Challenges and Barriers to Technology Implementation ... A Freight Rail Perspective

Notwithstanding the Challenges & Barriers ... Technology Helps Achieve Strategic Objectives

Tomorrow

Facilitating technology advancement in freight rail ... Alignment and Partnership will be key

Academia

- Continue innovation via Research & Development
- Ensure workforce readiness via rail-based curriculum

Regulatory

- Specify desired outcome, not how it should be achieved
- Balance regulation ... how much is too much?
- Invest in transportation beyond highways

Private Sector

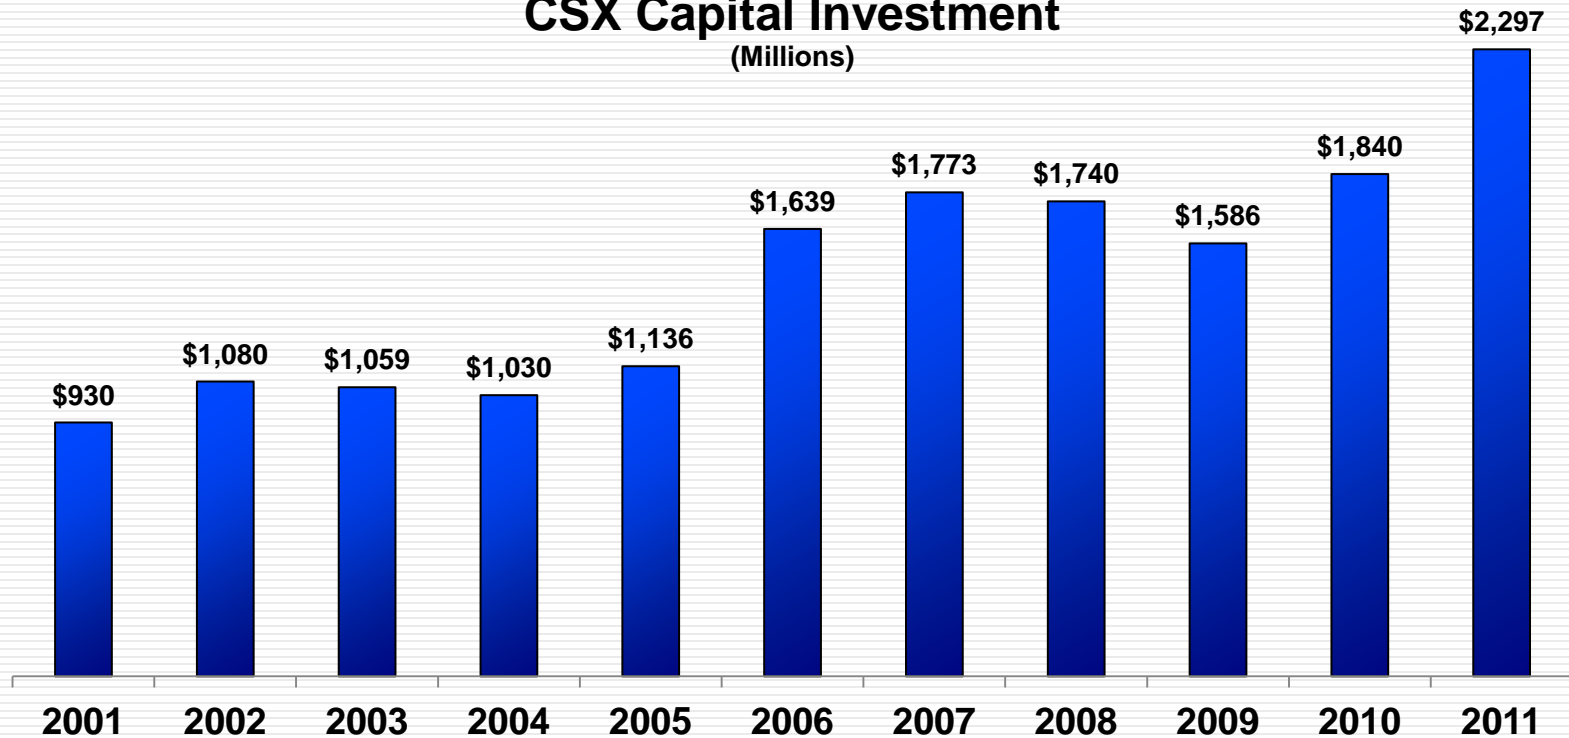

- Share best practices across transportation modes
- Realize that multi-modal transportation is a network of networks
 - And that “coopetition” may be the root of mutual success

Thank you TRB for sponsoring this forum to facilitate communication & innovation

Rail

Truck

Transportation Variables

Tons per Unit and Number of Units based on industry averages for commodity, weight and mode of transportation. Tons per unit may be customized, if desired.

Tons per unit Number of units

Distance

Origin or

Destination

Results	Approx. tons CO ₂
Your total approximate CO ₂ emissions:	1
For this shipment, if this cargo were shipped by truck only:	20
For this shipment, if this cargo were shipped by CSX rail only:	1

Shipping by CSX can reduce CO₂ emissions by approximately **18 tons** compared to shipping by truck.

That equals:*

CO₂ emissions from the electricity use of **1** homes for one year.

3 acres of pine forests absorbing carbon for one year.

Removing the greenhouse gas emissions of **3** passenger vehicles for one year.

Lowell Supersite

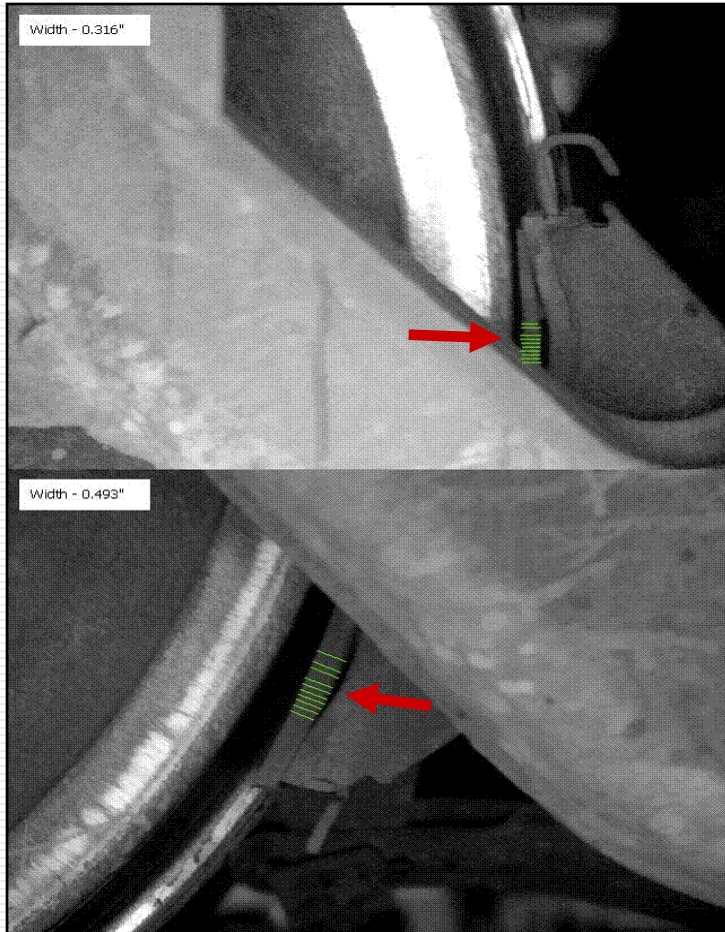

Railcar Wheel Profile

Vision systems provide 24/7 inspection & measurement

Current: Brake Shoe Measurement

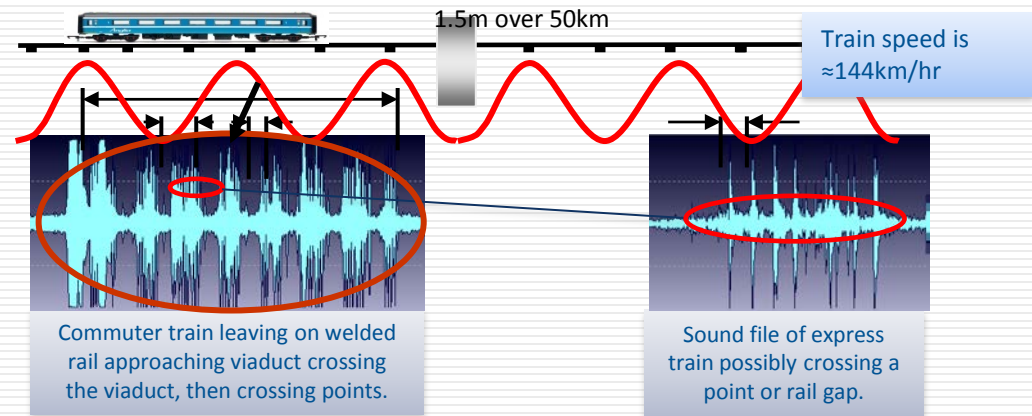

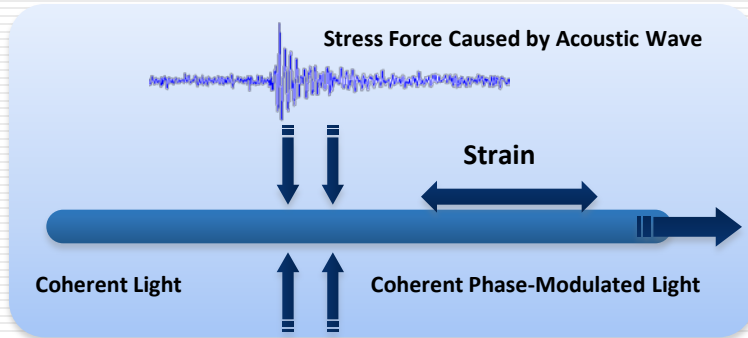

Future: Coupler Securement View

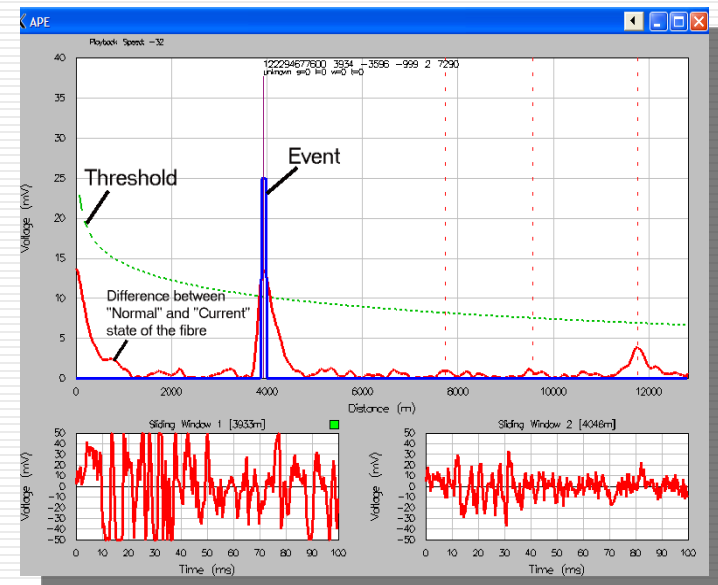

Wheel temperature using thermal vision

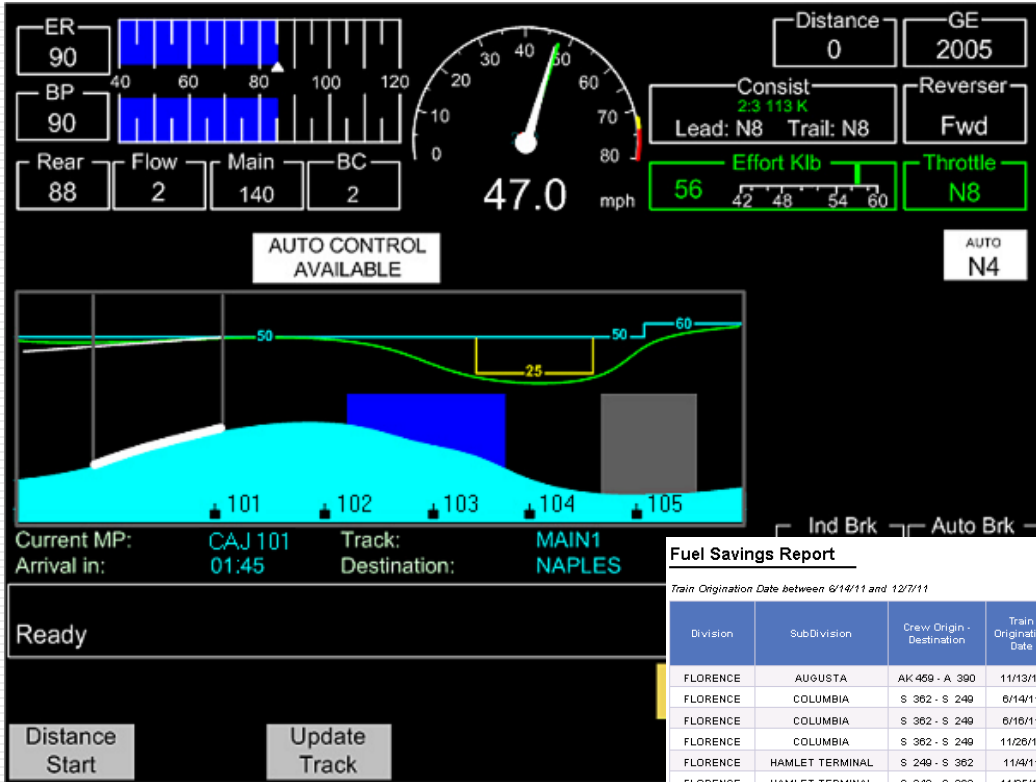

Distributed acoustic sensor using fiber optic cable

- Acoustic wave causes stress in the fiber cable
- Stress causes noise (vibrations) that can be followed as it moves along the railroad
- Unique noise signatures allows for route cause determination
- Signatures (algorithms) correlated to known events can identify:
 - Train presence, Flat Wheels, Broken Wheels, Dragging equipment, Broken Rail, & Hot Bearings
 - Signatures will be developed to identify these unique events by comparing Springfield Supersite events to Fiber Tests

Energy Management

Energy Management controls the throttle position to maximize fuel economy
