TRB TRANSPORTATION RESEARCH BOARD

TRB Webinar: Capturing and Integrating Cost Data into Maintenance Management Systems

September 26, 2024

2:00 – 3:30 PM

PDH Certification Information

1.5 Professional Development Hours (PDH) – see follow-up email

You must attend the entire webinar.

Questions? Contact Andie Pitchford at TRBwebinar@nas.edu

The Transportation Research Board has met the standards and requirements of the Registered Continuing Education Program. Credit earned on completion of this program will be reported to RCEP at RCEP.net. A certificate of completion will be issued to each participant. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the RCEP.

AICP Credit Information

1.5 American Institute of Certified Planners Certification
Maintenance Credits

You must attend the entire webinar

Log into the American Planning Association website to claim your
credits

Contact AICP, not TRB, with questions

Purpose Statement

This webinar will help agencies navigate the process of integrating cost data into the MMS to effectively manage and track maintenance expenditures. Presenters will share two case studies from mature users of MMS, North Carolina Department of Transportation (NCDOT) and West Virginia DOT.

Learning Objectives

At the end of this webinar, you will be able to:

- Identify practices for capturing maintenance costs in MMS, including the level of detail, data quality, integration, operational and business value, and barriers
- Evaluate the specific pathways and details of integrations with agency financial systems
- Understand the practical implementation and challenges of cost data integration in MMS

Questions and Answers

- Please type your questions into your webinar control panel
- We will read your questions out loud, and answer as many as time allows

Practices for Capturing and Integrating Cost Data in Maintenance Management Systems

Omidreza Shoghli, University of North Carolina at Charlotte
Charles Pilson, Mott MacDonald

September 26, 2024

Background

- A key **objective of an MMS** is to **capture maintenance costs** at an appropriate level of detail for analysis and planning.
- **Level of detail, quality, and accuracy** of captured cost data **varies** across DOTs.
- **TAMP** under MAP-21 **mandates the inclusion of maintenance costs** for asset management and planning.
- DOTs use **various systems for cost data capture**, including **in-house** or **commercial MMS**, with **varying integration levels with ERP** systems.
- **Accurate cost data** supports **reimbursement claims** for emergency relief (e.g., FEMA) and **insurance claims** for damages.
- Advances in cost capture **technology**, including mobile field entry and system integration, **influence the accuracy and timeliness** of cost data.

Objective and Scope

The Objective of the Synthesis Study was to:

- Documents state DOT practices for capturing maintenance costs in their MMS.
- Describe DOT practices regarding the
 - Level of detail captured,
 - Quality of the data,
 - Level of integration with other agency systems,
 - Operational and business value of the data, and
 - Barriers in capturing these data.

Synthesis Report Available

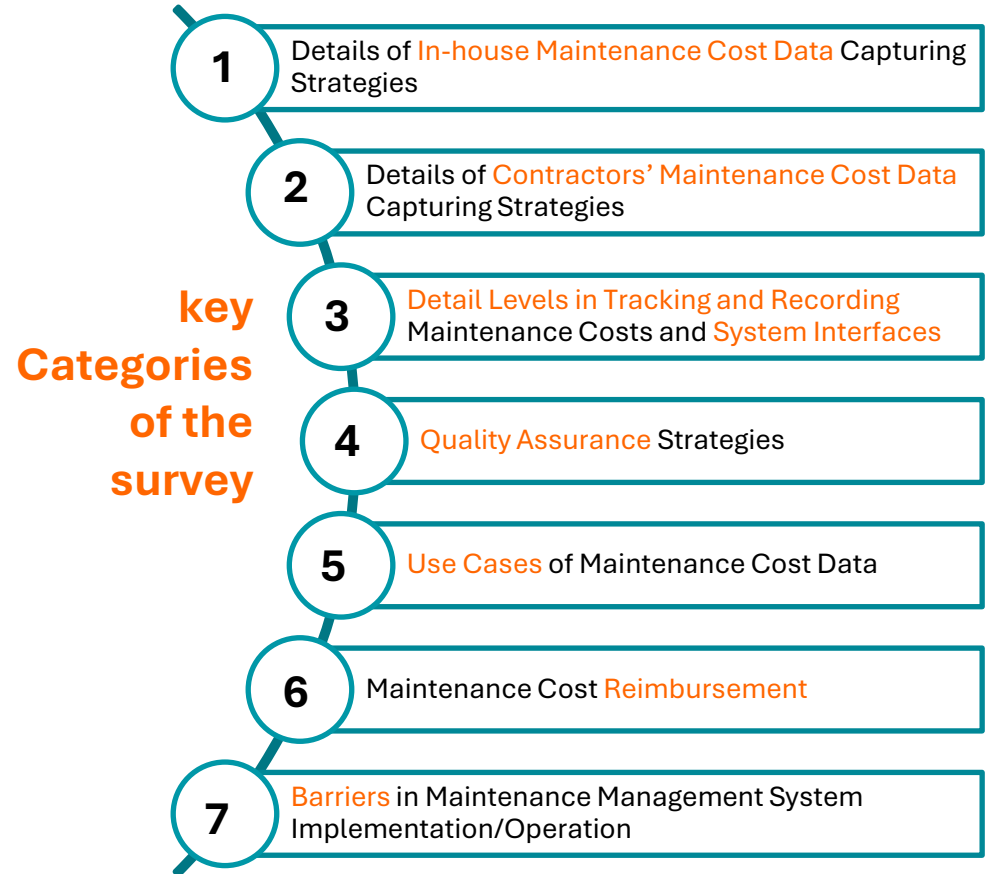

Download the
Synthesis
Report

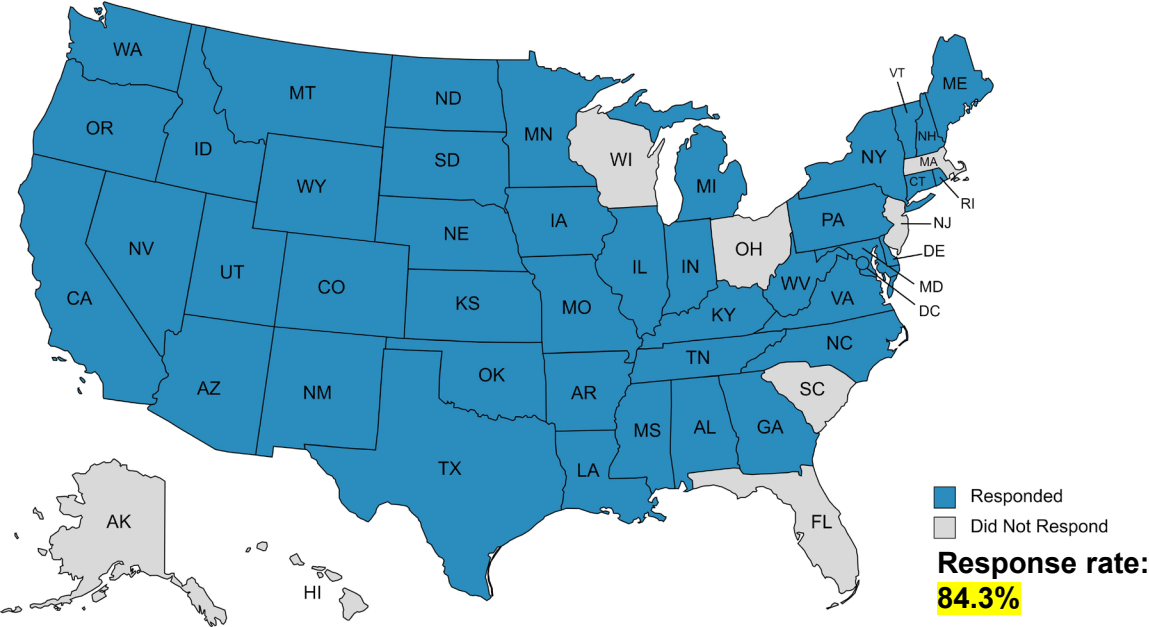

<https://nap.nationalacademies.org/catalog/27810/practices-for-capturing-and-integrating-cost-data-in-maintenance-management-systems>

Synthesis Methodology

- **Literature review:** Current state of research and practice regarding maintenance cost data capture in MMS
- **Survey:** Devised to capture the state of the practice of maintenance cost data management within DOTs
- **Survey Distribution:** All voting members of the AASHTO Committee on Maintenance
- **Case Examples:** In-depth understanding of the successes, challenges, and barriers to using an MMS in managing costs of maintenance

Geographical Distribution of Responding DOTs and MMS Adaption rates

Geographical distribution of DOTs that responded to the survey (N= 43)

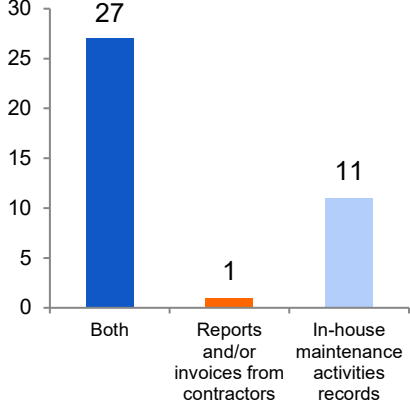

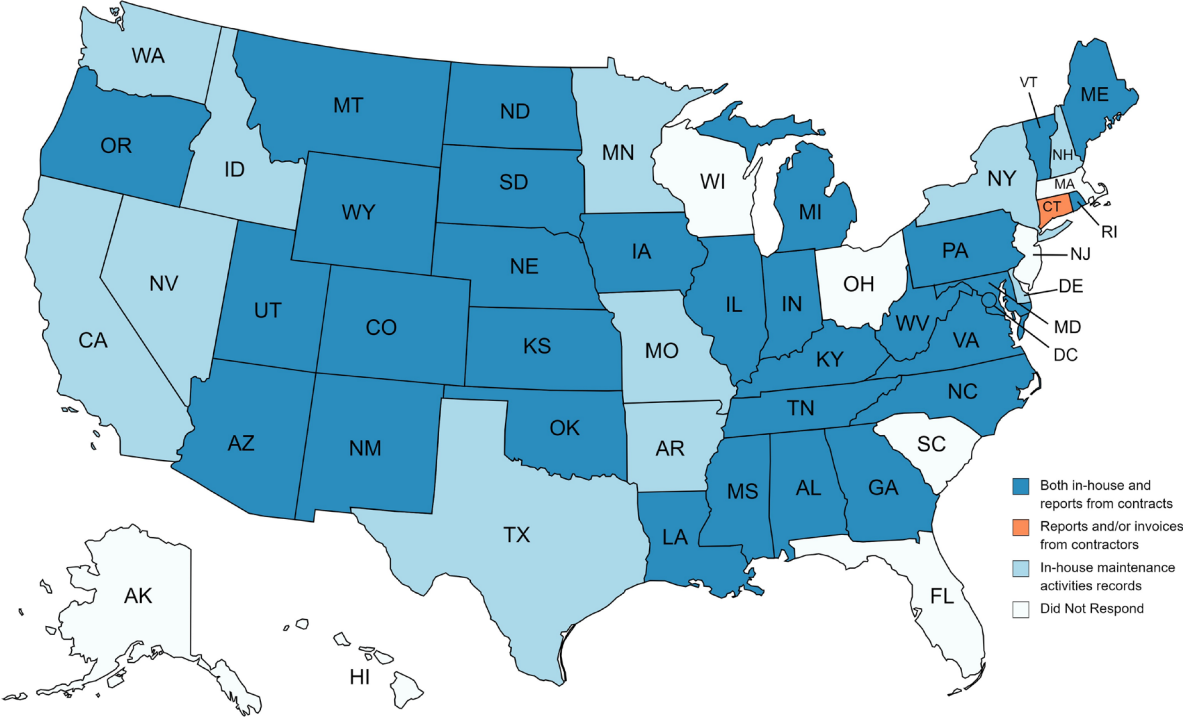

Adoption rates of MMSs among surveyed DOTs (N= 43).

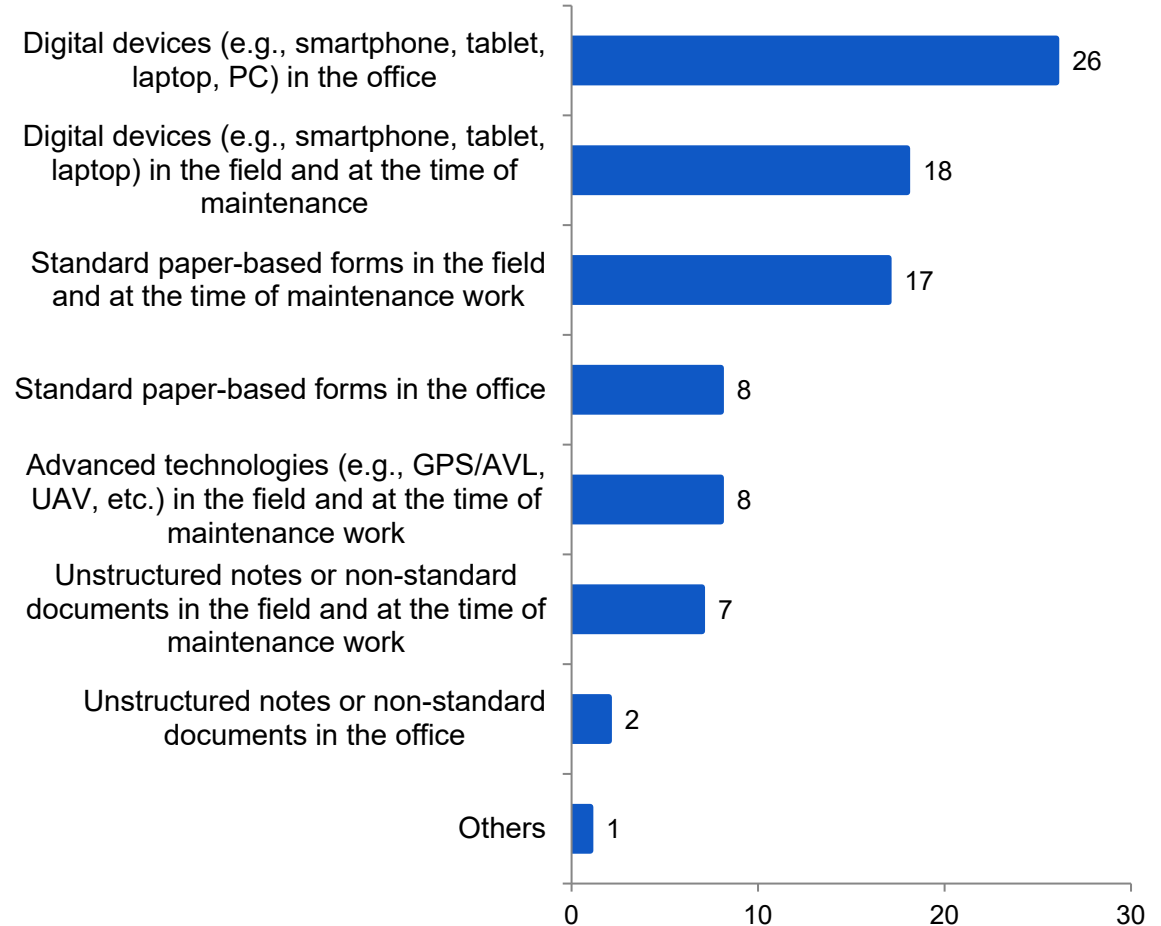

1.

Details of In-house Maintenance Cost Data Capturing Strategies

Sources of Maintenance Cost Data

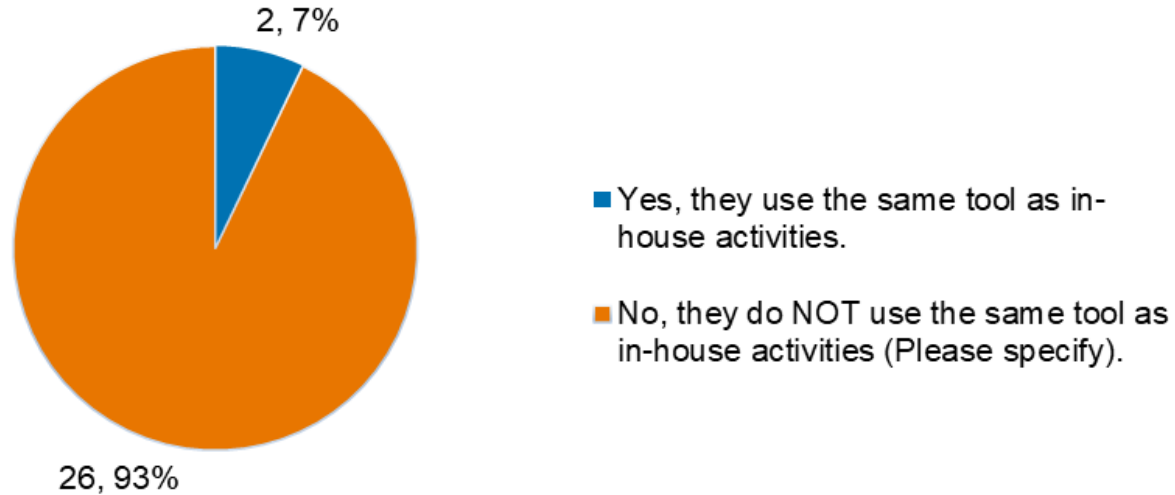

Tools used by DOTs for initially recording the maintenance information

2.

Details of Contractors' Maintenance Cost Data Capturing Strategies

Similarity of the Tools Used by Contractors for Maintenance Data Recording

Outsourced Maintenance Activities

Outsourced Maintenance Activities	Number of Responses
Guardrail Repair	25
Striping	20
Vegetation Management	19
Drainage Repair	16
Mowing	15
Debris Removal	15
Bridge Inspection	12
Plowing / Snow and Ice Operation	11
Pothole Repair	8

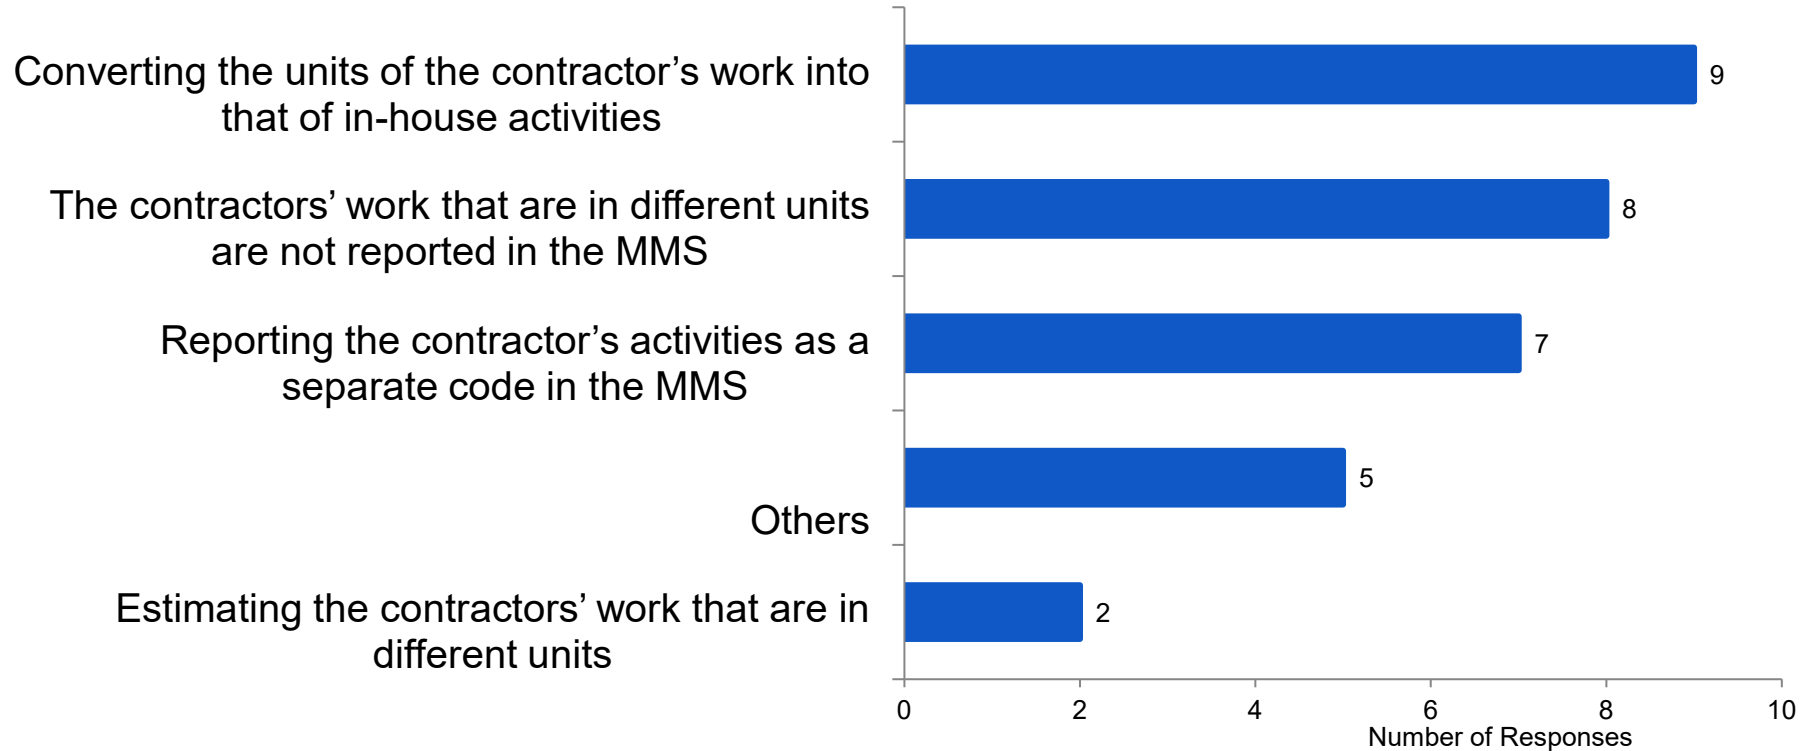

Level of Details in Contractors Reports/Invoices

Similarity of Unit of Measures used by Contractors to that of DOTs

Approaches to Accounting for Contractors' Work with Different Units

3.

**Details of Tracking and Recording
Maintenance Costs and System Interfaces**

Details of Tracking and Recording Maintenance Costs and System Interfaces

A. Basic Information

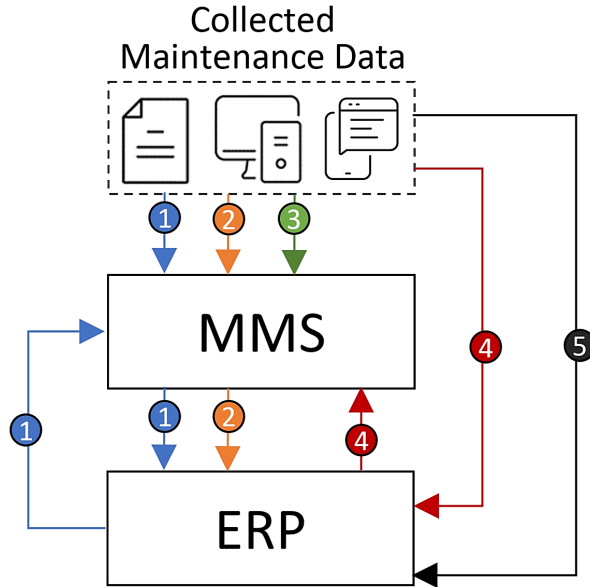

B. Employee Information

C. Equipment Information

D. Material Information

E. Contract and Other Cost Information

Data Recording and Interface Paths

① 0- Not recorded in MMS or ERP at all

① 1- First recorded in MMS, next costed in ERP, and finally interfaced back to MMS

② 2- First recorded in MMS, then interfaced with ERP

③ 3- First recorded in MMS, then NOT interfaced with ERP

④ 4- First recorded in ERP, then interfaced with MMS

⑤ 5- First recorded in ERP, then NOT interfaced with MMS

Six potential options from initial entry to possible interfacing scenarios

A. Recording and Interfacing of Basic Work Order Information in MMS and ERP Systems

	...interfaced with ERP, next coded in ERP and finally interfaced back to MMS		...interfaced with ERP		...NOT interfaced with ERP		...interfaced with MMS		...NOT interfaced with MMS		...in MMS or ERP	
	First Recorded in MMS then			First Recorded in ERP then			Not Recorded					
	1	2	3	4	5	0						
Work/Task Order Number	3	11	13	5	3	4						
Date Work Accomplished (Date cost incurred)	3	18	11	5	2							
Cost Center (e.g., District/ Division/ Unit/ County/ Maintenance Yard)	3	17	9	6	2	2						
Authorization/ Budget Account Code Information	2	13	3	6	9	6						
Maintenance Activity Code	4	17	13	2	3							
Maintenance Sub-activity Code		9	17	1	2	10						
Route Number	1	7	23	3	4	1						
Route Direction	1	4	19	3	3	9						
Route Lane		3	15	1	4	16						
Latitude and Longitude		4	14		3	18						
Begin and End Mile Posts		5	23	2	3	6						
Perpendicular Offset	1		11		3	24						
Quantity of Work Accomplished	2	8	23	3	3							
Unit of Measure for Work Accomplished		9	25	3	1	1						
Category of Work	1	7	18	4	1	8						

B. Recording and Interfacing of **Employee Information** in MMS and ERP Systems

	...interfaced with ERP: next costed in ERP and finally interfaced back to MMS			...interfaced with ERP		...NOT interfaced with ERP	...interfaced with MMS	...NOT interfaced with MMS	...in MMS or ERP
	First Recorded in MMS then	First Recorded in ERP then	Not Recorded	1	2	3	4	5	0
Work/Task Order Number	3	10	15	2	4	5			
Date Work Accomplished (Date cost incurred)	4	16	12	4	2	1			
Employee Name/ID	6	11	5	11	4	2			
Wage Rate (\$\$/hr)	6	4	7	10	8	4			
Hours Reported	5	17	7	6	3	1			

C. Recording and Interfacing of Equipment Information in MMS and ERP Systems

	...interfaced with ERP, next coded in ERP, and finally interfaced back to MMS		...interfaced with ERP		...NOT interfaced with ERP		...interfaced with MMS		...NOT interfaced with MMS		...in MMS or ERP	
	First Recorded in MMS then			First Recorded in ERP then			Not Recorded					
	1	2	3	4	5	0						
Work/Task Order Number	2	9	15	2	5	6						
Date of Usage (Date cost incurred)	3	13	14	2	5	2						
Equipment Name/ID	3	11	11	7	5	2						
Equipment Type	2	7	14	8	4	4						
Equipment Start Meter	2	4	10		8	15						
Equipment End Meter	2	4	10		9	14						
Equipment Status (Owned/Leased)	1	2	9	5	9	13						
Total Hours Reported	3	12	14	3	4	3						
Total Miles Reported	2	10	11	1	6	9						
Equipment Operator	1	4	19		7	8						

D. Recording and Interfacing of **Material Information** in MMS and ERP Systems

	...interfaced with ERP, next costed in ERP, and finally interfaced back to MMS			...interfaced with ERP		...NOT interfaced with ERP	...interfaced with MMS	...NOT interfaced with MMS	...in MMS or ERP
	First Recorded in MMS then			First Recorded in ERP then		Not Recorded			
	1	2	3	4	5	0			
Work/Task Order Number	2	9	17	1	4	5			
Date of Usage (Date cost incurred)	3	12	16	3	3	1			
Inventory Stock Bin/Stockpile/ID/Original Location (Source)	5	8	14	2	5	4			
Material Type	4	10	14	3	5	2			
Material Unit Cost	4	5	14	6	5	4			
Material Manufacturer		2	9	1	8	18			
Total Quantity Reported	5	10	15	5	2	1			

E. Recording and Interfacing of **Contract and Other Cost Information** in MMS and ERP Systems

	...interfaced with ERP, next costed in ERP, and finally interfaced back to MMS ...interfaced with ERP ...NOT interfaced with ERP ...interfaced with MMS ...NOT interfaced with MMS ...in MMS or ERP					
	First Recorded in MMS then			First Recorded in ERP then		Not Recorded
	1	2	3	4	5	0
Work/Task Order Number	2	7	12	1	6	10
Date Work Accomplished (Date cost incurred)	2	7	12	4	5	8
Contract or PO (Including line item)	2	4	7	4	14	7
Product/Service Type (e.g., Labor, Equipment, Material, Contract Work)	1	3	12	5	10	7
Quantity	2	5	11	6	9	5
Cost	3	3	9	9	8	6

MMS to Capture Cost Data for Reimbursement

Use of MMS for Capturing Data for Reimbursement Requests

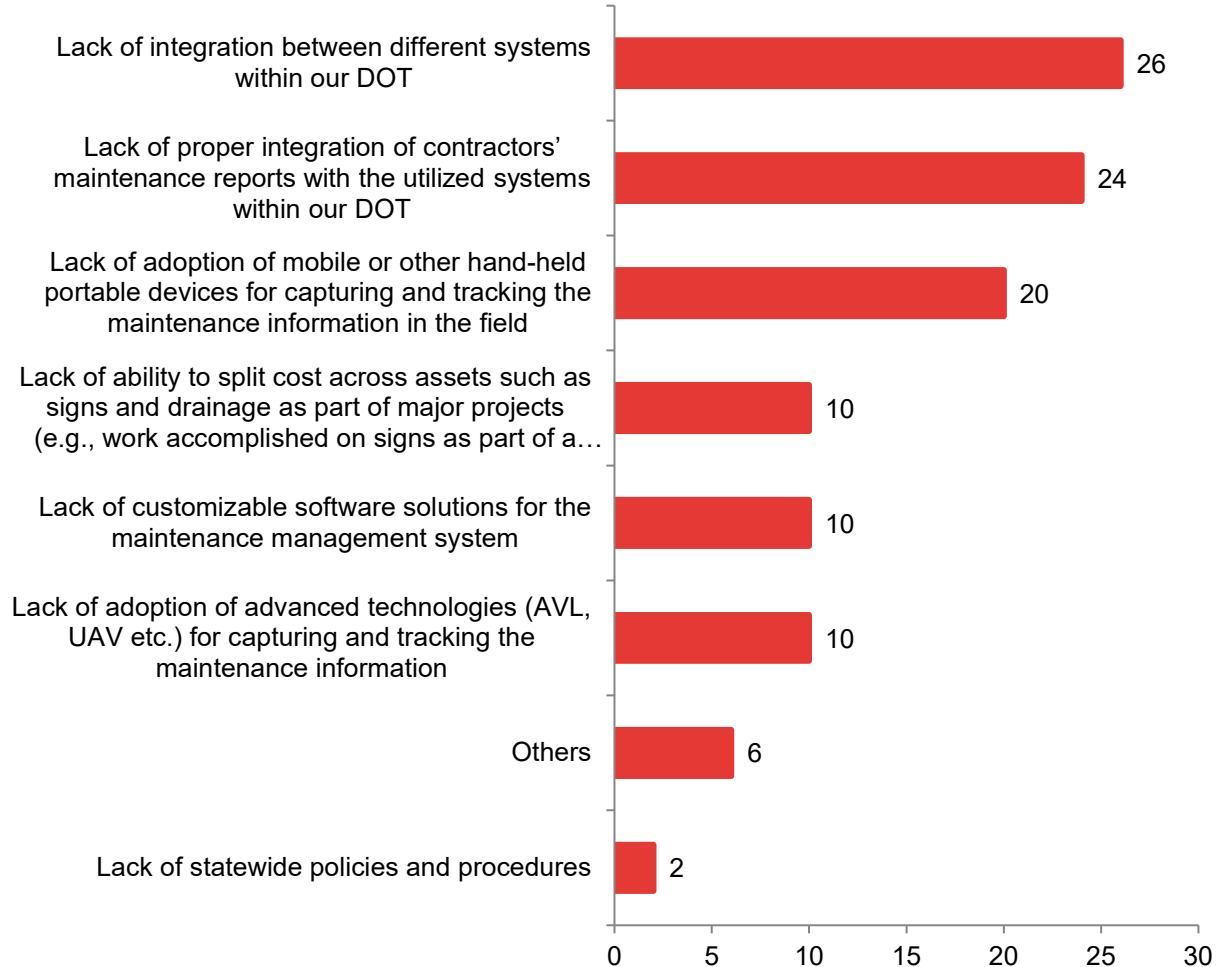

DOTs Approach for Specifying the Reimbursable Maintenance Work

7.

**Barriers in Capturing
the Cost of Maintenance**

Barriers in Capturing the Cost of Maintenance

Summary of Findings & Conclusion

Maintenance Cost Data Capturing Strategies

- **Sources and frequency of maintenance cost data:** Most DOTs are capturing a combination of in-house maintenance activity-based LEM costs, and contractor costs daily
- **Initial Input of daily cost data:** Mix of paper forms and mobile devices
- **Advanced Technologies:** GPS, AVL, UAVs being used
- **Input by In-House and Contractor:** Typically different tools/systems
- **Activities performed by Contract:** Many maintenance activities are outsourced
- **Level of detail for Contract data capture:** Higher level needed but date, quantity and location important. Units of measure commonly the same.

Details of Tracking and Recording Maintenance Costs and System Interfaces

● Basic WO/TO Information:

- Basic and location Work/Task Order is commonly first recorded in the MMS (1, 2, 3).
- In some cases basic WO/TO info is interfaced with the ERP (1, 2).

● Employee, Equipment, Materials and Other Cost Information:

- Most commonly, LEM master data is duplicated in both the ERP and MMS.
- Cost data is either just calculated in the MMS (3), or entered in the ERP and interfaced to MMS (4, 5).
- Only 3 DOTs enter LEM in MMS, interface to ERP, and get costs back (1).

Quality Assurance Strategies

- **Layered approval and supervision:** This was by far the most common method
- **Exception reports to find potential data entry errors:** Also a common method
- **Checks against likely maximum and minimum thresholds during data entry:**
Data entry checks against ranges was third
- **Comparison between estimated and actual costs in ERP and MMS:** Ten DOTs reported this comparison
- **Other strategies:** Training and Support, Quality Assurance Reviews, Dedicated Performance Management Groups, etc.

Barriers in Capturing the Cost of Maintenance

- **System Integration Issues**
- **Contractors' Report Integration**
- **Technology Adoption Challenges:** Mobile devices, advanced technologies like Automated Vehicle Location (AVL) or Unmanned Aerial Vehicles (UAV)
- **Customizable Software Needs:** Configurability and difficulty in splitting costs across assets.

Future Research Needs

Future Research Needs

Data Capture**

Cost Capture and Level of Service

NORTH CAROLINA
Department of Transportation

NCDOT - Capturing and Integrating Cost Data into Maintenance Management Systems

Matthew P. Whitley, PE, MPA

NCDOT – Division 7 Division Maintenance Engineer

September 26, 2024

Connecting people, products and places safely and efficiently with customer focus, accountability and environmental sensitivity to enhance the economy and vitality of North Carolina

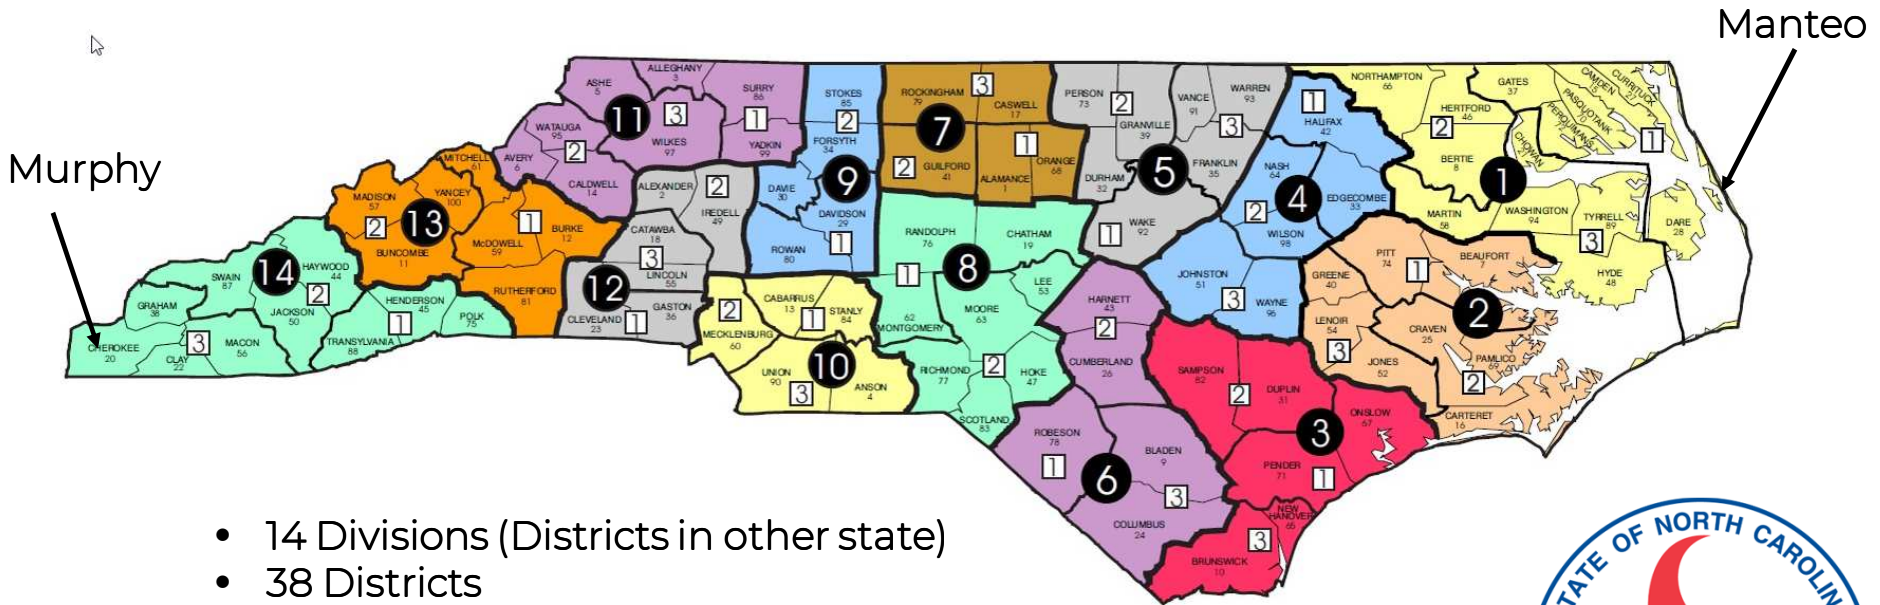

Discussion Topics

- NC / NCDOT Statistics
- NCDOT – AMS and Financial System
- Cost Capture
 - Past, Present, and Future
- Lessons Learned

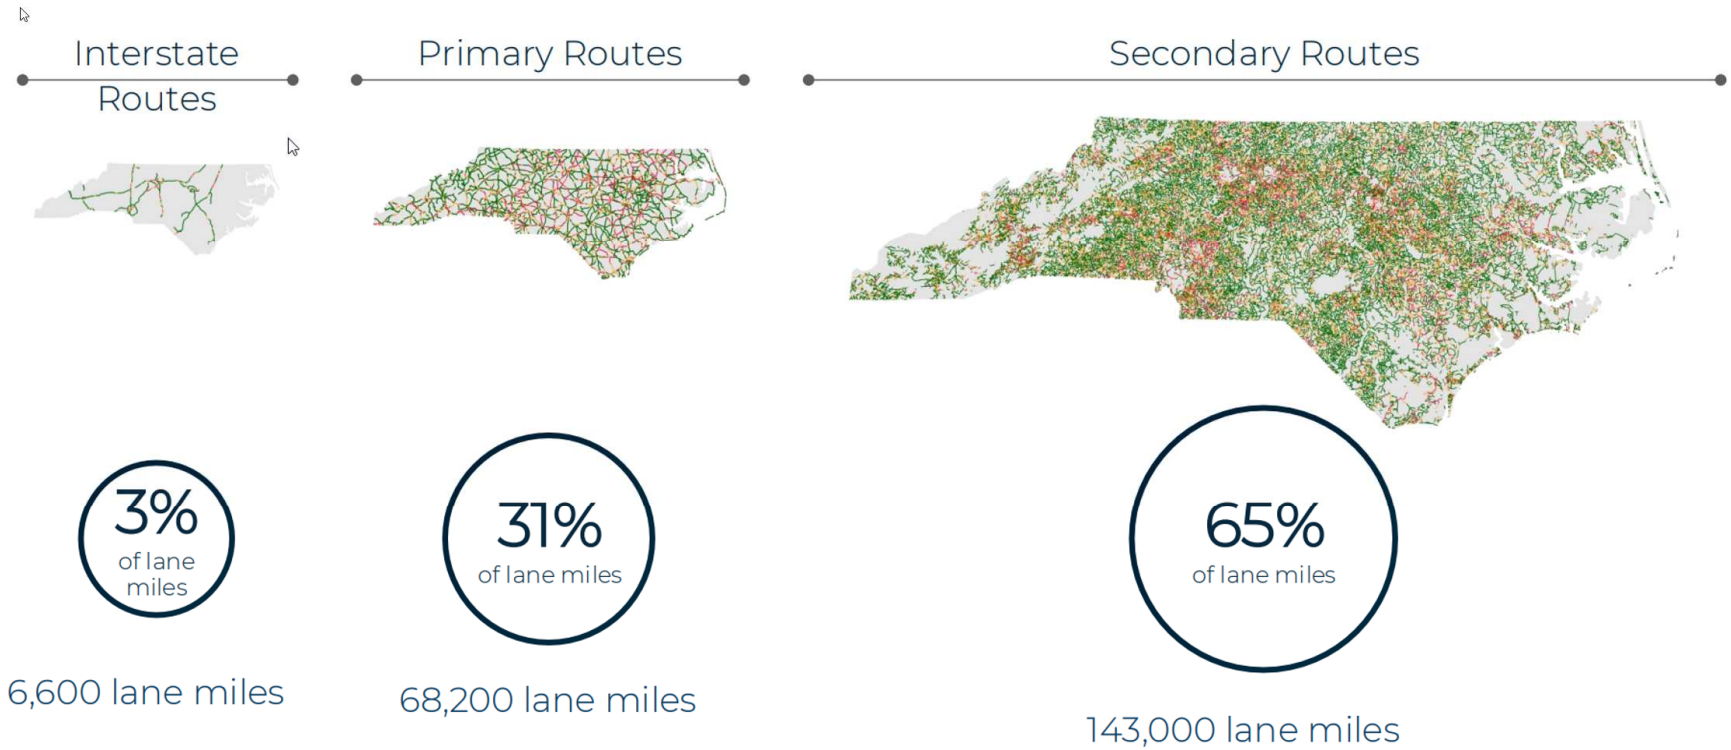

NCDOT – Statistics

NCDOT – Division / District

- 14 Divisions (Districts in other state)
- 38 Districts
- 100 Counties
- 560 miles wide
- Murphy to Manteo Distance is 544 miles
- Over 10 million residents

Structural Assets

- 220,000 lane miles of pavement
- 13,600+ bridges (deck area of ~120M sft.)
- 300,000 pipes

Functional Assets

- 850,000 road signs
- 150,000 roadway lights
- 110,000 traffic signals
- 120,000 drop inlets
- 2,000 miles of curb and gutter
- 4,000 shoulder-miles of guardrails and barriers

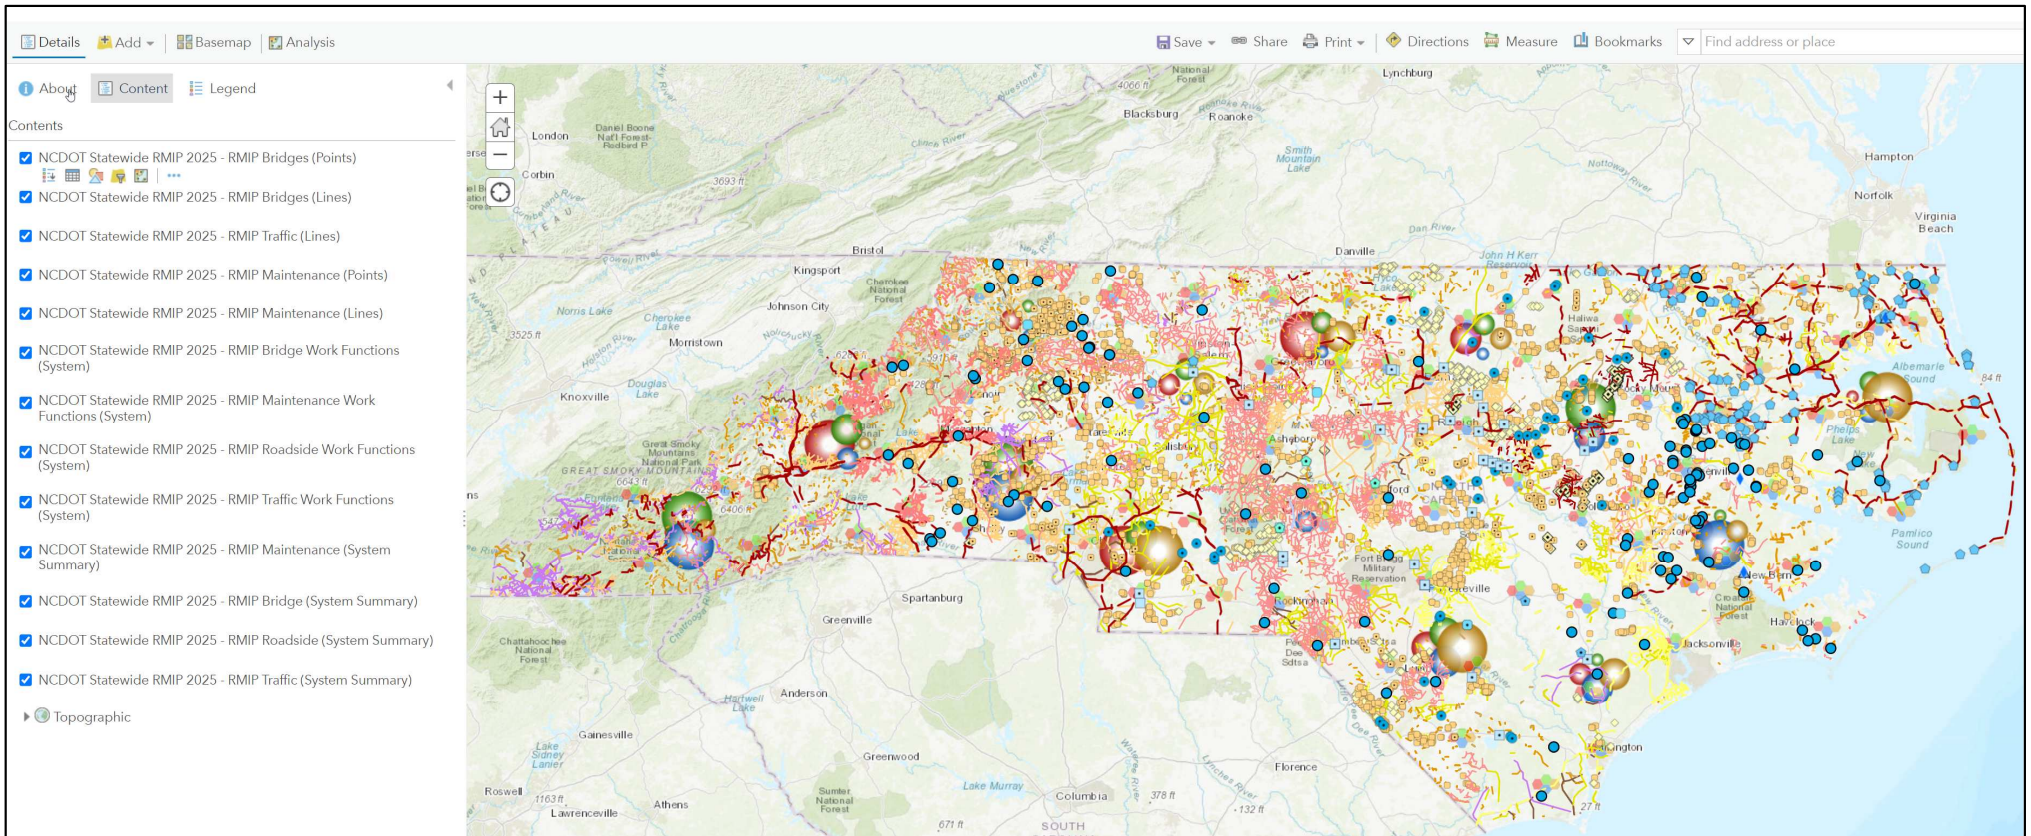

Maintenance Funding

FY 2025

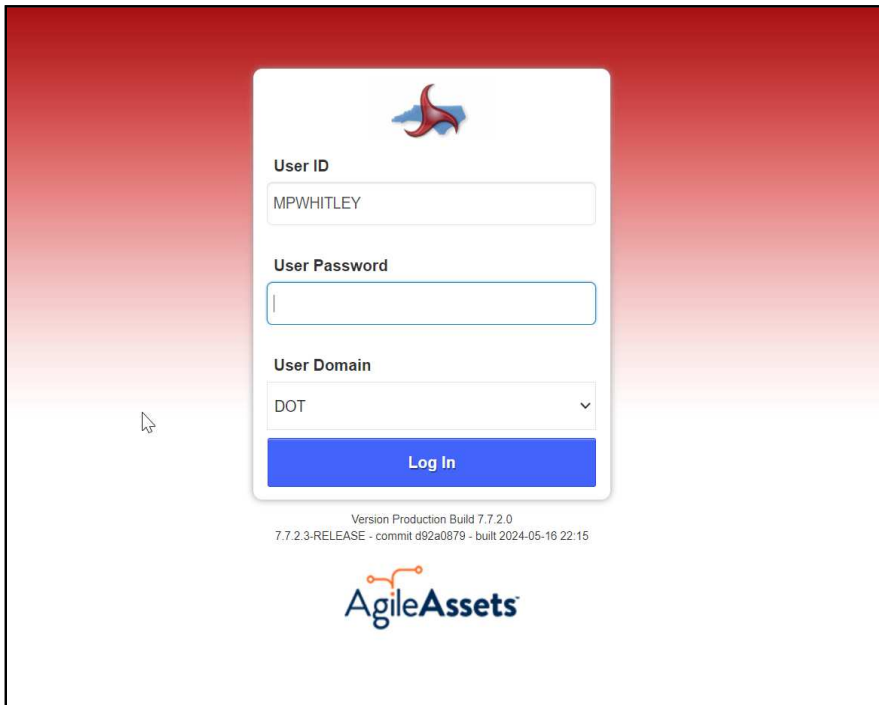

Allocations based on Year 2 of 2025 Biennium Budget (FY 25 includes NR funds)

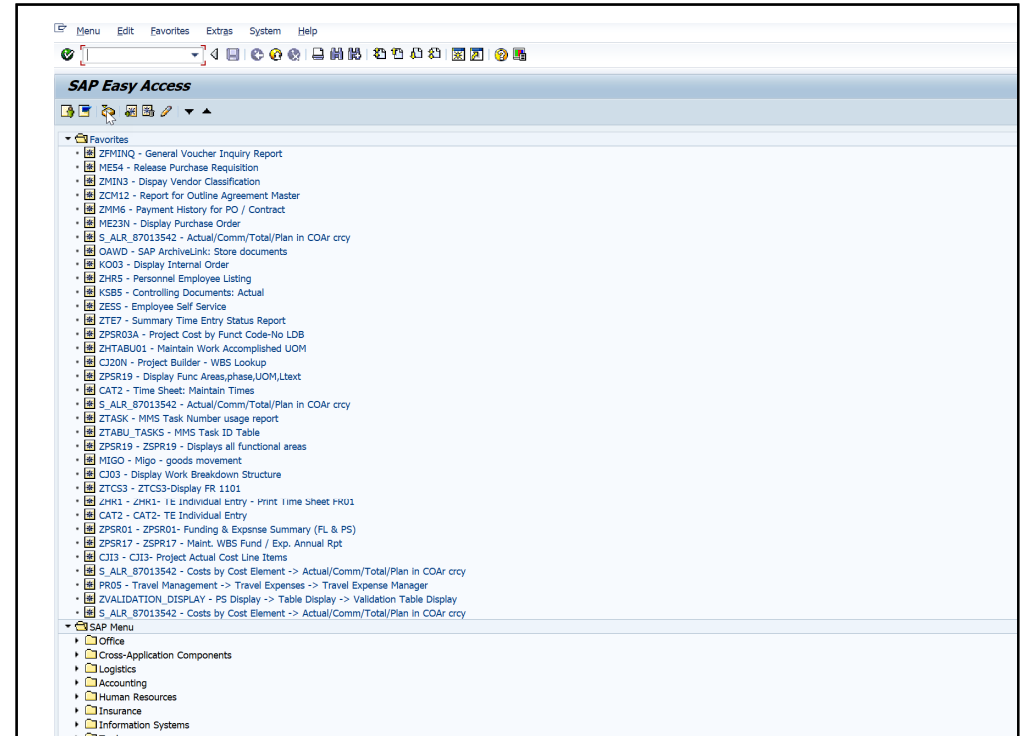

Cost Capture Goal – Display on a map!

NCDOT – Maintenance Management / Financial System

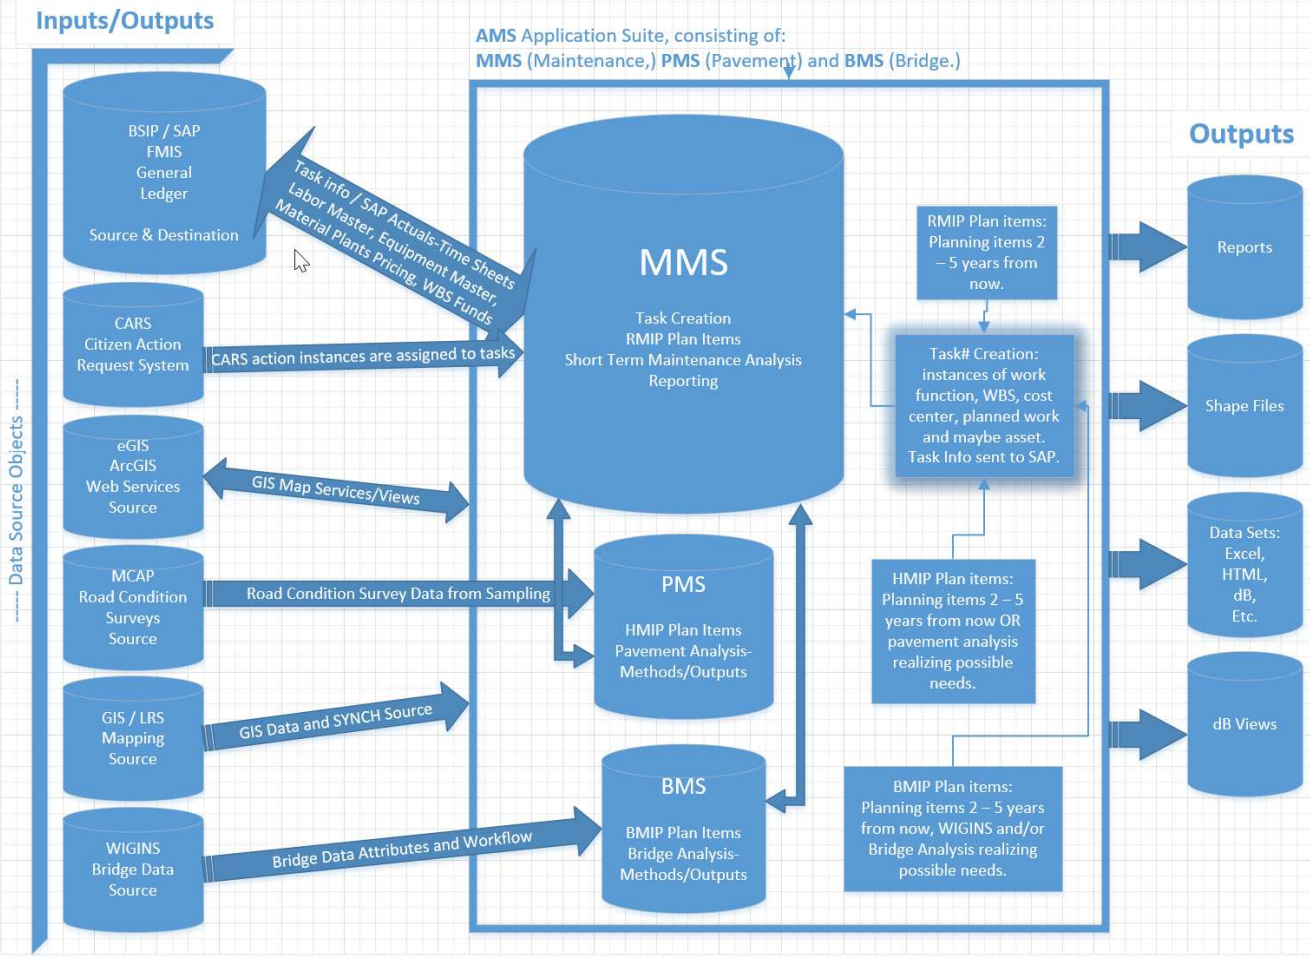

AMS - Trimble / Agile Assets Product
Implemented – early 2000

SAP – Financial Management System of Record
Implemented – early 2000

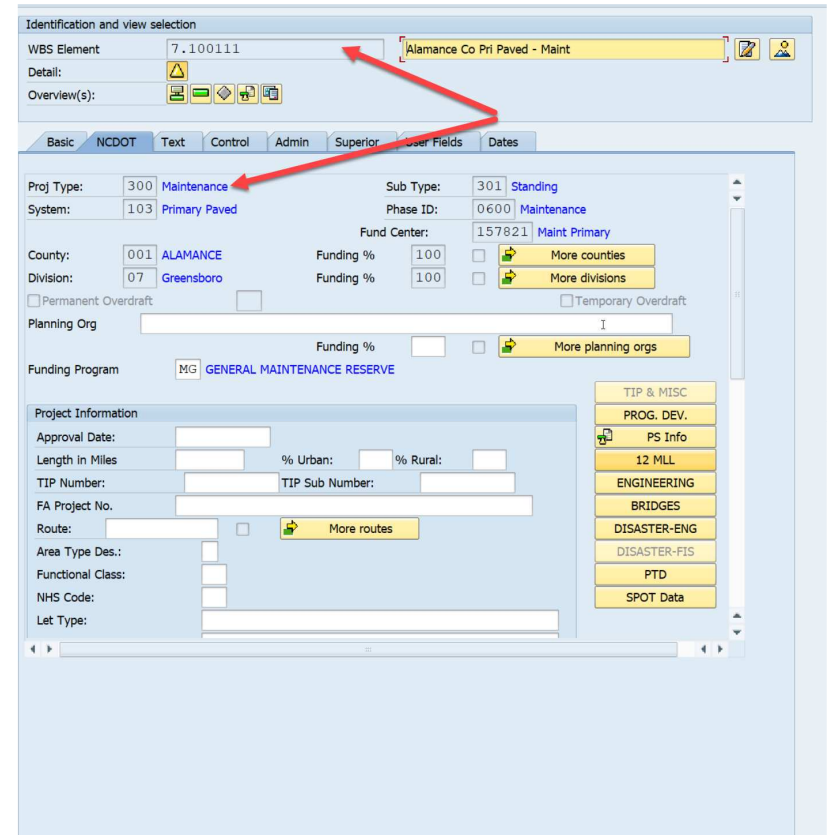

Asset Management System (AMS) version 6.9 / 7.1 Process/Data Flows – OOD format. FVestal – 3/9/18

- This runs at 2am each morning
- SAP is the accounting system of record
- Cost data comes in several interface files that include:
 - Labor, Equipment, Materials, and Other Costs

SAP Filter of Costs Passed to Asset Management System

- AMS receives cost information from several types of expenditures
 - WBS Type / Subtype – Maintenance
- Not all expenditure data is tied to a work order
 - Expenditures not tied to Work Order / Tasks are still available for reporting purposes

Labor, Equipment, Materials, Accomplishments, and Other

- Labor Cost - True Dollars Expended (From SAP / ERP System)
- Equipment Cost - True Dollars Expended (From SAP / ERP System)
- Material Cost- True Dollars Expended (From SAP / ERP System)
- Other Costs – Costs outside of (L,E,M). Cost to replace a mailbox purchased at home retailer.
Contract Costs, etc.
- Work Accomplishments – Amount of work (captured in Work Function Unit of Measure)

NCDOT – Cost Capture (Past, Present, Future)

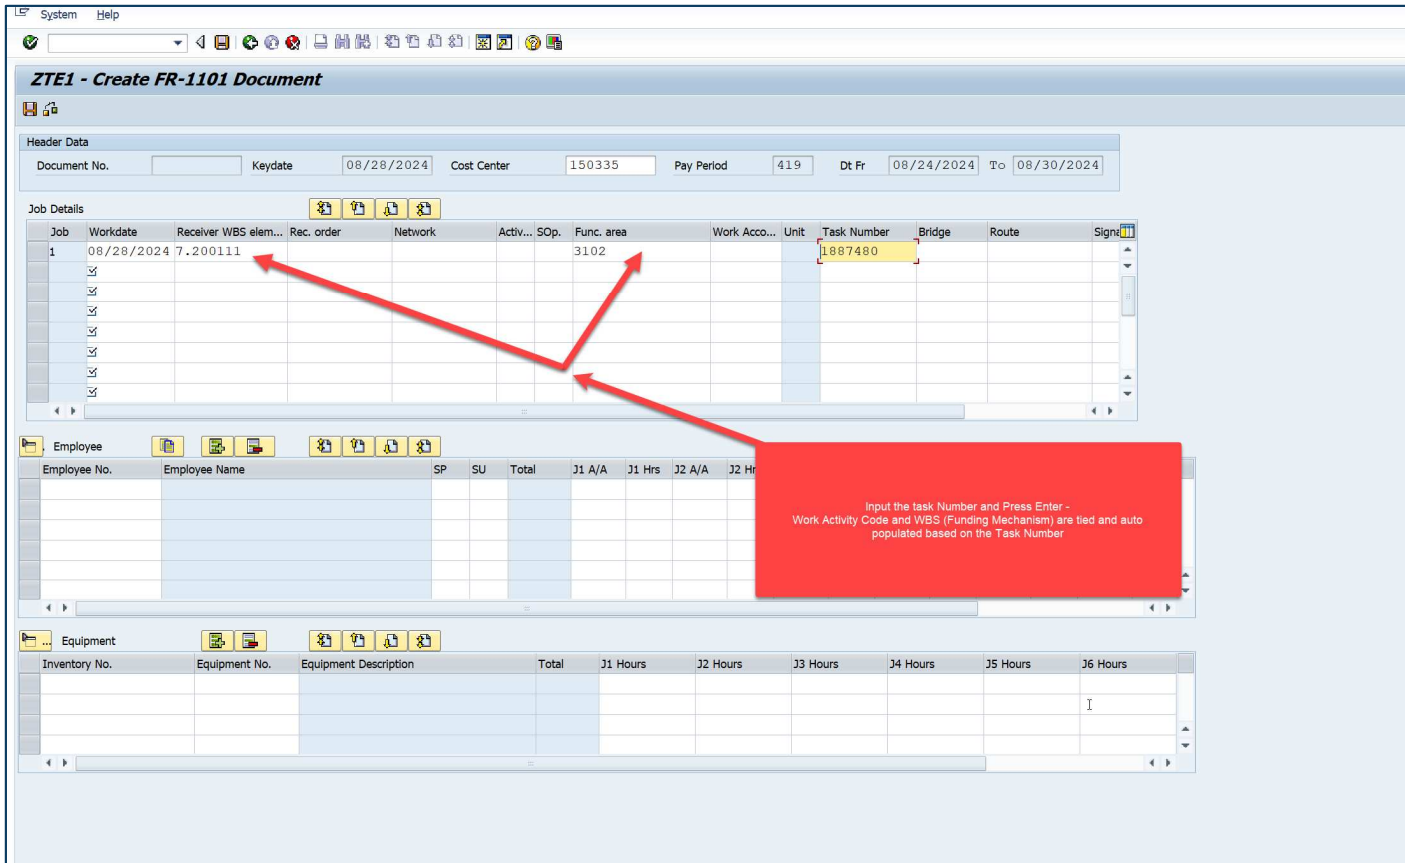

NCDOT – Cost Capture – Past/Present

- Originally – All Data was manually entered
- System Improvement – Creation of database trigger in AMS to send WO data to SAP and auto populate.
- Task Data Prepopulated – Data Improvement

- Capture of external costs / invoices. Similar for internal costs

- Verified / validated data into AMS from SAP

- NCDOT Goal – Cost data to Route / Asset
- Creation and capture of Cost data

NCDOT – Cost Capture - Present

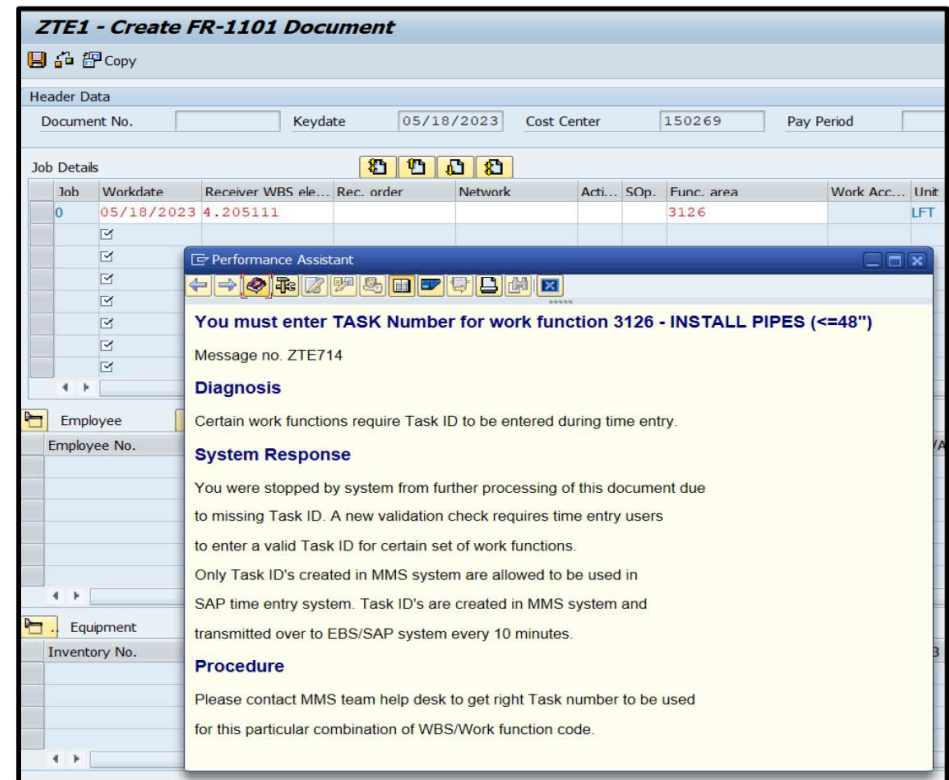

Work Activity Required Location Granularity

- Short list of critical work functions sent to all Division Offices Statewide
- Field crews are required to task these activities within AMS system
- Required level of granularity is listed as a minimum requirement when using these work functions

ArTEMIS Work Function List		ArTEMIS →
Functional Area	Functional Area Name	ArTEMIS (Granularity)
2817	Mechanical Asphalt Patching (TON)	Y (Route)
2817C	Mechanical Asphalt Patching (TON)	Y (Route)
2818	Full / Partial Depth Asphalt Pavement Repair (TON)	Y (Route)
2818C	Full / Partial Depth Asphalt Pavement Repair (TON)	Y (Route)
2908	Brush and Tree Control /Herbicides (SHM)	Y (Route)
2911	Manual Brush and Tree Control (SF)	Y (Route)
2912	Mechanical Brush and Tree Control (SHM)	Y (Route)
3108	Drainage Ditch Maintenance (SHM)	Y (Route)
3109	Maintenance of Shoulders AND Ditches (SHM)	Y (Route)
3111	Minor Shoulder and Drainage Ditch Maintenance (LF)	Y (Route)
3112	Shoulder Maintenance / Reconstruction (SHM)	Y (Route)
3115	Slope Repair (EA)	Y (Route-MP)
3115C	Slope Repair (EA)	Y (Route-MP)
3120C	Install / Repair / Maintain Barriers (LF)	Y (Route-MP)
3122C	Maintenance Repair and Replacement of Attenuators (EA)	Y (Route-MP)
3126	Install Pipes (48" or Less) (LFT)	Y (Inventory or Route-MP)
3126C	Install Pipes (48" or Less) (LFT)	Y (Inventory or Route-MP)

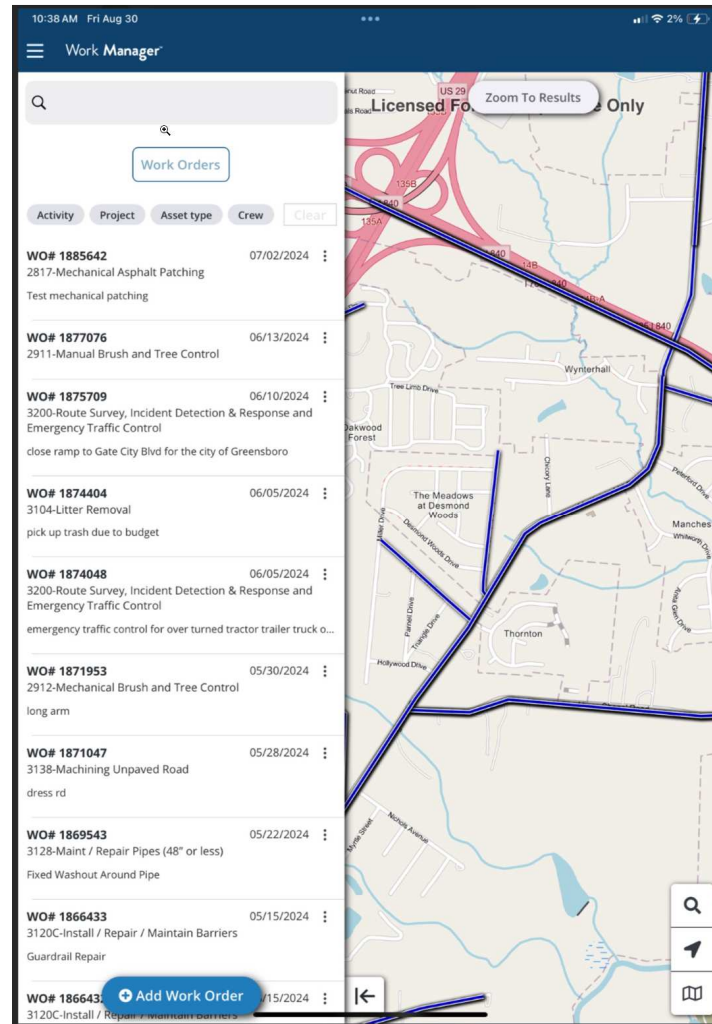

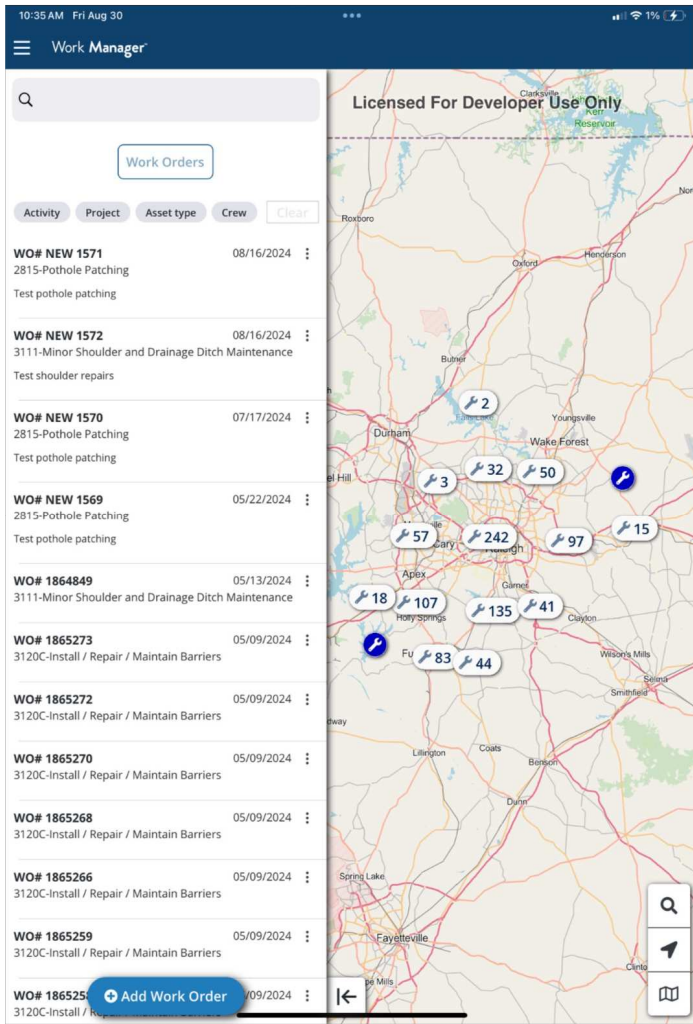

Work Activity Location Validation - System Error Message

- Error message generated if conditions for entry are not met
- Text box pop-up explains to field user that certain work functions require a Task ID to be entered
- Response / Procedure is conveyed to the users so that the error can be fixed
- This "hard-stop" ensures that charges to certain work activities are tied to a mappable location

NCDOT – Cost Capture - Future

NCDOT - Capturing and Integrating Cost Data into Maintenance Management Systems

Cost Capture – Continuous Process Improvement

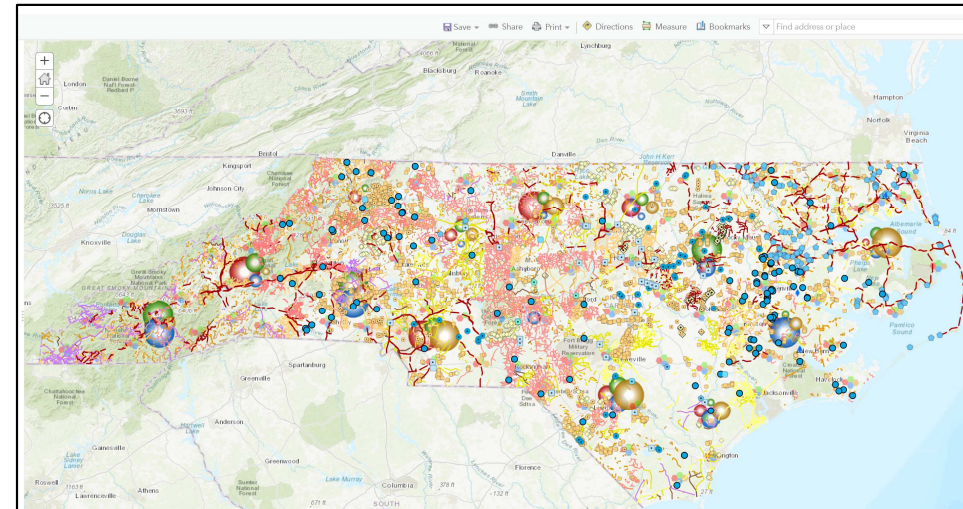

- Continue to review ideas to simplify cost capture process
- Review management system process changes / latest technology
 - Automated capture – Tablets / Phones
 - New tools – SAP
- Pre-Populate Time Entry Documents – Auto populate SAP from MMS
- Combining processes to prevent loss of data (combining CARS & Work Orders processes)
- Combining capture of employee time / equipment hours with Work Order creation
- Reviewing/Adding to Work Activity lists that require Work Orders

NCDOT – Cost Capture – Lesson Learned

Lessons Learned

- Make Cost Capture Easy – Think purchasing something online
 - Automate as much as possible (RFID, Bar Code, GPS location, etc.)
- Keep your goal in mind – Map!
 - Data Granularity alignment (asset level, road, etc.)
 - Input = Output
 - Don't capture unless you need it!
- Create data validation processes
 - Compare SAP to MMS – Good for both Systems
 - Improve data transparency –
 - More eyes = Additional validation
- Capture data as soon as possible
 - Data in field as it is occurring

Thank you!

TRB Webinar: Capturing and Integrating Cost Data into Maintenance Management Systems

Implementing cost interfaces in WV MMS

Christopher Chau, P.Eng
Deighton Associates Limited

September 26, 2024

Agenda

- Project Background
- Implementation Details
- Lessons Learned

Project Goal

Create a state-of-the-art Transportation Asset Management System (TAMS)

- *Expand* existing dTIMS implementation and establish a comprehensive Asset Registry “TAI” that is integrated with the LRS
- *Replace* MMS functionalities in REMIS with dTIMS OM that is integrated with the state’s financial system “wvOASIS”

...to further the mission of data driven asset management at WVDOT

state-of-the-art

Expand existing dTIMS implementation and establish a comprehensive Asset Registry “TAI” that is integrated with the LRS

- Integrate the LRS in dTIMS with R&H
- Synchronize LRS changes from R&H into dTIMS
- Locate assets on the LRS when appropriate

The underlying goal is to enable an asset-based approach to maintenance management.

state-of-the-art

Replacement of the MMS functionalities in REMIS with dTIMS OM that is integrated with the state's financial system "wvOASIS"

- Configure and enhance the dTIMS OM module
- Track activities
 - Against assets / network location, Against maintenance needs.
- Provide activity estimates
 - Based on statewide and/or localized Performance Standards.
- Capture and centralize actual costs of maintenance activities
 - Including Labor, Equipment, Material, and *Other* costs via data interfaces / data integrations.
- Integrated with wvOASIS
 - System Integration via Web Services where available.
 - Data Integration via other methods where possible.

Cost Interface: Vision/Concept

Assumed Interfaces to Support Closing of Work in MMS, Mott MacDonald, 2020

Integration Interface Goals

- Ensure all costs incurred on Task Orders are tracked back into the MMS
- Consolidate actual costs of maintenance activities from the various pathways (Labor, Equipment, Materials, *Other*)
- Support the transition from Activity-based to Asset-based maintenance management
- Provide ground truth data to support the continuous improvement of maintenance activity performance standards

Things to Consider

Cost Interfaces – Things to Consider

Dedicated MMS Implementation Team

- Consider
 - Clear mandate
 - Institutional knowledge of your DOT and maintenance department
 - OCM skills: Cross functional coordination, Presentation, Training
 - Access to experienced ERP and MMS Implementation experts
 - Access to the implementers/developers of the financial system
 - Visibility into other activities around the ERP

Cost Interfaces – Things to Consider

Collaboration Environment

- Consider
 - Establishing a holistic development environment early
 - Test early and iteratively push stable functionalities into Staging / Production environment
 - Practice production migration as early as feasible

IT and Data Governance

- Consider
 - Clearly identify data owner, stewards, and consumers
 - Ensure SOPs are updated to reflect required modification to master data
 - Be sensible around private information, even if it is publicly available

Cost Interfaces – Things to Consider

Requirements Analysis and Design

- Consider
 - Internally collate Use Cases/User stories with data samples from multiple districts / area
 - Invest in the development of real-world test data and test scenarios as early as possible
 - Design for failure

Stakeholder Turnover

- Consider
 - Phased/Iterative approach with clear goals for each phase
 - Formally capture stakeholder comments in project documentation
 - Practice feature rollout and release often

Cost Interfaces – Things to Consider

COTS Systems Flexibility

- Consider
 - How are unique identifiers handled
 - Ability to customize the data schema to support the integration interfaces
 - Ability to customize the user interface to implement validation logic and calls to web services
 - Ability to incorporate customization into standardized features
 - Does the system expose a modern API

Interface or Integrate

- Consider
 - System capabilities
 - Time criticality
 - Payroll cycles

Cost Interfaces – Things to Consider

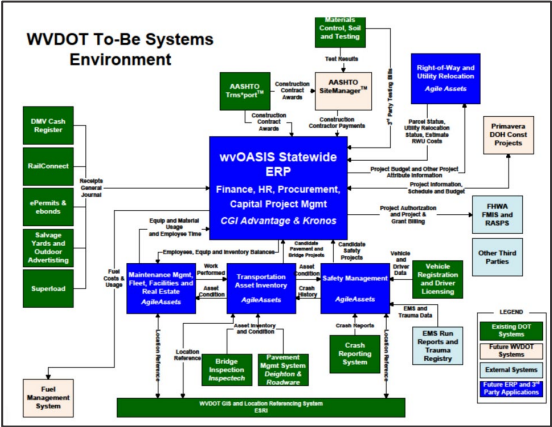

“Out of the box” vs Custom Integration

- Consider
 - Support for updates/lack of updates when the ERP / MMS receive updates in the future
 - Ongoing maintenance/enhancement capability vs cost

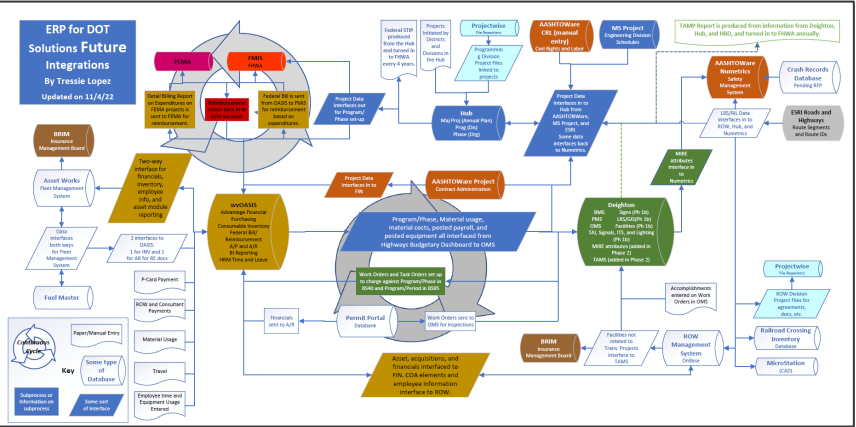

User Experience

- Consider
 - Eliminate “Double Entry” where possible
 - Reduce the need for a user to be in two systems
 - Eliminate round-trips between systems where possible
 - Visualize the integrated data via Map views, Dashboards

Embrace Continuous Improvement

WVDOT ERP Integrations Plan in 2014

WVDOT ERP Integrations Plan in 2022

Do:

- Include future ambitions in plans
- Update, Review, Publish plans regularly
- Plan, test and practice system upgrades
- Design interfaces to be low-coupling

Don't:

- Mix current needs with anticipated needs
- Leave plans in "Perpetual Draft"
- Ignore system upgrades and security patches
- Over-design interfaces to future proof

Thank you!

Register for the 2025 TRB Annual Meeting!

*January 5 – 9, 2025
Washington, D.C.*

Subscribe to *TRB Weekly*

If your agency, university, or organization perform transportation research, you and your colleagues need the *TRB Weekly* newsletter in your inboxes!

Each Tuesday, we announce the latest:

- RFPs
- TRB's many industry-focused webinars and events
- 3-5 new TRB reports each week
- Top research across the industry

Spread the word and subscribe!
