**S**canners

### Other usage

- Overheating equipment
- PM activity e.g. overloaded electrical panel
- Proving the 3<sup>rd</sup> rail heaters work from a safe distance and not disrupting service!
- Incorrect calibration
- Friction in machining
- Trespassing
- Combining with track geometry to predict premature rail aging
- The list goes on!.....

**Cleaning Monitoring System** 

## Requirements

Asset Management

Y=f(X)

Knowledge

Management

- MBTA has a penalty based cleaning contract
- Onus on the MBTA to prove a defect has occurred
- Paperwork leads to under utilization of personnel
- We are paying our personnel to do paperwork and not effectively manage the contract

### Bus Wash - Water Consumption Reduction Pilot

Problem Statement: - find ways of reducing the MBTA operating budget without effecting service delivery and be sustainable

Example:

- Water consumption of washing the 40ft bus fleet at Lynn Garage (pilot site) =
- 42.45 Gallons (avg per wash) x \$0.0188 x 75 (40ft busses) x 365 = **\$21,845** for the fleet annually, or **1,162,069 Gallons** 
  - Physical limitations –

Refueling / Fare Collection

### Bus Wash - Water Consumption Reduction Pilot

Problem Statement: - find ways of reducing the MBTA operating budget without effecting service delivery

#### Observations:

- Busses must be fueled!
- Busses seem to be washed a minimum of twice a day
- Triggers the bus wash when the bus does not need washing = waste of \$\$
- Bus wash does not turn off or have the ability to turn off when a bus approaches that has been washed
- MBTA Policy to wash buses only once a day or unless needed.
- MBTA has no active water reclamation system installed

#### **Results From Inital Pilot Test**

 Costing the MBTA a minimum of twice as much or \$43,690 and 2,324,138 Gallons

Y=f(X)

Knowledge Management

### Bus Wash - Water Consumption Reduction Pilot

Expected Savings (based on assumptions and validated data thus far):

Lynn Bus Garage

Fleet: 75 Buses
Annual consumption: 2,324,138 gallons
Annual Cost: \$43,694

**Minimum Annual Savings:** \$21,874 or 1,162,069 Gallons

<u>All Authority Bus Garages (theoretical</u> <u>minimum, for 40ft busses annually)</u>

11 Bus Garages
Fleet: 915 Buses
Annual consumption: 30.3M gallons
Annual Cost: \$570,359

**Minimum Savings:** \$285,179 or 15.2M Gallons

\*Numbers are based on estimates provided by MBTA Environmental Department

What do you do with the cost savings? – Invest in your system and find more ways to innovate!

Knowledge Management

### Bus Wash - Water Consumption Reduction Pilot

- Data Validate, Validate, Validate!!
- Assumptions for pilot
  - We are washing busses more than once
  - We are using 42.45 of gallons per bus to wash
  - Our bus wash instantly turns on and off with no redundancy
  - Potential of 50% savings in water consumption
  - Lynn Chosen as one of the smallest to trail the technology
  - Buses traveling through the bus was system per procedure
- How are we validating??
  - Intellah-Wash counts the busses going through the wash and the number of visits each bus makes
  - Flow meter to measure actual water flow and gallons used
  - Infield observations of the wash system
  - Verifying the cost data of the asset as a utility
  - Intellah-Wash system turns off bus wash automatically when bus has already been washed in 24 hours
    - Frequency and speed of travel of bus in the system

### MBTA – A System of Systems

All of this work would not have been possible without the cooperation of departments, stakeholders and teams across and outside the MBTA

Thank you to our partners inside and outside of our business...

We still have allot to do and more partners to work with!

### Thank you Any Questions? Satyen Patel, Director of Asset Management, SPatel@mbta.com
