

Big Data and GIS

Visualization and Analysis Unleashed

Big Data and GIS

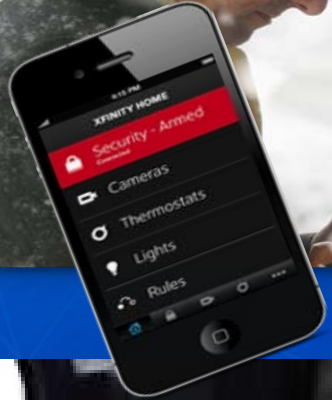

Visualization and Analysis Unleashed

**We Don't Need Big Data...
.....We Need Big Understanding**

We Are Increasingly
Measuring Everything
And Making This Data Widely Available,

Smart – Connected Devices are Becoming Pervasive

Data is being Connected and Integrated Into Everything We Do

By 2020 The Internet of All Things Will Emerge as a New Framework

50b
connected
devices

5
gadgets
per person

..... Creating Very Large Real Time Data Sets About Everything. . .
.....Volume, Velocity and Variety

Location Intelligence

Will Be Essential

Providing the Content and Context
for Understanding

Big Data and GIS Applications Are Already Emerging

- **Sensor Networks**
- **Software and Hardware Processing Environments**
 - - Hadoop, Spark....., Cloud and Grid Computing....
 - - Supporting large amounts and types of data

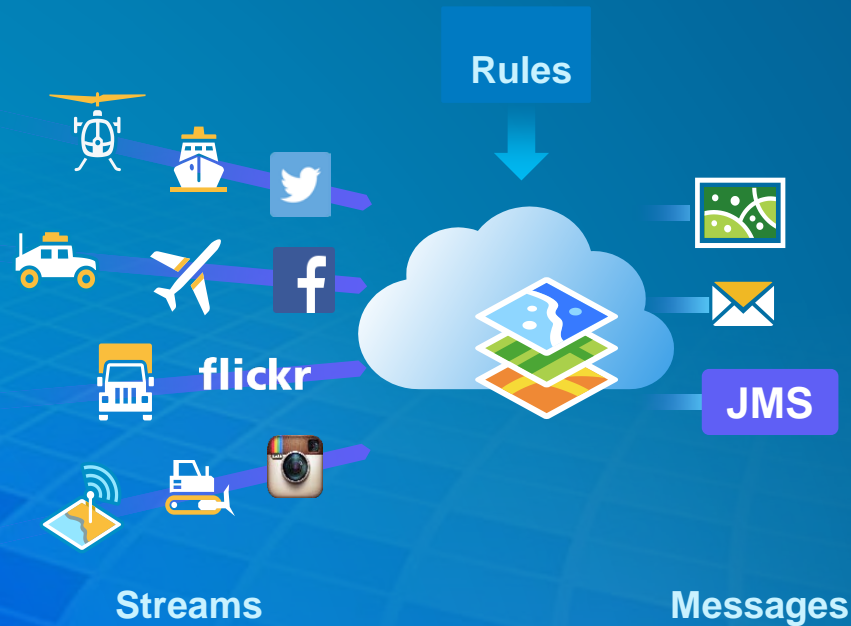

Powerful Applications and Systems

• *Supporting a Wide range of Transportation Systems*

Real Time GIS

- Big Data
- Stream Processing
- Geo-Fencing

Ship Tracking

Continuous Processing and Analysis

Ship Tracking

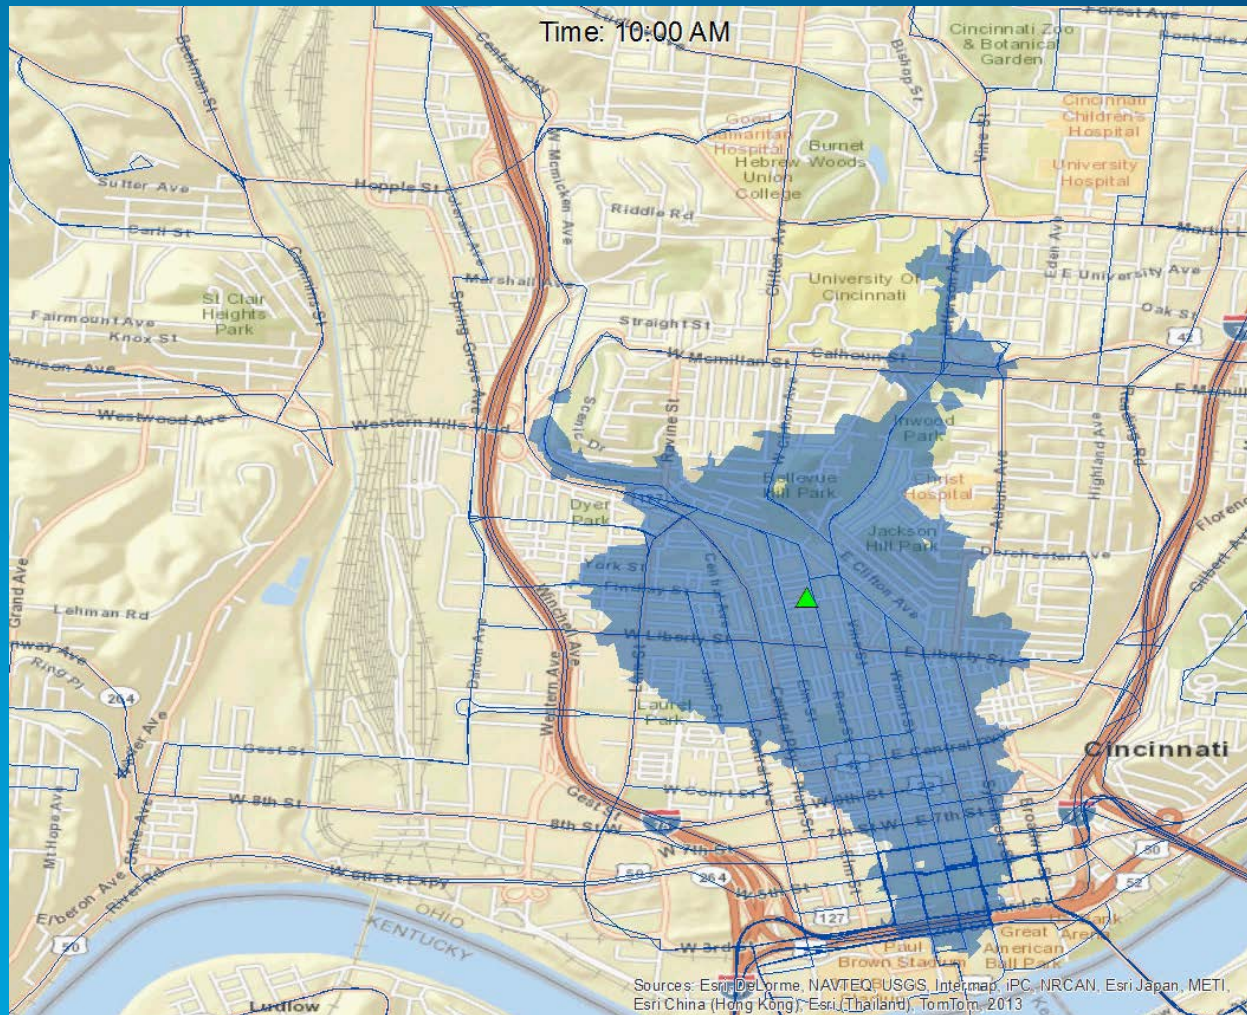

- Containership
- Tanker
- Bulk Carrier
- General Cargo
- Refrigerated Cargo
- Ro-Ro
- Passenger

James J. Corbett,

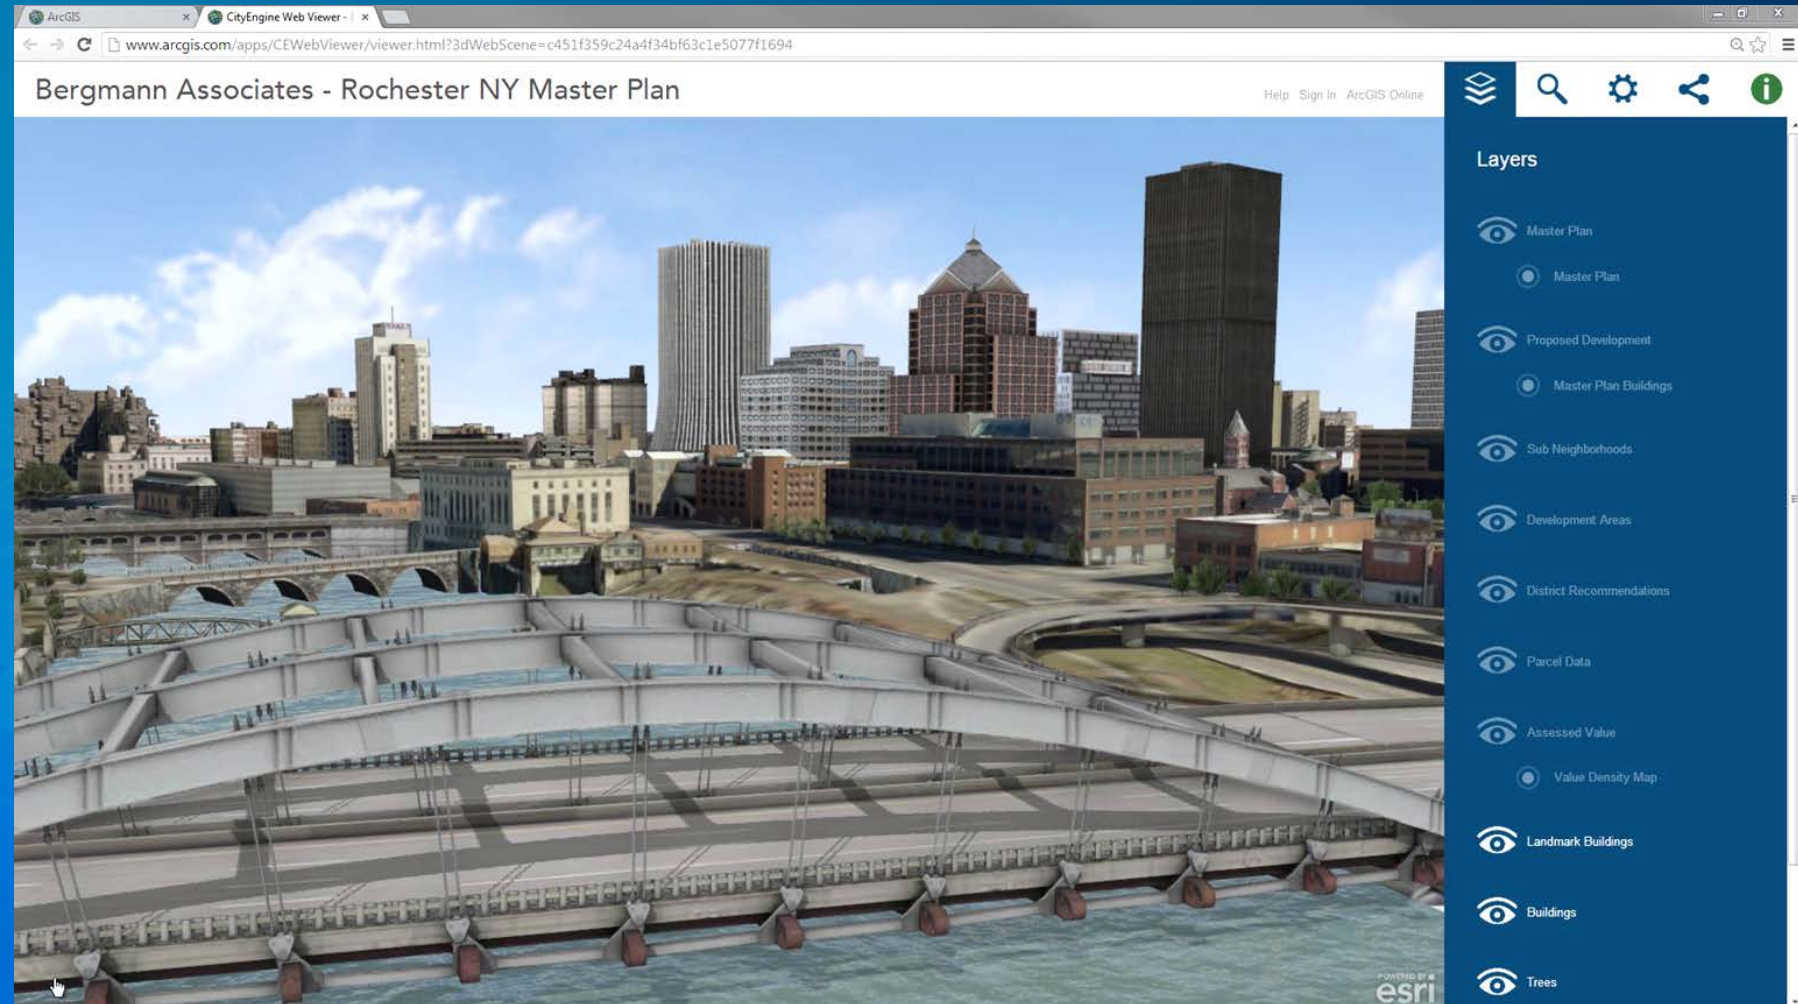

GIS Helps Us Understand Patterns and Relationships

Real Time Transit Accessibility

GIS Helps Us Understand Patterns and Relationships

Web Visualization of Geodesign Proposals

Rochester NY Master Plan
Center-City Master Plan
3D was critical
Lots of civic engagement

Smart System Concepts Are Emerging

... Including Management of Transportation Networks

Meters

Web GIS Is a New Architecture

Making Data Sharing
and Access Easier

Enabling a Flexible and Agile Approach

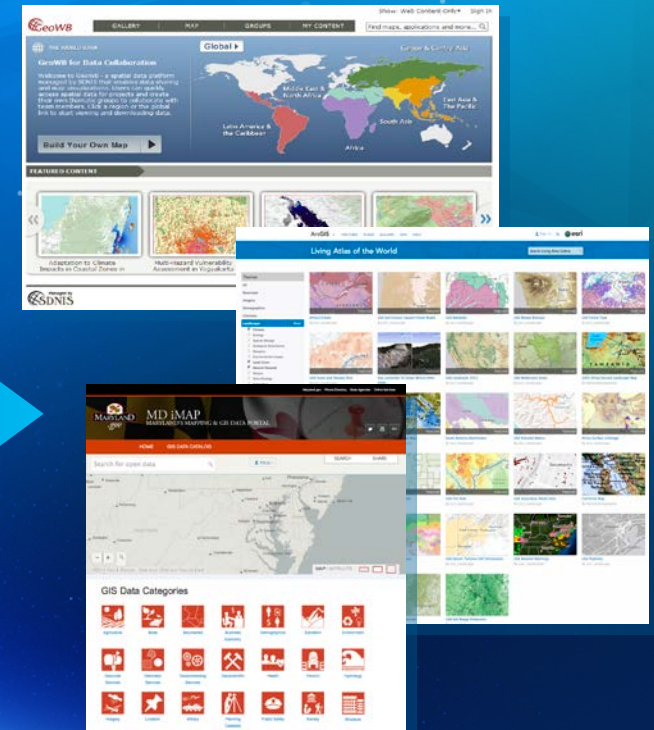

Web GIS Integrates All Types of Information

Organizing and Sharing Your Work

Web Maps and Services

Portal

Both Internally and on the Open Web

Two Approaches For Big Data and GIS Integration

Adding Fundamental Geo-processing and Spatial Analytics

**“Spatialized”
Big Data**

**Web GIS
Integration**

Web GIS Integrates Contents Dynamically

Combining and
Analyzing Information

**Visual
Overlay**

Mashup

**Spatial
Analysis**

Modeling

Helping to Discover and Understand Relationships . . .

Web GIS Creates

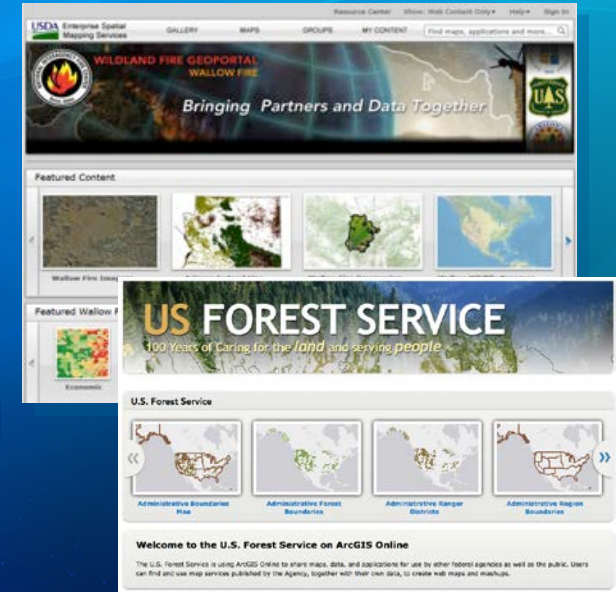

.....an Interconnected Platform

*Bringing Together Data, Technology, and People . . .
... Creating a Framework for Solving Complex Problems*

Web GIS Integrates Organizations and People

Breaking Down the Barriers

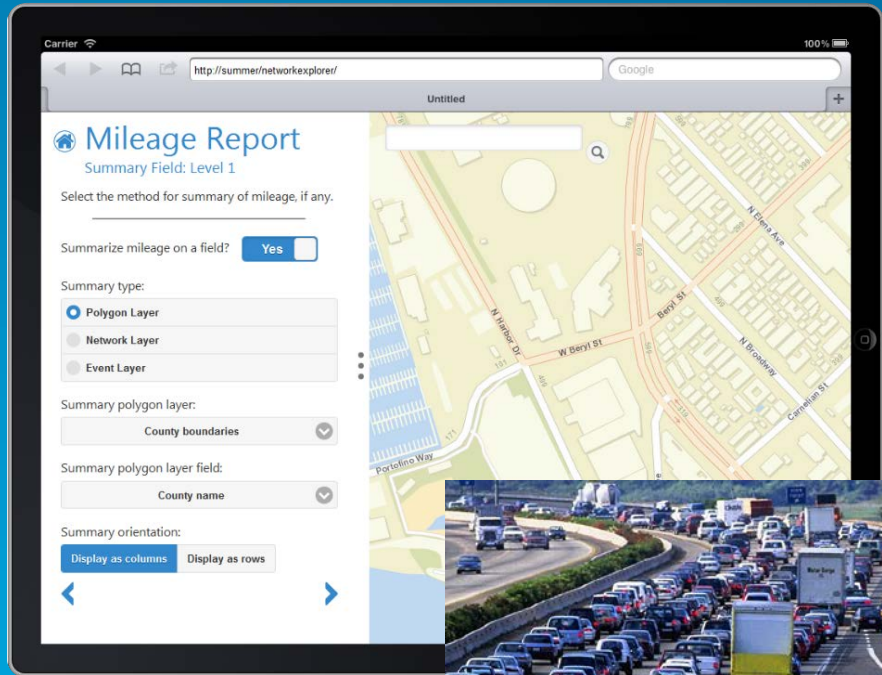

Creating New Relationships

*Sharing Information . . .
. . . Supporting Collaborative Approaches*

Two Final Examples

Open Space

Urban Observatory™ Themes Cities

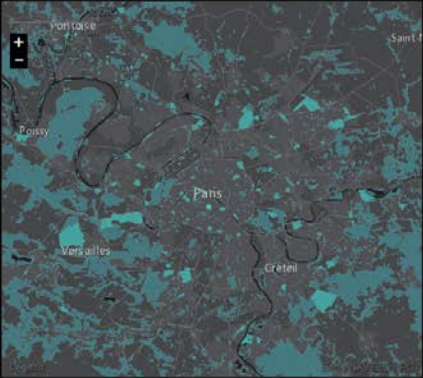

Open Space

Los Angeles

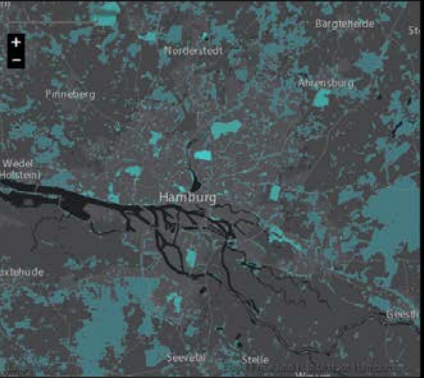

The parks and open space are visible on this map, giving a visual indication of how much open space exists in the city. The map calls out one or more signature parks that are part of the identity of the city. Open space is defined as developed or natural areas that are available for public use within the city.

Paris

The parks and open space are visible on this map, giving a visual indication of how much open space exists in the city. The map calls out one or more signature parks that are part of the identity of the city. Open space is defined as developed or natural areas that are available for public use within the city.

Hamburg

The parks and open space are visible on this map, giving a visual indication of how much open space exists in the city. The map calls out one or more signature parks that are part of the identity of the city. Open space is defined as developed or natural areas that are available for public use within the city.
