

**Final Updates to
National Ambient Air Quality Standards
(NAAQS)
for Ozone**

October 2015

What we'll cover

2015 Final 8-hour Ozone Standards

Primary: 70 ppb

Secondary: 70 ppb

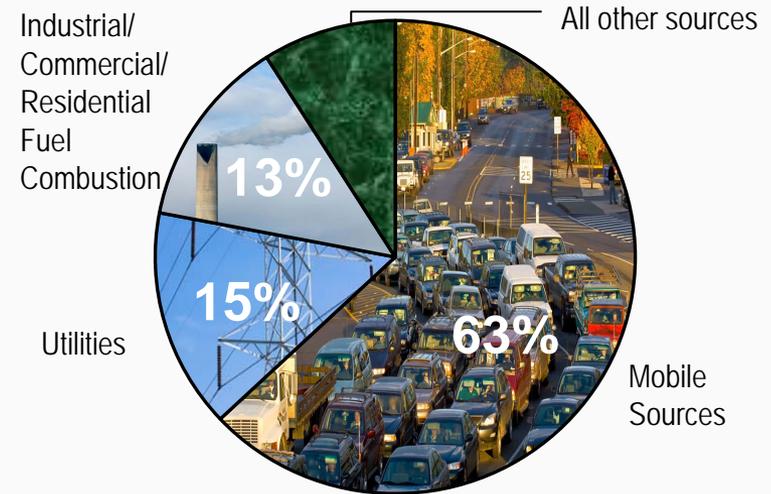

Areas will meet the standards if the 4th highest daily maximum 8-hour ozone concentration per year, averaged over three years, is equal to or less than 70 ppb.

- Updated standards
- Extension of the Ozone Season
- Implementation
 - Designations
 - Ozone implementation rule
 - Attainment plan deadlines and attainment dates

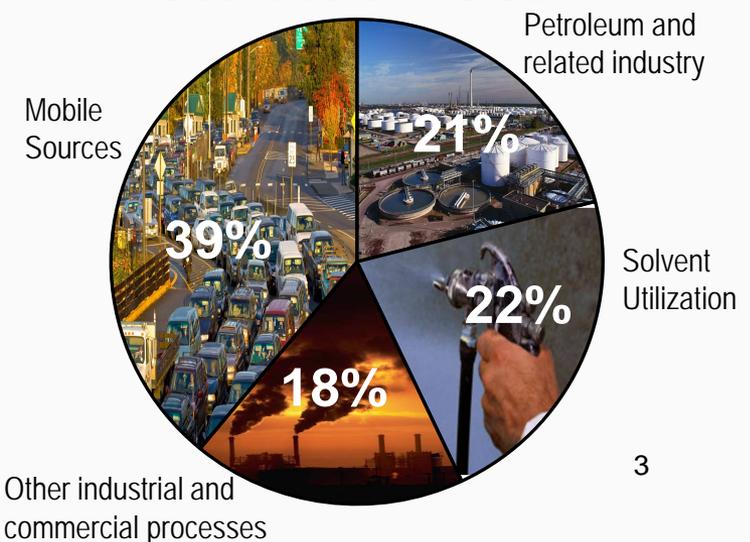

About Ozone

- Forms in the atmosphere from nitrogen oxides (NOx) and volatile organic compounds (VOCs)
- Most commonly elevated in the warm summer months.
- But in parts of the western U.S. with high local VOC and NOx emissions, ozone has formed when there is snow on the ground.
- Not just a city pollutant: ozone, and the pollutants that form it, can travel long distances on the wind, leading to high ozone even in rural areas.

Sources of NOx

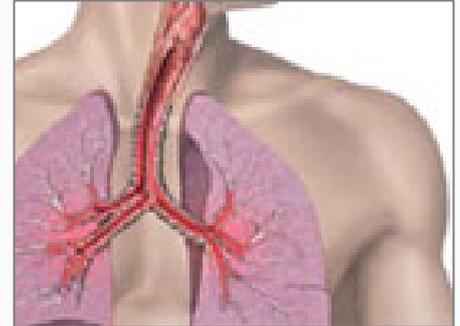

Sources of VOCs

Ozone is Linked to Serious Health Effects

A large body of scientific evidence shows that ozone:

- Causes coughing and sore throat or burning sensation in airways
- Reduces lung function, making it harder to breathe deeply
- Inflames and damages the airways
- Aggravates lung disease, including asthma, emphysema and bronchitis
- Increases the frequency and severity of asthma attacks
- Repeated ozone damage to developing lungs can affect children into adulthood, causing permanent reduction to the lungs' ability to function, and is likely to be one of the many causes of asthma development.

These effects can lead to:

- More medication use for people with asthma
- More frequent visits to the doctor
- Missed school days
- Missed work days
- More emergency room visits and hospital admissions
- Increased risk of premature death

Update to the Primary Standard

Updated Standard– Primary

The Clean Air Act charges the EPA Administrator with setting primary standards that are *requisite* to protect public health with an adequate margin of safety.

In setting the primary ozone standard, the Administrator:

- Examined the body of scientific evidence on ozone and health
 - Evidence expanded significantly since EPA last reviewed the ozone standards in 2008.
 - Important new studies available since 2008.
 - **New clinical studies** -- provide the most certain evidence of health effects in adults; clearly show ozone at 72 ppb can be harmful to healthy, exercising adults.
 - Clinical studies also show effects in some adults following exposures to ozone concentrations as low as 60 ppb; however, there is greater uncertainty that these effects are adverse.

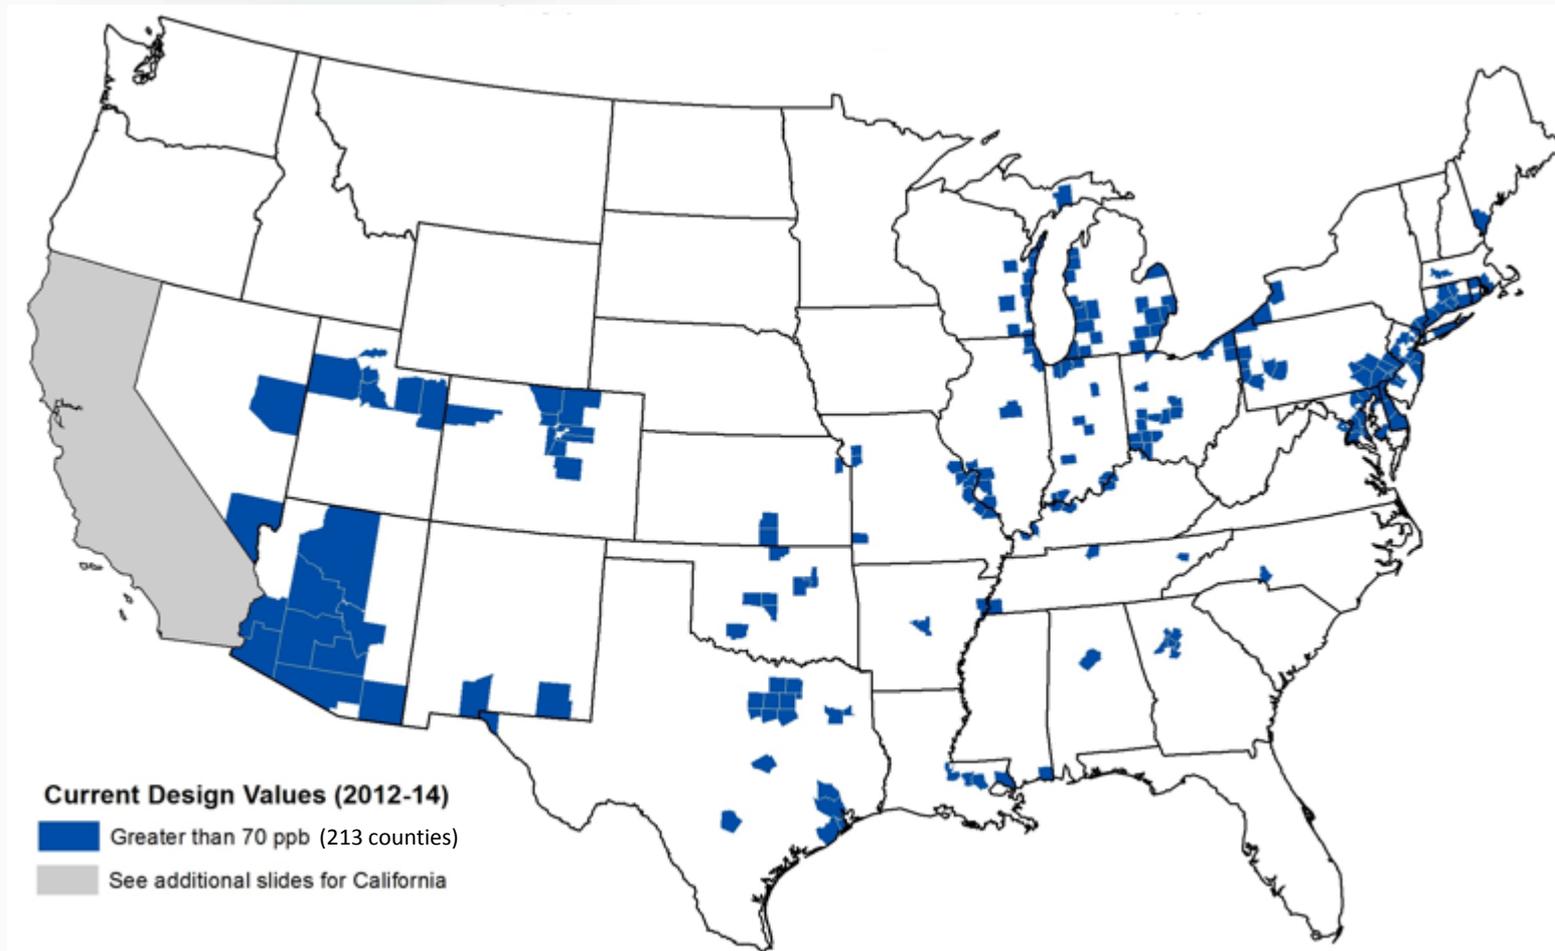

Updated Primary Standard, cont.

- The Administrator also reviewed results of analyses of exposure to ozone and looked at how different levels of the standard would reduce risk.
 - Analyses take into account how people are exposed to ozone in their daily lives.
 - Focused on risks to children, particularly from repeated exposures.
- Administrator also considered advice from the Clean Air Scientific Advisory Committee (CASAC) and public comments on the proposal.
 - CASAC concluded that the science supports a standard level within a range of 70 ppb down to 60 ppb, noting that the decision about what standard provides an adequate margin of safety is a judgment left to the Administrator.

Updated Standard – Primary (cont.)

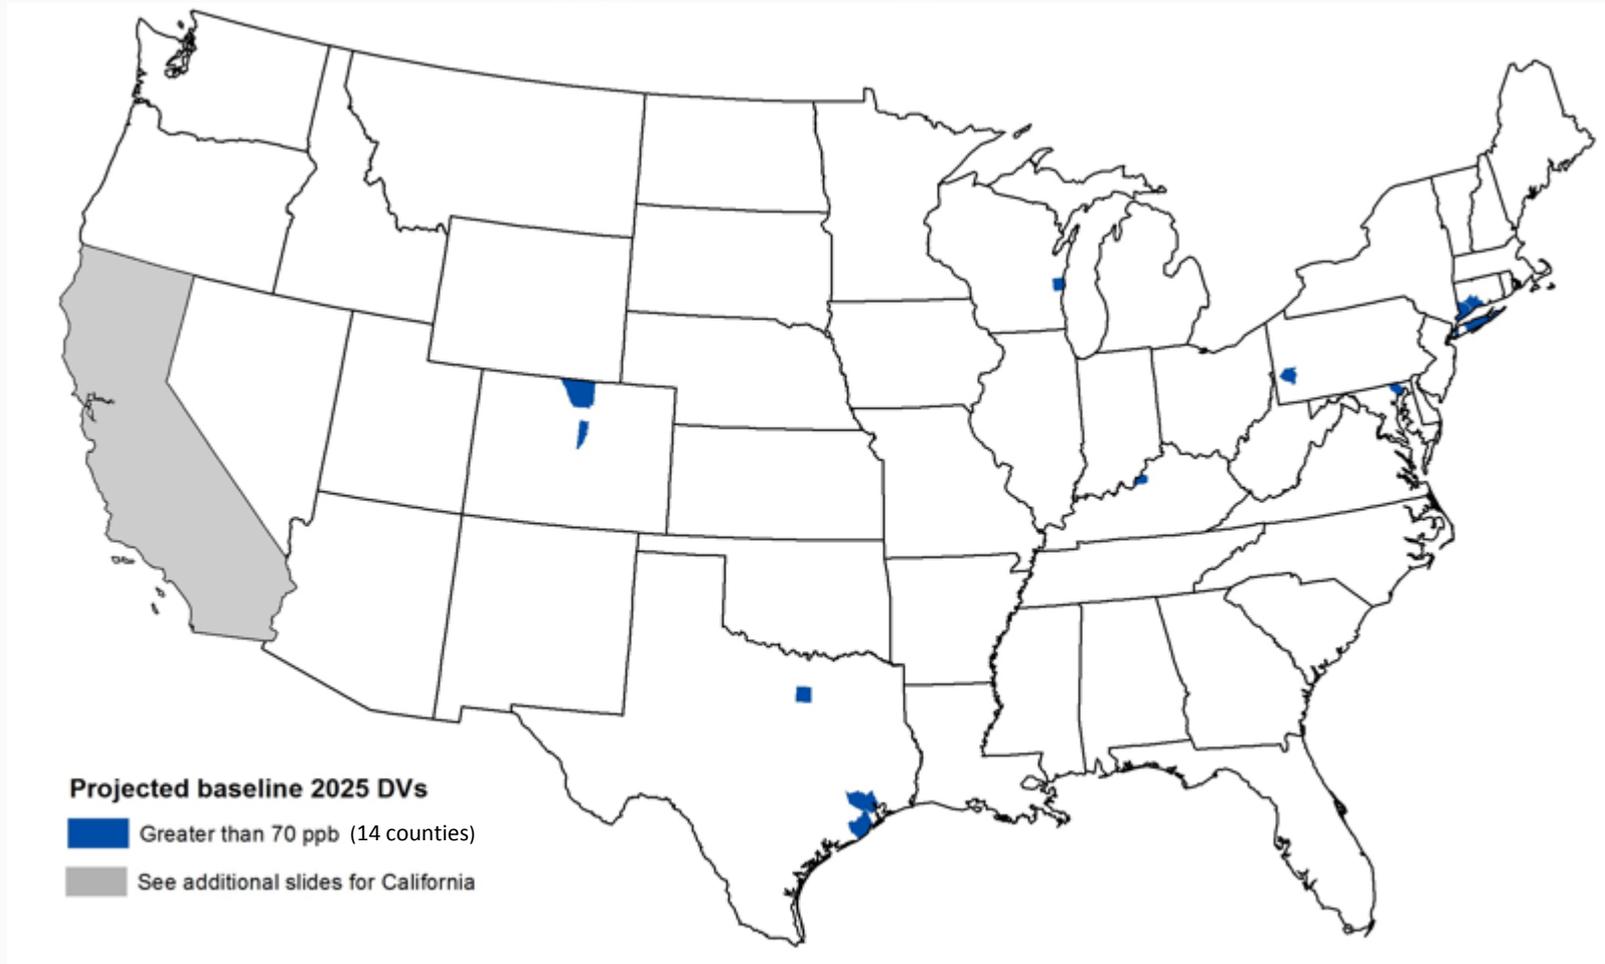

- Based on the science, the Administrator has determined that the **2008 standard was not adequate to protect public health.**
- **She revised the standard level to 70 ppb, which:**
 - Is requisite to protect public health with an adequate margin of safety.
 - Is below the lowest exposure level shown to cause adverse health effects in clinical studies.
 - Essentially eliminates exposures shown to cause adverse health effects, protecting 99.5 % of children from even single exposures to ozone at 70 ppb.
 - Substantially reduces exposures to ozone levels lower than 70 ppb, reducing multiple exposures to 60 ppb by more than 60%.
 - Repeated exposures are important, because the more times children are exposed to ozone, the more likely they will experience serious health effects.

Counties with Monitors Measuring Ozone Above 70 ppb (based on 2012 to 2014 monitoring data)

Note: This map shows counties with monitors. EPA will designate attainment and nonattainment areas in late 2017, likely based on 2014-2016 monitoring data. Nonattainment areas could include entire counties or partial counties.

EPA projects the vast majority of counties would meet the updated standards in 2025

Note: This map shows counties with monitors.

Source: Regulatory Impact Analysis for the 2015 Ozone Standards

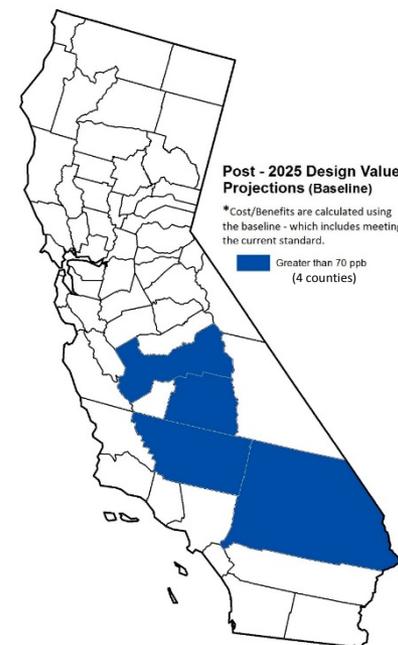

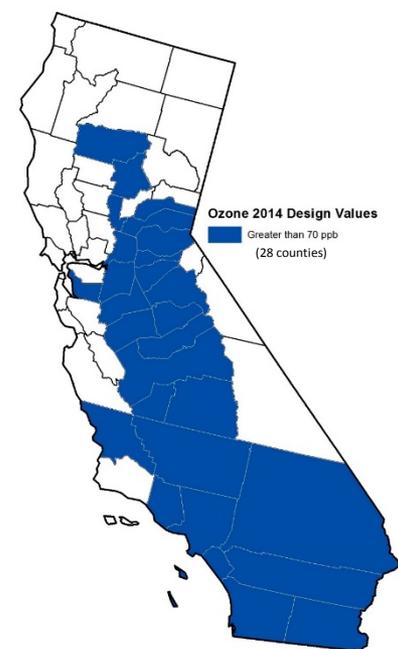

Reducing Ozone In California

The map at top shows counties with monitors measuring ozone above 70 ppb based on 2012-2014 data.

The bottom map shows EPA's projections of the California counties with monitors that would violate the updated ozone standard of 70 ppb, after the state meets the 2008 ozone standards of 75 ppb, and after implementation of proposed and final federal and state rules.

EPA recognizes that achieving the reductions to meet the 2008 standards will be particularly difficult in California, which has unique challenges in addressing ozone pollution.

For California's nonattainment areas to meet the updated ozone standards, the state and EPA have recognized that transformational change is likely needed, such as a transition to largely zero or near-zero emission vehicle technologies, and a significant turnover of the legacy fleet of vehicles, among other changes.

Note: Maps show counties with monitors. Actual nonattainment areas could cover partial counties..

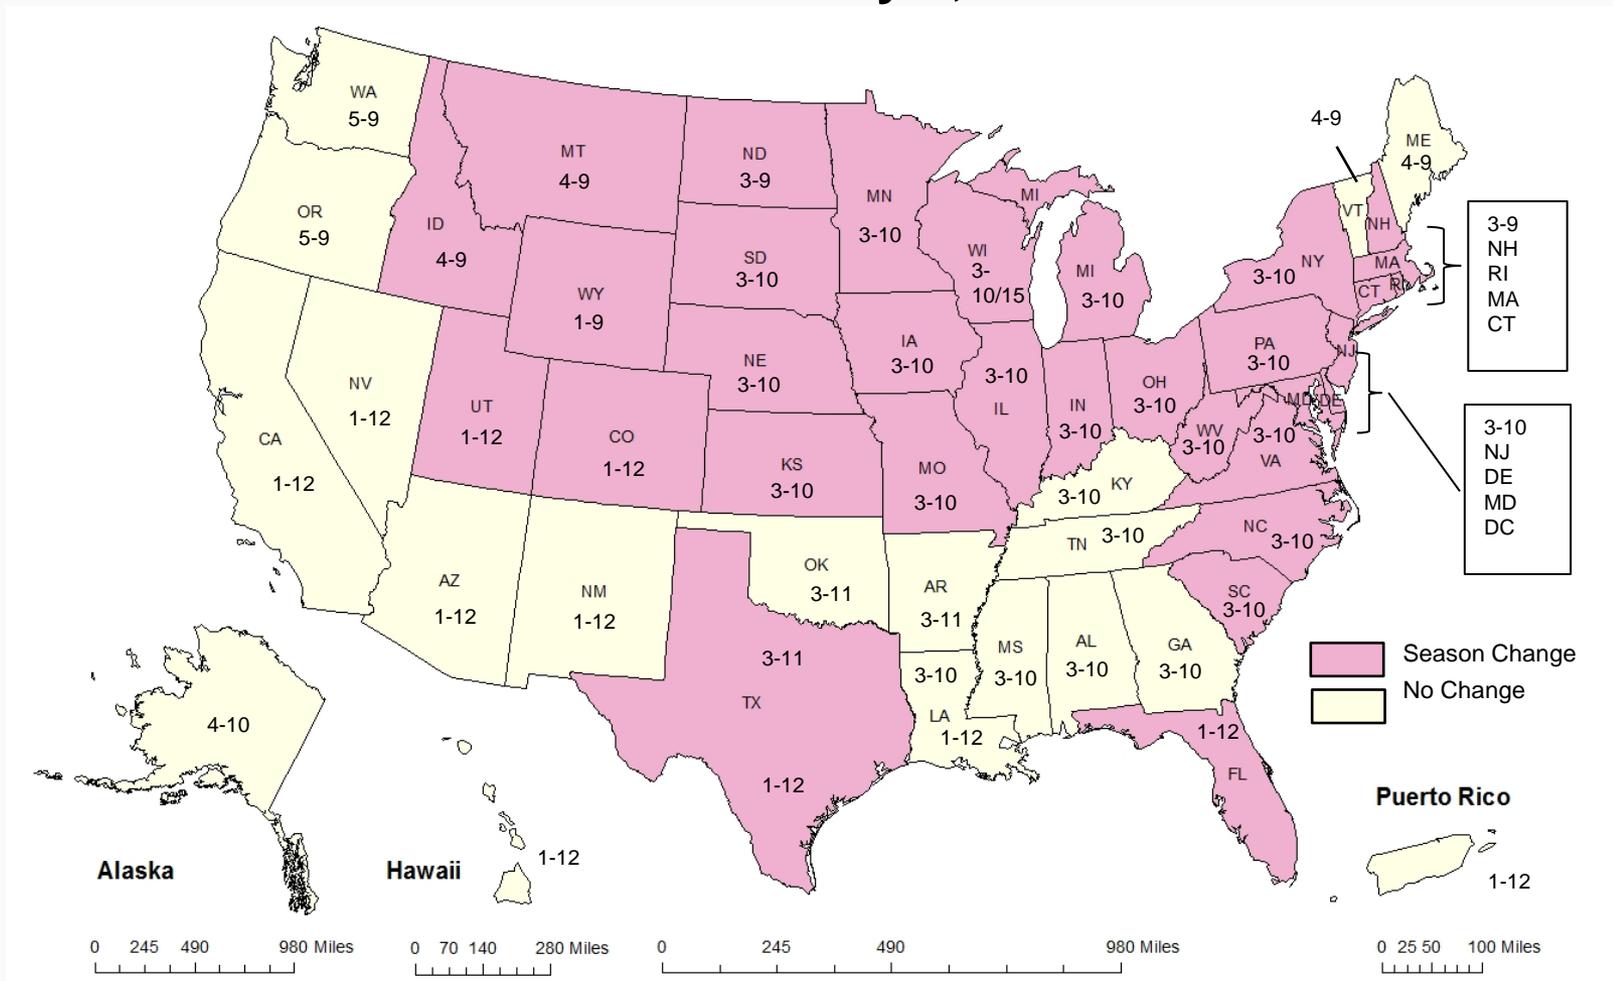

Extension of the Ozone Season

Ozone Monitoring Season

- Final rule extends ozone monitoring season for 32 states and D.C.
 - One month extension for 22 states and D.C.;
 - Additional extensions of two months to seven months for 10 states, including states where ozone can be elevated during the winter;
 - Year-round seasons for all NCore multi-pollutant sites.
- All waivers are revoked when the rule becomes effective (60 days after publication in the Federal Register)
 - Regions and states with existing waivers should pursue new waivers as appropriate.
 - Regional Administrators will still be allowed to approve changes to states' ozone monitoring seasons without rulemaking.
- Does not affect the CSAPR trading program ozone season (remains May 1 – Sept 1).

Ozone Monitoring Seasons

Effective January 1, 2017

Implementation

Meeting the Standards

Existing and proposed federal rules will help states meet the standards by reducing ozone-forming pollution. These rules include:

- Regional Haze regulations;
- Mercury and Air Toxics Standards;
- Clean Power Plan;
- Tier 3 Vehicle Emissions and Fuels Standards;
- Light-Duty Vehicle Tier 2 Rule;
- Mobile Source Air Toxics Rule;
- Light-Duty Greenhouse Gas/Corporate Average Fuel Efficiency Standards;
- Heavy-Duty Vehicle Greenhouse Gas Rule;
- Reciprocating Internal Combustion Engines (RICE) NESHAP;
- Industrial/Commercial/Institutional Boilers and Process Heaters MACT (and amendments); and
- Requirements to reduce the interstate transport of air pollution.

Implementation Updates

- Implementation memo
- Designations schedule
- Ozone implementation rule
- Attainment plan deadlines and attainment dates

Memo from Acting Assistant Administrator

- EPA will work with state, tribal, local and federal agencies to implement the updated standards in a way that maximizes common sense, flexibility and cost-effectiveness, while following the requirements of the Clean Air Act.
- Memo issued with the revised standards outlines the agency's plans for addressing issues related to:
 - Guidance available to agencies;
 - Ensuring major source permitting is effective and efficient;
 - Designating areas;
 - Background ozone;
 - Interstate ozone transport;
 - The challenges of reducing ozone in California;
 - Managing monitoring networks;
 - Emissions from wildland fires; and
 - Transportation planning.
- Memo available at: <http://go.usa.gov/3SRhR>

Designations Schedule

- **By February 2016:** EPA issues area designations guidance
- **By October 1 2016:** States' (and any tribes that choose to do so) recommendations due
- **By June 1, 2017:** EPA responds to states' and tribes' initial recommendations and identifies where the agency intends to modify the recommendations.
 - States and tribes will have the opportunity to comment on EPA's response and to provide new information and analyses for EPA to consider.
- **By October 1, 2017:** EPA issues final area designations; those designations likely would be based on 2014-2016 air quality data.
 - Early-certified 2017 data may also be relevant to final designations.
 - Exceptional event demonstration submission deadlines:
 - October 1, 2016 for 2014-2015 events
 - May 31, 2017 for 2016 events
 - May 31, 2018 for 2017 events

Ozone Implementation Rule

- Would cover any nonattainment area classification thresholds and any necessary updates to the 2008 Ozone NAAQS State Implementation Plan Requirements Rule.
- Update the SIP due dates for emissions inventories, RACT, attainment plans/demos, RFP plans, contingency measure plans, section 185 programs.
- Address ongoing implementation for 2008 NAAQS, including revoking the 2008 NAAQS and anti-backsliding provisions.

SIP Deadlines and Attainment Dates

- **2020 to 2021:** Attainment plans and demonstrations due for nonattainment areas classified as “Moderate” and above.
- **2020 to 2037:** Nonattainment areas are required to meet the primary (health) standard, with deadlines depending on the severity of an area’s ozone problem.

Attainment Schedule by Classification	
Classification	Schedule to Attain
Marginal	3 years from date of designation
Moderate	6 years
Serious	9 years
Severe	15 to 17 years
Extreme	20 years

*Areas must attain as expeditiously as practical, but not later than the schedule in the table.
Two one-year extensions are available in certain circumstances based on air quality.

Appendix

Implementation-Related Rules & Guidance

- Current and draft guidance that will apply to the updated standards:
 - **Guidance on Infrastructure State Implementation Plan (SIP) Elements** under CAA Sections 110(a)(1) and 110(a)(2) – September 13, 2013 (<http://www.epa.gov/airquality/urbanair/sipstatus/infrastructure.html>)
 - **Draft Emissions Inventory Guidance for Implementation of Ozone [Particulate Matter] National Ambient Air Quality Standards (NAAQS) and Regional Haze Regulations** – April 2014 (<http://www3.epa.gov/ttn/chief/eidocs/eiguid/index.html>)
 - **Draft Modeling Guidance for Demonstrating Attainment of Air Quality Goals for Ozone, PM_{2.5}, and Regional Haze** – December 2014 and **Guidance on the Use of Models and Other Analyses for Demonstrating Attainment of Air Quality Goals for Ozone, PM_{2.5}, and Regional Haze** – April 2007 (http://www.epa.gov/scram001/guidance_sip.htm)

Implementation-Related Rules & Guidance, cont.

- Current rules that apply to the revised NAAQS:
 - **Revisions to the General Conformity Regulations** (75 FR 17254, April 5, 2010) and guidance (40 CFR part 93, subpart B and 40 CFR part 51, subpart W)
(<http://www3.epa.gov/airquality/genconform/regs.html>)
 - **Transportation Conformity Rule** (77 FR 14979, March 14, 2012) and **Guidance for Transportation Conformity Implementation in Multi-Jurisdictional Nonattainment and Maintenance Areas** – February 2012 (40 CFR part 93, subpart A and 40 CFR part 51, subpart T)
(<http://www3.epa.gov/otaq/stateresources/transconf/index.htm>)

Upcoming Implementation-Related Rules/Guidance/Activities

- Area designations guidance (including rural transport areas)
- Nonattainment area classifications and attainment dates rule
- Updates to nonattainment area SIP requirements rule, including possible anti-backsliding provisions for 2008 NAAQS
- Nationwide interstate transport contribution assessment
- Updates to transportation conformity guidance
- White paper and workshop on background ozone issues

Ozone Transport

Addressing Interstate Ozone Transport – 2008 Standards

- Many states still do not have approved transport SIPs for the 2008 Ozone NAAQS.
- With the Supreme Court ruling and subsequent Circuit Court rulings on CSAPR, EPA plans to move forward with addressing transport using the CSAPR framework, updated for the 2008 NAAQS:
 - “Backstop” FIP rule for states in the Eastern U.S. was proposed November 16, 2015. Focuses on near-term EGU measures that can be in place by 2017 (synchronized with Moderate area attainment deadline).
 - A Notice of Data Availability (NODA) covering 2011 and 2017 emissions data along with air quality contribution modeling results used in the proposal were published on July 23, 2015. Comment period closed October 23, 2015.
- States in the Western U.S. are not covered by the proposed rule. The EPA is working with these individual states to determine transport SIP requirements.

Addressing Interstate Ozone Transport – 2015 Standards

- The CSAPR framework will help EPA and the states make progress on transport issues for the 2015 ozone NAAQS.
- Transport SIPs are a state obligation; however, EPA can assist states with some of the technical analyses related to transport.
- EPA is planning to do source apportionment modeling to provide contribution information for the 2015 NAAQS to help states begin developing their 110 SIPs (due October 2018).
 - Intend to make this information available in Fall 2016.
