Transit Capacity and Quality of Service Manual

Third Edition
TRANSPORTATION RESEARCH BOARD 2013 EXECUTIVE COMMITTEE*

**OFFICERS**

Chair: Deborah H. Butler, Executive Vice President, Planning, and CIO, Norfolk Southern Corporation, Norfolk, VA
Vice Chair: Kirk T. Steudle, Director, Michigan DOT, Lansing
Executive Director: Robert E. Skinner, Jr., Transportation Research Board

**MEMBERS**

Victoria A. Arroyo, Executive Director, Georgetown Climate Center and Visiting Professor, Georgetown University Law Center, Washington, DC
Scott E. Bennett, Director, Arkansas State Highway and Transportation Department, Little Rock
William A. V. Clark, Professor of Geography (emeritus) and Professor of Statistics (emeritus), Department of Geography, University of California, Los Angeles
James M. Crites, Executive Vice President of Operations, Dallas–Fort Worth International Airport, TX
Malcolm Dougerty, Director, California Department of Transportation, Sacramento
John S. Halikowski, Director, Arizona DOT, Phoenix
Michael W. Hancock, Secretary, Kentucky Transportation Cabinet, Frankfort
Susan Hanson, Distinguished University Professor Emerita, School of Geography, Clark University, Worcester, MA
Steve Heminger, Executive Director, Metropolitan Transportation Commission, Oakland, CA
Chris T. Hendrickson, Duquesne Light Professor of Engineering, Carnegie Mellon University, Pittsburgh, PA
Jeffrey D. Holt, Managing Director, Bank of Montreal Capital Markets, and Chairman, Utah Transportation Commission, Huntsville, UT
Gary P. LaGrange, President and CEO, Port of New Orleans, LA
Michael P. Lewis, Director, Rhode Island DOT, Providence
Joan McDonald, Commissioner, New York State DOT, Albany
Donald A. Osterberg, Senior Vice President, Safety and Security, Schneider National, Inc., Green Bay, WI
Steve Palmer, Vice President of Transportation, Lowe’s Companies, Inc., Mooresville, NC
Sandra Rosenbloom, Director, Innovation in Infrastructure, The Urban Institute, Washington, DC
Henry G. (Gerry) Schwartz, Jr., Chairman (retired), Jacobs/Sverdrup Civil, Inc., St. Louis, MO
Kumares C. Sinha, Olson Distinguished Professor of Civil Engineering, Purdue University, West Lafayette, IN
Daniel Sperling, Professor of Civil Engineering and Environmental Science and Policy; Director, Institute of Transportation Studies; University of California, Davis
Gary C. Thomas, President and Executive Director, Dallas Area Rapid Transit, Dallas, TX
Phillip A. Washington, General Manager, Regional Transportation District, Denver, CO

**EX OFFICIO MEMBERS**

Rebecca M. Brewster, President and COO, American Transportation Research Institute, Marietta, GA
Anne S. Ferro, Administrator, Federal Motor Carrier Safety Administration, U.S. DOT
LeRoy Gishi, Chief, Division of Transportation, Bureau of Indian Affairs, U.S. Department of the Interior, Washington, DC
John T. Gray II, Senior Vice President, Policy and Economics, Association of American Railroads, Washington, DC
Michael P. Huerta, Administrator, Federal Aviation Administration, U.S. DOT
David T. Matsuda, Administrator, Maritime Administration, U.S. DOT
Michael P. Melaniphy, President and CEO, American Public Transportation Association, Washington, DC
Victor M. Mendez, Administrator, Federal Highway Administration, U.S. DOT
Robert J. Papp (Adm., U.S. Coast Guard), Commandant, U.S. Coast Guard, U.S. Department of Homeland Security
Lucy Phillips Priddy, Research Civil Engineer, U.S. Army Corps of Engineers, Vicksburg, MS, and Chair, TRB Young Members Council, Washington, DC
Cynthia L. Quartermann, Administrator, Pipeline and Hazardous Materials Safety Administration, U.S. DOT
Peter M. Rogoff, Administrator, Federal Transit Administration, U.S. DOT
David L. Strickland, Administrator, National Highway Traffic Safety Administration, U.S. DOT
Joseph C. Szabo, Administrator, Federal Railroad Administration, U.S. DOT
Polly Trottenberg, Under Secretary for Policy, U.S. DOT
Robert L. Van Antwerp (Lt. General, U.S. Army), Chief of Engineers and Commanding General, U.S. Army Corps of Engineers, Washington, DC
Barry R. Wallerstein, Executive Officer, South Coast Air Quality Management District, Diamond Bar, CA
Gregory D. Winfree, Acting Administrator, Research and Innovative Technology Administration, U.S. DOT
Frederick G. (Bud) Wright, Executive Director, American Association of State Highway and Transportation Officials, Washington, DC

TRANSIT COOPERATIVE RESEARCH PROGRAM

The nation’s growth and the need to meet mobility, environmental, and energy objectives place demands on public transit systems. Current systems, some of which are old and in need of upgrading, must expand service area, increase service frequency, and improve efficiency to serve these demands. Research is necessary to solve operating problems, to adapt appropriate new technologies from other industries, and to introduce innovations into the transit industry. The Transit Cooperative Research Program (TCRP) serves as one of the principal means by which the transit industry can develop innovative near-term solutions to meet demands placed on it.

The need for TCRP was originally identified in TRB Special Report 213—Research for Public Transit: New Directions, published in 1987 and based on a study sponsored by the Urban Mass Transportation Administration—now the Federal Transit Administration (FTA). A report by the American Public Transportation Association (APTA), Transportation 2000, also recognized the need for local, problem-solving research. TCRP, modeled after the longstanding and successful National Cooperative Highway Research Program, undertakes research and other technical activities in response to the needs of transit service providers. The scope of TCRP includes a variety of transit research fields including planning, service configuration, equipment, facilities, operations, human resources, maintenance, policy, and administrative practices.

TCRP was established under FTA sponsorship in July 1992. Proposed by the U.S. Department of Transportation, TCRP was authorized as part of the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA). On May 13, 1992, a memorandum agreement outlining TCRP operating procedures was executed by the three cooperating organizations: FTA, the National Academies, acting through the Transportation Research Board (TRB); and the Transit Development Corporation, Inc. (TDC), a nonprofit educational and research organization established by APTA. TDC is responsible for forming the independent governing board, designated as the TCRP Oversight and Project Selection (TOPS) Committee.

Research problem statements for TCRP are solicited periodically but may be submitted to TRB by anyone at any time. It is the responsibility of the TOPS Committee to formulate the research program by identifying the highest priority projects. As part of the evaluation, the TOPS Committee defines funding levels and expected products.

Once selected, each project is assigned to an expert panel, appointed by the Transportation Research Board. The panels prepare project statements (requests for proposals), select contractors, and provide technical guidance and counsel throughout the life of the project. The process for developing research problem statements and selecting research agencies has been used by TRB in managing cooperative research programs since 1962. As in other TRB activities, TCRP project panels serve voluntarily without compensation.

Because research cannot have the desired impact if projects fail to reach the intended audience, special emphasis is placed on disseminating TCRP results to the intended end users of the research: transit agencies, service providers, and suppliers. TRB provides a series of research reports, syntheses of transit practice, and other supporting material developed by TCRP research. APTA will arrange for workshops, training aids, field visits, and other activities to ensure that results are implemented by urban and rural transit industry practitioners.

The TCRP provides a forum where transit agencies can cooperatively address common operational problems. The TCRP results support and complement other ongoing transit research and training programs.

NOTICE

The project that is the subject of this report was a part of the Transit Cooperative Research Program, conducted by the Transportation Research Board with the approval of the Governing Board of the National Research Council.

The members of the technical panel selected to monitor this project and to review this report were chosen for their special competencies and with regard for appropriate balance. The report was reviewed by the technical panel and accepted for publication according to procedures established and overseen by the Transportation Research Board and approved by the Governing Board of the National Research Council.

The opinions and conclusions expressed or implied in this report are those of the researchers who performed the research and are not necessarily those of the Transportation Research Board, the National Research Council, or the program sponsors.

The Transportation Research Board of the National Academies, the National Research Council, and the sponsors of the Transit Cooperative Research Program do not endorse products or manufacturers. Trade or manufacturers’ names appear herein solely because they are considered essential to the object of the report.
The National Academy of Sciences is a private, nonprofit, self-perpetuating society of distinguished scholars engaged in scientific and engineering research, dedicated to the furtherance of science and technology and to their use for the general welfare. On the authority of the charter granted to it by the Congress in 1863, the Academy has a mandate that requires it to advise the federal government on scientific and technical matters. Dr. Ralph J. Cicerone is president of the National Academy of Sciences.

The National Academy of Engineering was established in 1964, under the charter of the National Academy of Sciences, as a parallel organization of outstanding engineers. It is autonomous in its administration and in the selection of its members, sharing with the National Academy of Sciences the responsibility for advising the federal government. The National Academy of Engineering also sponsors engineering programs aimed at meeting national needs, encourages education and research, and recognizes the superior achievements of engineers. Dr. Charles M. Vest is president of the National Academy of Engineering.

The Institute of Medicine was established in 1970 by the National Academy of Sciences to secure the services of eminent members of appropriate professions in the examination of policy matters pertaining to the health of the public. The Institute acts under the responsibility given to the National Academy of Sciences by its congressional charter to be an adviser to the federal government and, on its own initiative, to identify issues of medical care, research, and education. Dr. Harvey V. Fineberg is president of the Institute of Medicine.

The National Research Council was organized by the National Academy of Sciences in 1916 to associate the broad community of science and technology with the Academy’s purposes of furthering knowledge and advising the federal government. Functioning in accordance with general policies determined by the Academy, the Council has become the principal operating agency of both the National Academy of Sciences and the National Academy of Engineering in providing services to the government, the public, and the scientific and engineering communities. The Council is administered jointly by both Academies and the Institute of Medicine. Dr. Ralph J. Cicerone and Dr. Charles M. Vest are chair and vice chair, respectively, of the National Research Council.

The Transportation Research Board is one of six major divisions of the National Research Council. The mission of the Transportation Research Board is to provide leadership in transportation innovation and progress through research and information exchange, conducted within a setting that is objective, interdisciplinary, and multimodal. The Board’s varied activities annually engage about 7,000 engineers, scientists, and other transportation researchers and practitioners from the public and private sectors and academia, all of whom contribute their expertise in the public interest. The program is supported by state transportation departments, federal agencies including the component administrations of the U.S. Department of Transportation, and other organizations and individuals interested in the development of transportation. www.TRB.org

AUTHOR ACKNOWLEDGMENTS

The TCQSM, 3rd edition was developed by TCRP Project A-15C. Paul Ryus of Kittelson & Associates, Inc. (KAI) was the Principal Investigator. Co-investigators were Alan Danaher, Mark Walker, Foster Nichols, and William (Bill) Carter of Parsons Brinckerhoff, Inc. (PB); Elizabeth (Buffy) Ellis of KFH Group, Inc.; Linda Cherrington of Texas A&M Transportation Institute (TTI); and Anthony (Tony) Bruzzone of Arup.

Each edition of the TCQSM builds on the material developed for previous editions. The full set of contributors to the 1st and 2nd editions is too numerous to list here, but can be viewed in the acknowledgments sections of those editions. The original authors of material that has been retained between editions are acknowledged below.

The Introduction and Concepts chapters (Chapters 1–4) were written by Paul Ryus, with contributions from Buffy Ellis and Linda Cherrington (demand-response transit, Chapter 2), Daniel Fisher of Arup (value of time, Chapter 4), and Jamie Parks of KAI (bicycle access, Chapter 4). Some rail transit concepts material (Chapter 2) originally written for previous editions by Tom Parkinson has been retained, along with ferry transit concepts (Chapter 2) and park-and-ride material (Chapter 4) originally written by Miranda Blogg. Ferry vessel descriptions were updated based on comments provided by William Hockberger, a member of the TRB Committee on Ferry Transportation.
Chapter 5, Quality of Service Methods, was written by Paul Ryus (fixed-route transit and calculation examples), and Buffy Ellis and Linda Cherrington (demand-responsive transit). Material on quality of service applications is derived from a Florida Department of Transportation guide written by KAI. Some material on transit service coverage originally developed by Peter Haliburton for the 2nd edition has been retained.

Chapter 6, Bus Transit Capacity, was written by Paul Ryus, with contributions from Alan Danaher of PB (transit-preferential treatments) and Jamie Parks (calculation example). Appendix B (Dwell Time Data Collection Procedure) was originally authored by Lewis Nowlin for the 1st edition. The core bus capacity and speed methods were originally developed by Kevin St. Jacques and Herbert S. Levinson through TRCP Project A-7, “Operational Analysis of Bus Lanes on Arterials.”

Chapter 7, Demand-Responsive Transit, was developed for the 3rd edition by Buffy Ellis and Linda Cherrington.

Chapter 8, Rail Transit Capacity, was written by Foster Nichols, updating Tom Parkinson’s work from the 1st edition and adding the section on applications. Ian Hood of Arup and several members of TRB committees related to rail transit provided input during chapter development. The core rail capacity methods were originally developed by Tom Parkinson and Ian Fisher through TCRP Project A-8, “Rail Transit Capacity.”

Chapter 9, Ferry Transit Capacity, was written by Bill Carter and Ryan Avery of PB. Tony Bruzzone and several members of the TRB Committee on Ferry Transportation provided input during chapter development. The core ferry capacity method was originally developed by Miranda Blogg for the 2nd edition.

Chapter 10, Station Capacity, was written by Mark Walker. Contributions to the chapter were also made by James Anderson of PB, Daniel Fischer and Eric Rivers of Arup, and Jonathan Brooks of TTI. In addition, David Haase and Jeremy Parnes of New York City Transit contributed data and analysis referenced in the chapter. A major source for Chapter 10 was John Fruin’s *Pedestrian Planning and Design*.

Chapter 11, Glossary, was compiled from a number of sources for the 1st edition by Tom Parkinson. Definitions have been obtained from numerous sources with acknowledgment and thanks to the many individuals and committees involved—in particular, Benita H. Gray, editor of the 1989 TRB Urban Public Transportation Glossary, from which almost one-half of the entries originated. The TRB glossary is out of print. Other major sources are the APTA website glossary (April 1998); National Transportation Statistics Glossary; Washington State DOT Glossary; TCRP A-8 Rail Transit Capacity Glossary; APTA Glossary of Reliability, Availability, and Maintainability Technology for Rail Rapid Transit 1993; draft NCHRP 8-35 ITS Glossary (including material developed by the FHWA, FTA, and U.S. DOT Joint Program Office); ANSI B77.1 aerial ropeway definitions; and a 1985 U.S. Forest Service glossary on aerial tramways, ski lifts, and tows. The contributions of Ian Fisher in compiling and cross-referencing the glossary are acknowledged. Additional terms introduced in the 3rd edition have been added to the glossary.

Additional contributors to the development of the TCQSM 3rd edition include Kelly Blume (literature review), Kathryn Coffel and Jessica Horning (focus groups and survey), Jamie Parks and Alison Tanaka (spreadsheet tool development), Kyle Meyer (review website development), Matt Broughton (graphics assistance), and Jackie Olsommer and Dorret Oosterhoff (administrative assistance).

The project team would like to thank volunteers from TRB public transportation committees who provided comments on one or more individual chapters: John Allen, Tunde Balvanyos, Jeff Becker, Gregory Benz, Martha Bewick, Bob Bourne, John Crocker, Henning Eichler, William Hockberger, Alex Lu, Peter Martin, Paul O’Brien, Robin Russell, Roberta Weisbrod, and Charlene Wilder. The researchers would particularly like to thank Herbert Levinson, who reviewed and provided detailed comments on the entire draft manual. Finally, we would like to thank the 57 focus group participants and 131 survey respondents who took the time to share their feedback on the 2nd edition and thoughts on desired improvements for the 3rd edition.

Finally, the project team would like to thank the members of the TCRP Project A-15C panel, listed separately in this front section, whose thoughtful comments were greatly appreciated throughout the TCQSM development process.

TCRP Report 165: Transit Capacity and Quality of Service Manual, 3rd edition (TCQSM) is a reference document that provides current research-based guidance on transit capacity and quality of service issues and the factors influencing both. The manual contains background, statistics, and graphics on the various types of public transportation, and it provides a framework for measuring transit availability, comfort, and convenience from the passenger and transit provider points of view. The manual contains quantitative techniques for calculating the capacity and other operational characteristics of bus, rail, demand-responsive, and ferry transit services, as well as transit stops, stations, and terminals. Example calculations are included. The TCQSM and the accompanying CD-ROM are intended for use by a range of practitioners, including transit planners, transportation planners, traffic engineers, transit operations personnel, design engineers, management personnel, teachers, and university students.

HISTORY OF THE TCQSM

The TCQSM, 3rd edition updates and improves the prior manuals. Much of the new content and revised presentation in the TCQSM, 3rd edition is a result of outreach in which users and potential users of TCQSM manual identified new or updated content that would make the manual more relevant to their work.

- **The 1st edition, TCRP Web-Only Document 6, was produced in 1999.** assembling for the first time in one place a set of methods for evaluating the capacity of bus and rail transit services and facilities, and introducing a framework for evaluating the quality of service from the passenger point of view. A portion of the material in this edition also formed the basis for the transit chapters in the Highway Capacity Manual 2000.

- **The 2nd edition, TCRP Report 100, was published in late 2003.** A major focus of this edition was on filling gaps in knowledge. This edition introduced material on ferry transit capacity, expanded coverage of demand-responsive transit (DRT) and Americans with Disabilities Act (ADA) issues, and added guidance on transit preferential treatments and park-and-ride access to transit. This edition tested and enhanced the TCQSM’s transit quality of service framework.

- **The 3rd edition of the TCQSM** incorporates the results of new research on transit capacity and quality of service that has occurred in the ten years since the 2nd Edition was developed, including original research conducted as part of the production contract for the manual.

**FOREWORD**

By Dianne S. Schwager
Staff Officer
Transportation Research Board
ORGANIZATION OF THE TCQSM 3RD EDITION

The TCQSM 3rd edition consists of twelve chapters, divided into four main topic areas:

• **Introduction.** The introductory chapter provides a concise guide to the TCQSM. It describes how to use the manual; presents the manual’s purpose, scope, and intended users; describes the contents of each chapter; highlights the changes made in the 3rd edition; and describes companion documents to the TCQSM.

• **Concepts Chapters.** The three concepts chapters present concepts, define important terms, and provide illustrations of the extent to which various factors inside and outside a transit agency’s control influence transit capacity, speed, reliability, and quality of service.

• **Methods Chapters.** The six methods chapters provide a combination of mode-specific concepts information, computational methods for evaluating a variety of performance measures related to transit operations and quality of service, guidance on potential applications of the methods, and worked examples of performing calculations. These chapters address capacity for bus, DRT, rail transit, ferry transit, and stops and stations.

• **Reference Chapters and Supporting Material.** Two chapters at the end of the manual provide reference material supporting the rest of the manual, including a comprehensive transit glossary, a list of the variables used in the TCQSM’s computational methods, and an index to the manual.

The CD-ROM that accompanies the TCQSM provides PDF versions of all the TCQSM chapters for use on tablets and computers; links to all of the TCRP reports referenced in the TCQSM; spreadsheets that help perform the calculations used in the bus, ferry, and rail transit capacity methods; and presentations that introduce the manual and its core material.
Chapter 1 User’s Guide

1. INTRODUCTION
   1-1 How to Use the Manual
   1-5 How to Find Material of Interest
   1-6 Five Key Concepts
2. PURPOSE AND SCOPE
   1-9 Purpose and Objectives
   1-9 Scope
   1-9 Intended Users
   1-9 Potential Applications
   1-11 International Use
3. WHAT’S NEW IN THE THIRD EDITION
   1-13 Organizational Changes
   1-14 Content Changes
4. COMPANION DOCUMENTS
   1-18 Highway Capacity Manual
   1-18 Americans with Disabilities Act (ADA) Standards for Transportation
   1-19 Facilities
   1-18 National Fire Prevention Association (NFPA) 130 Standard
