

Enhancing Airport Land Use Compatibility

Thursday, September 2, 2010

Session Duration: 120 minutes

Encroachment of incompatible land uses around airports is a significant national problem. TRB's Airport Cooperative Research Program (ACRP) has released a report that provides guidance to help protect airports from incompatible land uses that impair airport and aircraft operations and safety. Panelists will discuss the findings of the report including stakeholder responsibilities, federal regulations, economic and safety concerns, and tools and techniques that can be used to facilitate land use compatibility.
