

Learning about and Using the Research in Progress (RIP) Database

Janet Daly
Indexing Manager
August 24, 2017

Objectives

At today's webinar, you will learn to:

- distinguish between the TRID and RIP Databases
- locate records in the RIP Database
- receive e-mail notification of new RIP records
- export RIP records
- enter new project records into the RIP Database
- update or delete an existing record

How are TRID and RIP Different?

	TRID	RIP
Type of records	Represent publications	Represent projects
Record creator	Professional indexers from TRB	Primarily DOT or UTC staff
Record permanence	Record is permanent	Record updated as project progresses; Deleted when project is completed and final report is in TRID
Number of records	1.5 million	14,000
Website	trid.trb.org	rip.trb.org
Contact information for individuals	Not made public	Publicly available

Research in Progress (RIP) Database

Why Use RIP?

- Prevent duplication of research
- Connect researchers working on similar projects
- Identify experts for panels or committees
- Highlight research being done by your agency

Adding Project Records to RIP

- State DOTs, US DOT, UTCs can enter projects
 - Required for UTC and federally funded projects
- Login credentials issued upon request
- Source Agency
 - “Owner” of the record
 - Automatically entered based on login
 - Lead agency for UTC should enter projects
- Enter individual project records on data entry form or submit an electronic file of projects.
- All project records are reviewed by professional indexers
- Delete project record in RIP once the final report is available in TRID.

The Research in Progress website allows users to:

- Search the entire Research in Progress database by various fields
- Browse project records by subject category
- Use a look up for searching by index terms, individuals, organizations or location
- Subscribe to receive e-mail notification of new RiP records in specific subject areas

Authorized individuals can also:

- Add new research projects
- Update and delete existing projects
- View expired projects

About RiP

The Transportation Research Board's Research in Progress (RiP) website contains the Research In Progress (RiP) Database and a data-entry system to allow users in State Departments of Transportation, the U.S. Department of Transportation, University Transportation Centers and other US DOT funded universities to add, modify and delete information on their current research projects. The RiP database now contains more than 13,000 current or recently completed transportation research projects. Most of the RiP records are projects funded by Federal and State Departments of Transportation. University transportation research is also included. The RiP Database now serves as a clearinghouse of University Transportation Centers ongoing research. International research projects from the TRIP file of the International Transport Research Documentation Database are now included in the RiP database. The Transportation Association of Canada supplies records from its Canadian Surface Transportation Research Database for RiP.

Welcome to the new interface for Research in Progress (RiP) data entry!

The new interface streamlines the process of entering and updating your project records. Although it looks different, the functionality and process are very similar to the former interface and thus we expect that users will easily transition to the new interface.

[A demonstration on how to use the new RiP interface is available here.](#)

Title:	The Impact of Transit-Oriented Development on Social Capital
Accession Number:	01607537
Record Type:	Project
Abstract:	<p>This study focuses on the ability of Transit Oriented Development (TOD) to improve social capital and interactions within a community. The expectation is that TOD has a positive impact on the lifestyle and activities of individuals, who reside, work, and frequent these locations, and this can include increases in social capital (or civic engagement). Using data from a previous survey of transit station locations in New Jersey, an analysis will be conducted that examines correlations between station proximity, measures of the built environment, and survey questions designed to measure the social capital of respondents. These questions inquire about respondent perceptions of neighborhood as a place to live, sense of community, knowing their neighbors, trust, and whether their community is a good place to raise a child, as well as volunteering in the community. Various statistical techniques will be applied to the data to determine how TODs may be associated with various social capital measures.</p>
