

Powering Airports with Spatial Webwith

Dan Mapes
Founder/President

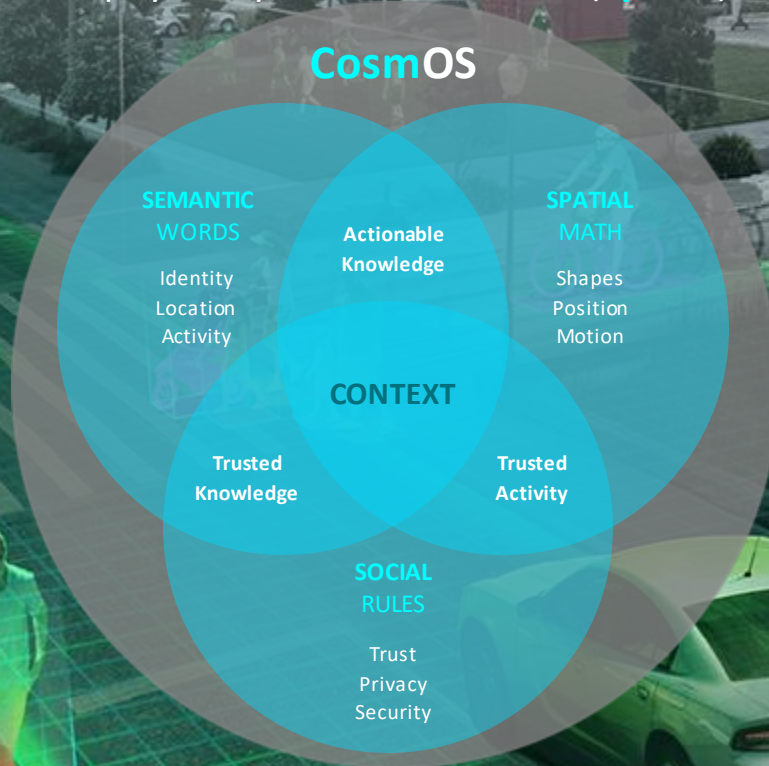

CONTEXT IS EVERYTHING

A complete and coherent digital model of the world must accurately and holistically represent **Spatial**, **Semantic**, and **Societal** data and the relationships between them.

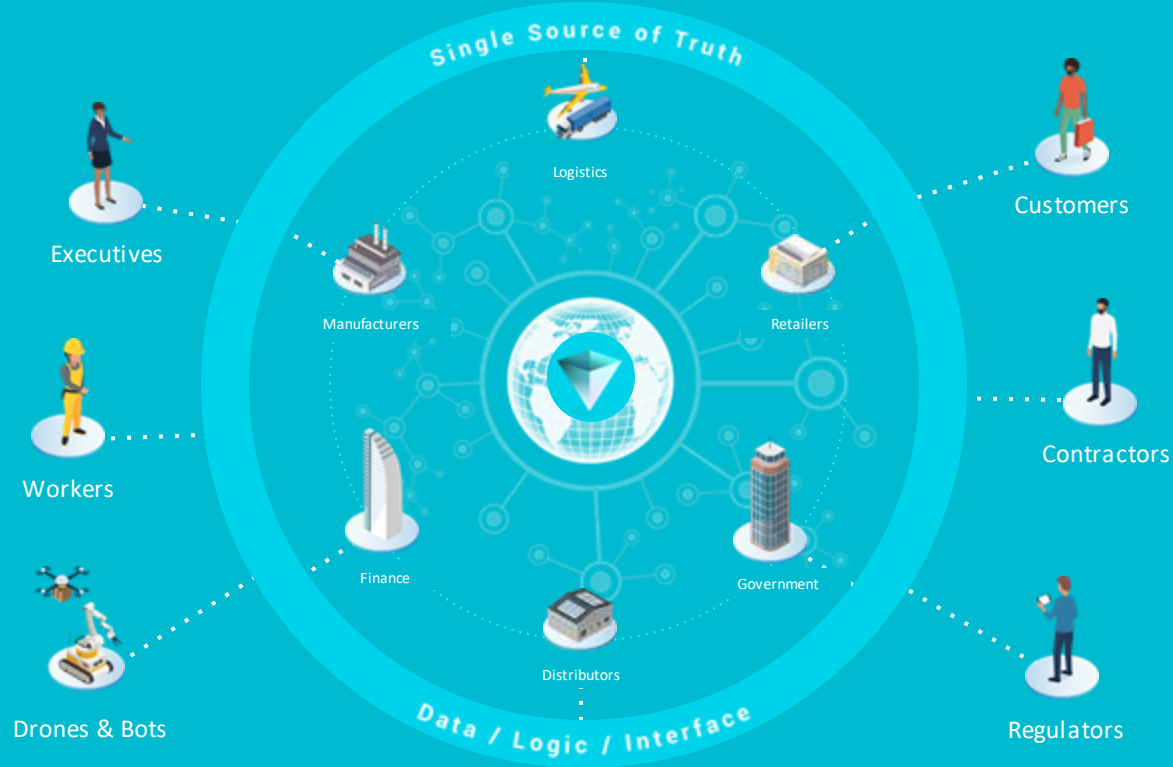

A COMPLETE CONTEXT

Permission-based (**Societal**) digital information and instructions about the world (**Semantic**)
Presented in a physically coherent context (**Spatial**) in the world.

COLLABORATION

Interoperability combined with **spatial management** fosters trust and multi-party **collaboration** which unlocks the exponential value of networks and enables a **Smart World** with an **autonomic digital economy**.

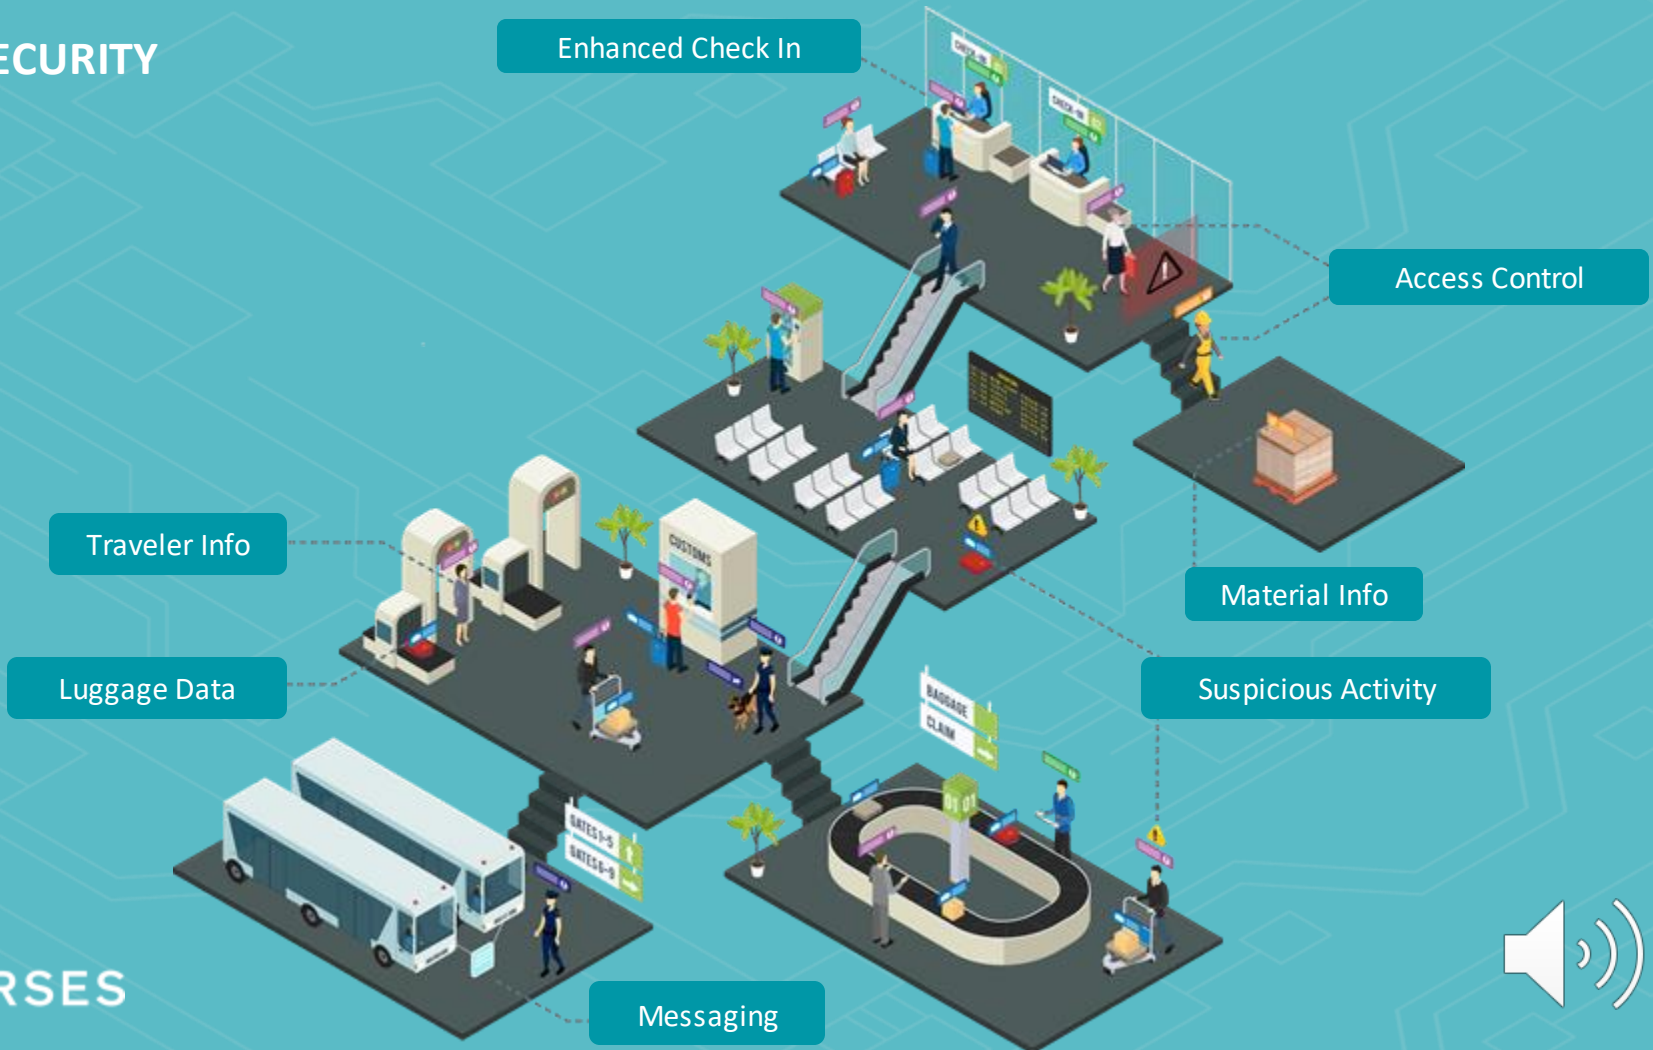

Potential Use Cases

2020 - 2025

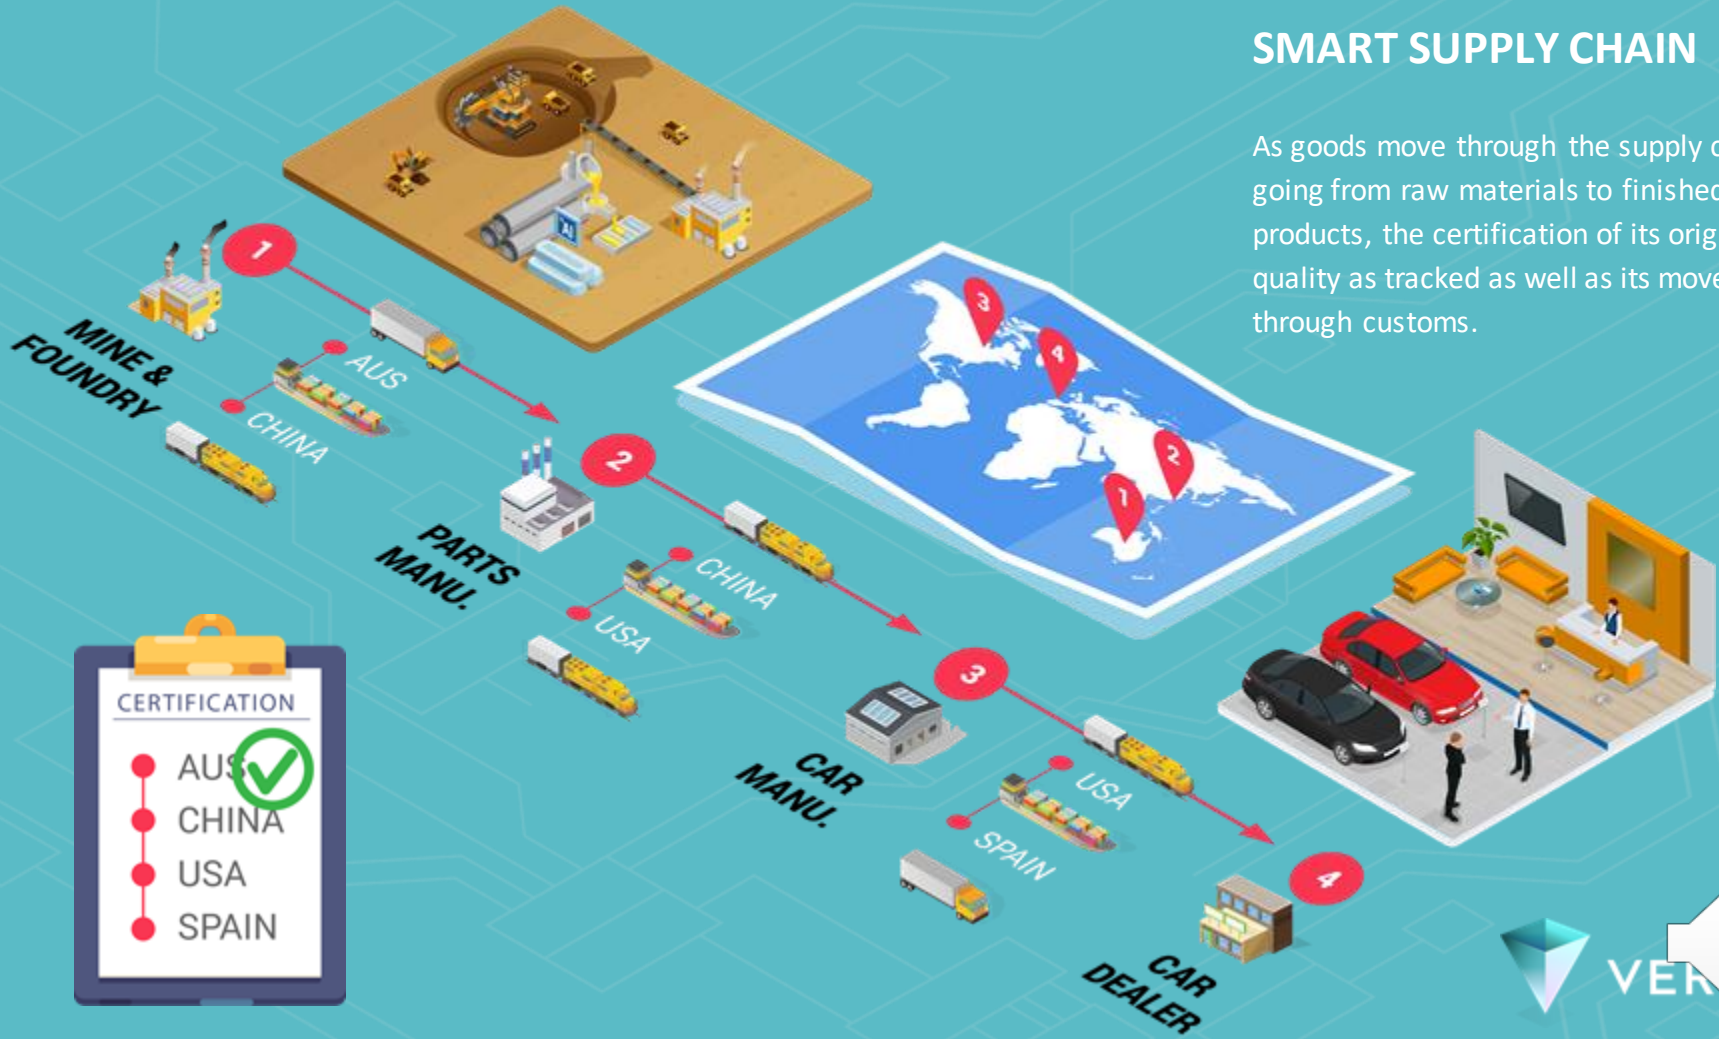

SMART SECURITY

SMART SUPPLY CHAIN

As goods move through the supply chain, going from raw materials to finished products, the certification of its origin and quality as tracked as well as its movement through customs.

CERTIFICATION

- AUS ✓
- CHINA
- USA
- SPAIN

SMART WORLD

When you combine the world's resources, supply chain and governments with AI and optimization, we can truly understand and manage planet's economies, environment and civilization like never before.
