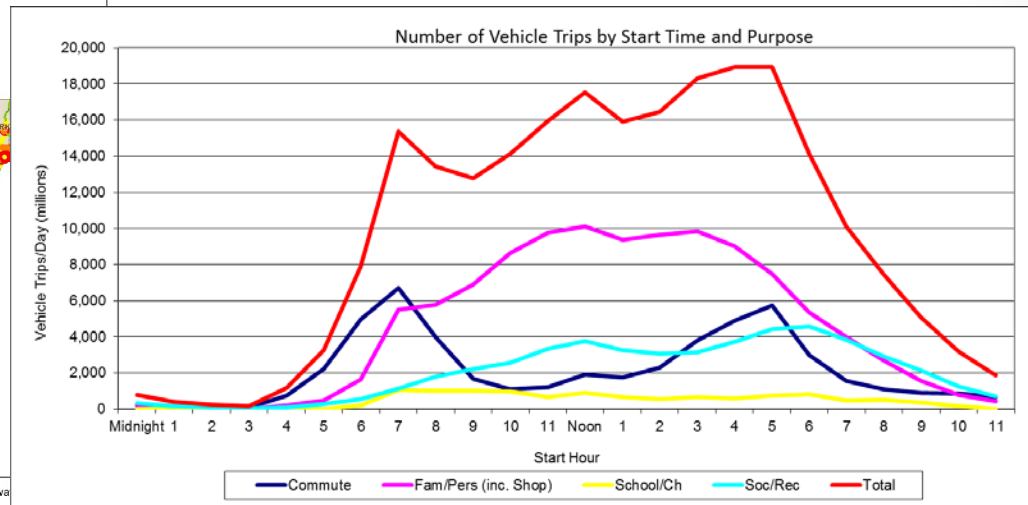

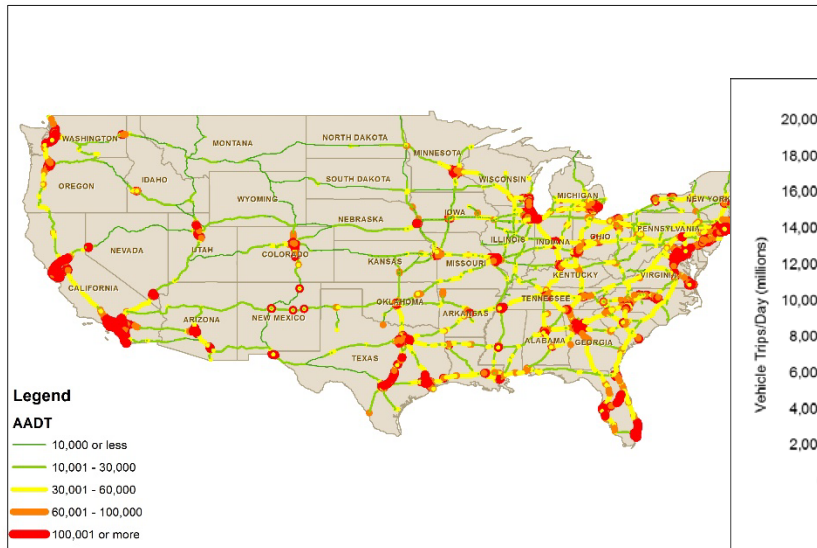

Initial 2013 HPMS Submittal

Year	Public Road Mileage	Lane Miles	VMT (in millions)
1980	3,859,837	7,922,174	1,527,295
1981	3,852,473	7,856,560	1,555,308
1982	3,865,894	8,012,913	1,595,010
1983	3,879,617	8,055,068	1,652,788
1984	3,891,464	8,076,149	1,720,269
1985	3,863,912	8,017,994	1,774,826
1986	3,877,941	8,048,512	1,834,872
1987	3,873,992	8,051,015	1,921,204
1988	3,870,744	8,048,008	2,025,962
1989	3,876,865	8,062,952	2,096,487
1990	3,866,926	8,051,081	2,144,362
1991	3,883,920	8,087,793	2,172,050

More Detailed Measures...

Produced by the Office of Highway Source: 2011 HPMS

April 19, 2013

National Performance Measures...

Current measures are:

- Interesting
- Somewhat informative
- Colorful

But...

- Do not tell the whole story
 - Year to year changes
 - Data quality and completeness
 - One dimensional - no correlation or causation
- Are not interactive
- For the most part are only available within FHWA

Data Quality - HPMS

Initial 2013 HPMS Submittal

Final 2013 HPMS Submittal

Data Quality - HPMS

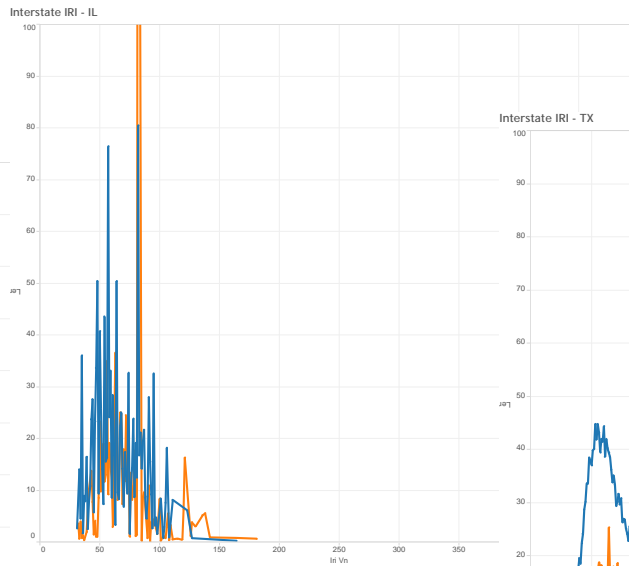

Data Quality – HPMS

Interstate Pavement Smoothness

Data Quality – HPMS Section Level Analysis

Data Quality – IRI

How Do We Address Gaps

- Exploring best practices – States and federal agencies
- Data governance – improve data consistency across systems
- Increased use of data quality report cards – timely feedback
- Exploring making HPMS a (partially) transactional system
- Moving public data to cloud
- Testing cloud for data submittal and analysis
 - HPMS
 - NBI
- Developing cadre of Data Scientists
 - Skills
 - Tools
 - Hardware

Data Visualization

- Data Visualization Center
 - On and off site contractors developing innovative ways to visualize data
 - Helping to develop better data analytics
 - Educating staff and building competency

TRAFFIC AND MILEAGE ON THE NATION'S INTERSTATES

1.8 MILLION MORE FEMALE DRIVERS THAN MALE DRIVERS

TRENDS IN NATIONAL BRIDGE CONDITIONS

Insert context, such as definition of structurally deficient, NHS, deck area, ratings, etc.

Percent of bridges rated good, fair, and poor (all bridges)

Source: NHDOT data source

All Road Network – ARNOLD

- Geospatial backbone for data programs:
 - HPMS
 - NBI
 - FMIS
 - GCIS
- Allows for easier data integration, spatial analysis and visualization
- Includes all public roads and dual carriageways
- Future efforts will focus on federal roads and privately owned public roads
- Census and USGS interested in using...

National Address Database

- U.S. DOT interested in supporting the development
- Strong national support
 - Various federal agencies
 - State and local governments
 - Private sector
- Will build upon data currently collected by states and locals
- FHWA role uncertain at this time
- Some interest in storing in or linking to HPMS and ARNOLD

Thank You!
