## Appendix K

## Design Examples

Example 1 ${ }^{*}$ Two-Span I-Girder Bridge Continuous for Live Loads

## (a) Bridge Deck

The bridge deck reinforcement using A615 rebars is shown below.

[^0]Redesign by using A1035 bars with $\mathrm{f}_{\mathrm{y}}=100 \mathrm{ksi}$.
$3,483(12)=0.90 A_{s}(100)\left(58.25-\frac{A_{s}(100)}{1.7(7.0)(26)}\right) ; \quad A_{s}=8.36$ in $^{2}$
Provide 28 \# 5 bars ( 14 on the top with 2.5 " cover and 14 on the bottom with $25 / 8^{\prime \prime}$ cover). The bars will be at 8 " o.c. Note: A1035 bars are not epoxy coated; hence, the cover is 2.5 ".

The centroid of the bars from the top is
$\bar{x}=\frac{14 \times(2.5+0.5 \times 5 / 8)+14(8.5-(2+5 / 8+0.5 \times 5 / 8))}{28}=4.12^{\prime \prime}$
Crack control reinforcement:
$s \leq \frac{700 \gamma_{e}}{\beta_{s} f_{s}}-2 d_{c}$
$\gamma_{\mathrm{e}}=0.75$
$f_{s}=$ Tensile stress in steel reinforcement at the service limit state.
$d=62.5-4.12=58.4^{\prime \prime}$
$\rho=\frac{A_{s}}{b d}=\frac{28 \times 0.31}{(26)(58.4)}=0.0057$
$k=\sqrt{2 \rho n+(\rho n)^{2}}-\rho n=\sqrt{2(0.0057)(5.718)+(0.0057 \times 5.718)^{2}}-0.0057 \times 5.718=0.225$
$j=1-k / 3=1-0.225 / 3=0.925$
$f_{s}=\frac{M_{s l}}{A_{s} j d}=\frac{2,141(12)}{28 \times 0.31(0.925 \times 58.4)}=56.6 \mathrm{ksi} \leq 60 \mathrm{ksi}$
$\therefore f_{s}=56.6 \mathrm{ksi}$
$d_{c}=2.5+0.5 \times 5 / 8=2.81$
$\beta_{s}=1+\frac{d_{c}}{0.7\left(h-d_{c}\right)}=1+\frac{2.81}{0.7(62.5-2.81)}=1.067$
$s \leq \frac{700 \gamma_{e}}{\beta_{s} f_{s}}-2 d_{c}=\frac{700 \times 0.75}{1.067 \times 56.6}-2 \times 2.81=3.07 \prime$
This spacing is too small. Aim for 6 " spacing, which is more realistic.
Try: 17 top bars: \# 5 @ 12" alternating with \# 6 @ 12"
17 bottom bars: \# 5 @ 12" alternating with \# 6 @ 12"

Distances to centroid of bars:
Top Bars: $\frac{(2.5+0.5 \times 5 / 8)+(2.5+0.5 \times 3 / 4)}{2}=2.84^{\prime \prime}$
Bottom Bars: $\frac{(8.5-(2+5 / 8+0.5 \times 5 / 8))+(8.5-(2+5 / 8+0.5 \times 3 / 4))}{2}=5.53{ }^{\prime \prime}$
$\bar{x}=\frac{17 \times 2.84+17 \times 5.53}{34}=4.19 "$
$d=62.5-4.19=58.31^{\prime \prime}$
$\rho=\frac{A_{s}}{b d}=\frac{17 \times 0.31+17 \times 0.44}{(26)(58.31)}=\frac{12.75}{(26)(58.31)}=0.0084$
$k=\sqrt{2 \rho n+(\rho n)^{2}}-\rho n=\sqrt{2(0.0084)(5.718)+(0.0084 \times 5.718)^{2}}-0.0084 \times 5.718=0.266$
$j=1-k / 3=1-0.266 / 3=0.911$
$f_{s}=\frac{M_{s l}}{A_{s} j d}=\frac{2,141(12)}{12.75(0.911 \times 58.3)}=37.9 \mathrm{ksi}$
$d_{c}=2.84375$
$\beta_{s}=1+\frac{d_{c}}{0.7\left(h-d_{c}\right)}=1+\frac{2.84375}{0.7(62.5-2.84375)}=1.068$
$s \leq \frac{700 \gamma_{e}}{\beta_{s} f_{s}}-2 d_{c}=\frac{700 \times 0.75}{1.068 \times 37.9}-2 \times 2.84375=7.28^{\prime \prime}>6^{\prime \prime} \mathrm{O} . \mathrm{K}$.

## (b) Shear Reinforcement

If prestressing steel is ignored, \#4 A615 stirrups @ 4" o.c. will be needed.
Redesign by using A1035 U shaped \# 4 stirrups.
$s=\frac{A_{v} f_{y} d_{v} \cot \theta}{V_{s}}=\frac{0.4(100)(55.63) \cot 45}{284.6}=7.8^{\prime \prime} \quad$ Controls, say 7"
§5.8.2.5

$$
A_{v} \geq 0.0316 \sqrt{f_{c}^{\prime}} \frac{b_{v} s}{f_{y}} ; \quad 0.4 \geq 0.0316 \sqrt{7} \frac{8 s}{124} ; \quad s \leq 74 "
$$

§5.8.2.9 $v_{u}=\frac{\left|V_{u}-\phi V_{p}\right|}{\left\langle b_{v}\right.}=\frac{323.1}{0.9 \times 8 \times 5.63}=0.81 \mathrm{ksi} \quad$ Note that $\mathrm{s}<74$ "; hence, the simplified procedure with $\beta=2$ and $\theta=45^{\circ}$ may be used.

$$
v_{u}=0.81 \mathrm{ksi}<0.125 f_{c}^{\prime}=0.125 \times 8=1 \mathrm{ksi}
$$

$$
\therefore s_{\max } \leq \text { smaller of }\left\{\begin{array}{l}
0.8 d_{v}=0.8 \times 55.63=44.5 " \\
24 " \text { Controls }
\end{array}\right.
$$

Provide A1035 U shaped \#4 stirrups @ 7" o.c.

## Interface Shear Reinforcement

Factored horizontal shear, $\mathrm{V}_{\mathrm{u}}=323 \mathrm{kips}$

$$
V_{n}=c A_{c v}+\mu\left[A_{v f} f_{y}+P_{c}\right] ; \quad c=0.28 ; \quad \mu=1.0
$$

Although shear reinforcement spacing was previously calculated to be 7" o.c., calculate the spacing of A1035 interface shear reinforcement with $\mathrm{f}_{\mathrm{y}}$ limited to 60 ksi .

$$
V_{u}=\phi V_{n i}=\phi\left[c A_{c v}+\mu\left(A_{v f} f_{y}+P_{c}\right)\right] ; \quad 323=0.9[0.28(20 \times s)+1.0(0.4 \times 100+0)] ; \quad s=57 "
$$

Say 55"
5.8.4.1-2 \& 5.8.4.1-3 $V_{n} \leq \max$ of $\left\{\begin{array}{l}0.2 f_{c}^{\prime}{ }_{c} A_{c v}=0.2 \times 7(52 \times 20)=1456 \mathrm{kips} \\ 0.8 A_{c v}=0.8 \times 7(52 \times 20)=5824 \mathrm{kips}\end{array}\right.$

Hence, $\mathrm{V}_{\mathrm{n}}=323 / 0.9=359 \mathrm{kips}$ as used is o.k.

$$
A_{v f} \geq \frac{0.05 b_{v}}{f_{y}}=\frac{0.05 \times 20}{60}=0.017 \mathrm{in}^{2} / \text { length }
$$

5.8.4.10-4 Actual $A_{v f}=0.40 / 57=0.0070$ in $^{2} /$ length $\therefore N . G$. , Redcue the spacing

$$
0.40 / s=0.017 ; \quad s=23.5^{\prime \prime} \quad \text { say } 23^{\prime \prime}
$$

Use \#4 U shaped A1035 interface reinforcement at $\mathrm{s}=23$ ".
From a durability point of view corrosion resistant A1035 interface shear reinforcement provides advantages. However, practical issues may arise from a placement point of view as the spacing of girder shear reinforcement and that for interface reinforcement are significantly different.

## Example 2 $^{*}$ Simple Span T-Beam

## Elevation

The reinforcement using A615 rebars is shown below.

The stirrups are symmetrically spaced at 10 " o.c. up to $5^{\prime}$ from the bearing center line and then @ 16 " o.c. up to $25^{\prime}$.

[^1]Redesign by using A1035 bars with a specified yield strength of 100 ksi .

## 1. Girder - Flexure

## Capacity

$\mathrm{M}_{\mathrm{u}}=2052 \mathrm{k}-\mathrm{ft}$.
With $10 \# 8$ bars in 2 layers, which fit within $22 ", \phi \mathrm{M}_{\mathrm{n}}=2204 \mathrm{k}-\mathrm{ft}$. O.K.
Maximum Reinforcement Requirement (§5.7.2.1)
$\frac{c}{d_{t}}=\frac{3.04}{39.5}=0.077<\frac{3}{8} \quad \therefore$ Tension - controlled, O.K.
Minimum Reinforcement Requirement ( $\S 5.7 .3 .3 .2$ )
$1.2 \mathrm{M}_{\mathrm{cr}}=1.2(4691 / 12)=469 \mathrm{k}-\mathrm{ft} \quad$ Controls
$1.33 \mathrm{M}_{\mathrm{u}}=1.33(2052)=2729 \mathrm{k}-\mathrm{ft}$
$\phi \mathrm{M}_{\mathrm{n}}=2204 \mathrm{k}-\mathrm{ft}>1.2 \mathrm{M}_{\mathrm{cr}} \quad$ Hence, minimum reinforcement requirements are met.
Maximum Spacing of Tension Reinforcement (§5.7.3.4)
$\mathrm{I}_{\mathrm{g}}=262874 \mathrm{in} .^{4}$
$f_{c}=\frac{M y}{I}=\frac{(1336 \times 12)(42-15.42)}{262874}=1.62 \mathrm{ksi}$
§5.4.2.6: $\quad f_{r}=0.24 \sqrt{f_{c}^{\prime}}=0.24 \sqrt{4}=0.48 \mathrm{ksi}$
$\mathrm{f}_{\mathrm{c}}>80 \%$ of $\mathrm{f}_{\mathrm{r}}$; hence, §5.7.3.4 needs to be checked.
$\mathrm{M}_{\text {service }}=1336 \mathrm{k}-\mathrm{ft} .>\mathrm{M}_{\mathrm{cr}}=391 \mathrm{k}$-ft. Use cracked transformed section properties
$\mathrm{I}_{\mathrm{cr}}=63200 \mathrm{in} .{ }^{4}$
$\mathrm{y}^{-}=6.21 \mathrm{in}$. (Measured from compression face)
$d_{c}=1.5+0.5+1 / 2(1)=2.5 "$
$f_{s}=n \frac{M y}{I}=\frac{29000}{57 \sqrt{4000}} \times \frac{(1336 \times 12)(42-2.5-6.21)}{63200}=67.9 k s i \quad\left(\right.$ Approximately $0.6 \mathrm{f}_{\mathrm{y}}=0.6 \times 100$
$=60 \mathrm{ksi}$ )
$\gamma_{\mathrm{e}}=0.75$
$\beta_{s}=1+\frac{d_{c}}{0.7\left(h-d_{c}\right)}=1+\frac{2.5}{0.7(42-2.5)}=1.09$
$s \leq \frac{700 \gamma_{e}}{\beta_{s} f_{s}}-2 d_{c}=\frac{700 \times 0.75}{1.09 \times 67.9}-2 \times 2.5=2.09 "$

The actual spacing of $5 \# 8$ bars, in each layer, is $1+\frac{22-2(1.5+0.5)-5 \times 1}{4}=4.25^{\prime \prime}>2.09$ ", which is not acceptable.

Revise the design by using 12 \# 8 bars in 2 layers.
Capacity
$\mathrm{M}_{\mathrm{u}}=2052 \mathrm{k}-\mathrm{ft}$.
$\phi \mathrm{M}_{\mathrm{n}}=2672 \mathrm{k}-\mathrm{ft} . \quad$ O.K.
Maximum Reinforcement Requirement (§5.7.2.1)
$\frac{c}{d_{t}}=\frac{3.64}{39.5}=0.109<\frac{3}{8} \quad \therefore$ Tension - controlled, O.K.
Minimum Reinforcement Requirement (§5.7.3.3.2)
$1.2 \mathrm{M}_{\mathrm{cr}}=1.2(4803 / 12)=480 \mathrm{k}-\mathrm{ft} \quad$ Controls
$1.33 \mathrm{M}_{\mathrm{u}}=1.33(2052)=2729 \mathrm{k}-\mathrm{ft}$
$\phi \mathrm{M}_{\mathrm{n}}=2672 \mathrm{k}-\mathrm{ft}>1.2 \mathrm{M}_{\mathrm{cr}} \quad$ Hence, minimum reinforcement requirements are met.
Maximum Spacing of Tension Reinforcement (§5.7.3.4)
$\mathrm{I}_{\mathrm{g}}=267731 \mathrm{in} .^{4}$
$f_{c}=\frac{M y}{I}=\frac{(1336 \times 12)(42-15.56)}{267731}=1.58 \mathrm{ksi}$
§5.4.2.6: $\quad f_{r}=0.24 \sqrt{f^{\prime}{ }_{c}}=0.24 \sqrt{4}=0.48 \mathrm{ksi}$
$\mathrm{f}_{\mathrm{c}}>80 \%$ of $\mathrm{f}_{\mathrm{r}}$; hence, §5.7.3.4 needs to be checked.
$\mathrm{M}_{\text {service }}=1336 \mathrm{k}-\mathrm{ft} .>\mathrm{M}_{\mathrm{cr}}=400 \mathrm{k}$-ft. Use cracked transformed section properties
$\mathrm{I}_{\mathrm{cr}}=74218 \mathrm{in} .{ }^{4}$
$\mathrm{y}^{-}=6.74 \mathrm{in}$. (Measured from compression face)
$d_{c}=1.5+0.5+1 / 2(1)=2.5^{\prime \prime}$
$f_{s}=n \frac{M y}{I}=\frac{29000}{57 \sqrt{4000}} \times \frac{(1336 \times 12)(42-2.5-6.74)}{74218}=56.9 k s i\left(\right.$ Approximately $0.6 \mathrm{f}_{\mathrm{y}}=0.6 \times 100$
$=60 \mathrm{ksi}$ )
$s \leq \frac{700 \gamma_{e}}{\beta_{s} f_{s}}-2 d_{c}$
$\gamma_{\mathrm{e}}=0.75$
$\beta_{s}=1+\frac{d_{c}}{0.7\left(h-d_{c}\right)}=1+\frac{2.5}{0.7(42-2.5)}=1.09$
$s \leq \frac{700 \gamma_{e}}{\beta_{s} f_{s}}-2 d_{c}=\frac{700 \times 0.75}{1.09 \times 56.9}-2 \times 2.5=3.46 "$
The actual spacing of $12 \# 8$ bars, in each layer, is $1+\frac{22-2(1.5+0.5)-6 \times 1}{5}=3.4 "<3.46$ ", which is acceptable.

## Skin Reinforcement (§5.7.3.4)

$d_{e}=39.6^{\prime \prime}>36$ "; skin reinforcement needs to be provided. However, for consistency with the original example, skin reinforcement is not provided in the redesign with A1035 reinforcing bars.

## Fatigue Limit State

$\mathrm{M}_{\mathrm{f}}=278 \mathrm{k}-\mathrm{ft}$
Cracked transformed section properties: $\mathrm{I}_{\mathrm{cr}}=74218 \mathrm{in}^{4}$ and $\mathrm{y}^{-}=6.74 \mathrm{in}$.
$f_{s}=n \frac{M y}{I_{c r}}=8 \frac{(278 \times 12)(42-2.5-6.74)}{74218}=11.8 \mathrm{ksi}$
$f_{f}=21-0.33 f_{\text {min }}+8(r / h)$
$\mathrm{f}_{\text {min }}=$ stress under dead load moment, which is $597 \mathrm{k}-\mathrm{ft} .>\mathrm{M}_{\mathrm{cr}}=400 \mathrm{k}-\mathrm{ft}$.
$f_{\min }=n \frac{M y}{I_{c r}}=8 \frac{(597 \times 12)(42-2.5-6.74)}{74218}=25.3 \mathrm{ksi}$
$f_{f}=21-0.33 f_{\min }+8(r / h)=21-0.33 \times 25.3+8 \times 0.3=15.1 k s i$
$11.8 \mathrm{ksi}<15.1 \mathrm{ksi}$ O.K.

Summary: From a strength point of view, 10 \#8 A1035 bars $\left(\mathrm{A}_{\mathrm{s}}=7.9 \mathrm{in}.{ }^{2}\right)$ provide adequate flexural capacity. However, the requirements related to spacing of mild reinforcement (§5.7.3.4) result in additional area of steel. The use of A1035 bars as flexural reinforcement saves about $49 \%$ in terms of the amount of steel ( $10 \# 11 \mathrm{~A} 615\left(\mathrm{~A}_{\mathrm{s}}=18.72\right.$ in. $\left.{ }^{2}\right)$ vs. $12 \# 8 \mathrm{~A} 1035\left(\mathrm{~A}_{\mathrm{s}}=9.48\right.$ in. ${ }^{2}$ )).

## Girder - Shear

| h | 42.0 | in. |
| :--- | :--- | :--- |
| $\mathrm{d}_{\mathrm{s}}=\mathrm{d}_{\mathrm{e}}$ | 38.5 | in. |
| a | 3.09 | in. |
| $\mathrm{d}_{\mathrm{v}}=\mathrm{d}_{\mathrm{s}}-\mathrm{a} / 2$ | 37.0 | in. |
| 0.72 h | 30.2 | in. |
| $0.9 \mathrm{~d}_{\mathrm{e}}$ | 34.7 | in. |
| Final $\mathrm{d}_{\mathrm{v}}$ | 37.0 | in. |

Assume 1'-4" wide support.
The critical section is at $x=37+8=45^{\prime \prime}=3.75^{\prime}$

| Distance (ft.) <br> x | Point along span <br> $\mathrm{x} / \mathrm{L}$ | $\mathrm{V}_{\mathrm{u}}$ <br> kips |
| :---: | :---: | :---: |
| 0 | 0 | 189 |
| 0.67 | 0.0134 | 185 |
| 3.75 | 0.07 | 168 |
| 5 | 0.1 | 160 |

| 15 | 0.3 | 103 |
| 20 | 0.4 | 75 |
| 25 | 0.5 | 46 |

Use U shaped \# 4 A1035 stirrups

$$
s_{\max }=\frac{A_{v} f_{y}}{0.0316 \sqrt{f_{c}^{\prime}} b_{v}}{\begin{array}{c}
\mathrm{A}_{\mathrm{v}} \\
\mathrm{f}_{\mathrm{c}}
\end{array}}_{\mathrm{f}_{\mathrm{y}}} \begin{array}{ccc}
0.4 & \mathrm{in.}^{2} \\
\mathrm{~b}_{\mathrm{v}} & \mathrm{ksi} \\
\mathrm{~b}_{\mathrm{v}} & 22 & \mathrm{ksi} \\
& \mathrm{in.} \\
\mathrm{~s}_{\max } & 28.8 \mathrm{in.}
\end{array}
$$

The simplified procedure for the determination of $\beta$ and $\theta$ may be used if the spacing of the stirrups does not exceed $\mathrm{s}_{\max }=28.8 \mathrm{in}$. For the simplified procedure $\beta=2.0$ and $\theta=45^{\circ}$.

| Distance (ft.) <br> x | $\mathrm{v}_{\mathrm{u}}$ <br> ksi | Is $\mathrm{v}_{\mathrm{u}}<0.125 \mathrm{f}_{\mathrm{c}}$ ? | $\mathrm{s}_{\text {max }}$ (in.) |
| :---: | :---: | :---: | :---: |
| 0 | 0.258 | Yes | 24 |
| 0.67 | 0.253 | Yes | 24 |
| 3.75 | 0.229 | Yes | 24 |
| 5 | 0.219 | Yes | 24 |
| 10 | 0.180 | Yes | 24 |
| 15 | 0.141 | Yes | 24 |
| 20 | 0.102 | Yes | 24 |
| 25 | 0.063 | Yes | 24 |

The maximum shear resistance, $V_{n}$, is given by the lesser of $V_{n}=V_{c}+V_{s}+V_{p}$ and $V_{n}=0.25 f^{\prime}{ }_{c} b_{v} d_{v}$. $\mathrm{V}_{\mathrm{n}}=0.25 \mathrm{f}^{\prime}{ }_{\mathrm{c}} \mathrm{b}_{\mathrm{v}} \mathrm{d}_{\mathrm{v}}=0.25(4)(22)(37)=814$ kips
$\mathrm{V}_{\mathrm{u}} @$ the critical section $=168<\phi \mathrm{V}_{\mathrm{n}}=0.9(814)=733 \mathrm{kips}$

$$
\begin{aligned}
& V_{c}=0.0316 \beta \sqrt{f_{c}^{\prime}} b_{v} d_{v}=0.0316(2) \sqrt{4}(22)(37)=103 \mathrm{kips} \\
& V_{s}=\frac{A_{v} f_{y} d_{v}(\cot \theta+\cot \alpha)(\sin \alpha)}{s}=\frac{A_{v} f_{y} d_{v}(\cot 45+\cot 90)(\sin 90)}{s}=\frac{A_{v} f_{y} d_{v}}{s}
\end{aligned}
$$

At the critical section, $\mathrm{V}_{\mathrm{u}}=168$ kips

$$
\begin{aligned}
& V_{u}=\phi\left(V_{c}+V_{p}+V_{s}\right) \\
& 168=0.9\left(103+0+\frac{A_{v} f_{y} d_{v}}{s}\right)=0.9\left(103+0+\frac{0.4 \times 100 \times 37}{s}\right) ; s=17.69^{\prime \prime}
\end{aligned}
$$

Stirrup layout (symmetrically placed) of U-shaped \#4 A1035 stirrups:

- Start the first stirrup at 9" from the support.
- Provide 3 spaces @ 17" o.c.
- Provide 10 spaces @ 24" o.c.

## Tensile Capacity of Longitudinal Reinforcement (§5.8.3.5)

The following equation needs to be satisfied.
$A_{p s} f_{p s}+A_{s} f_{y} \geq \frac{\left|M_{u}\right|}{\phi d_{v}}+0.5 \frac{N_{u}}{\phi}+\left(\left|\frac{V_{u}}{\phi}-V_{p}\right|-0.5 V_{s}\right) \cot \theta$
For this case, the above equation is simplified to $A_{s} f_{y} \geq \frac{M_{u}}{\phi d_{v}}+\left[\left(\frac{V_{u}}{\phi}\right)-0.5 V_{s}\right] \cot \theta$

## (i) Critical Section

$\mathrm{M}_{\mathrm{u}}=633 \mathrm{k}$-ft \& $\mathrm{V}_{\mathrm{u}}=168 \mathrm{kips}$
For \# 4 stirrups @ 17" o.c., $V_{s}=\frac{A_{v} f_{y} d_{v}}{s}=\frac{0.4 \times 100 \times 37}{17}=87.1 \mathrm{kips}$
$V_{s}$ in Eq. 5.8.3.5-1 cannot be $V_{u} / \phi=168 / 0.9=187 \mathrm{kips} \quad$ Hence, use $V_{s}=87.1 \mathrm{kips}$.
$T=\frac{M_{u}}{\phi d_{v}}+\left[\left(\frac{V_{u}}{\phi}\right)-0.5 V_{s}\right] \cot \theta=\frac{633 \times 12}{0.9 \times 37}+\left[\left(\frac{168}{0.9}\right)-0.5 \times 87.1\right] \cot (45)=371 \mathrm{kips}$
$l_{d b}=\max \left(\frac{1.25 A_{b} f_{y}}{\sqrt{f_{c}^{\prime}}}, 0.4 d_{b} f_{y}\right)=\max \left(\frac{1.25 \times 0.60 \times 100}{\sqrt{4}}, 0.4 \times 0.875 \times 100\right)=37.5^{\prime \prime}$
No modification factors are necessary; hence, $l_{d}=l_{d b}=37.5^{\prime \prime}>12 " \therefore l_{d}=38^{\prime \prime}$
As seen below, the available distance to develop the bar is 55 ", which is larger than $l_{d}=38$ ".
Therefore, $\mathrm{f}_{\mathrm{sx}}=\mathrm{f}_{\mathrm{y}}$

$T_{\text {provided }}=A_{s} f_{y}=(16 \times 0.79) 100=1264 k i p s>T=371$ kips $\quad$ O.K.
(ii) Midspan
$\mathrm{M}_{\mathrm{u}}=2052 \mathrm{k}-\mathrm{ft}$ and $\mathrm{V}_{\mathrm{u}}=46 \mathrm{kips}$
For \# 4 stirrups @ 24 " o.c., $V_{s}=\frac{A_{v} f_{y} d_{v}}{s}=\frac{0.4 \times 100 \times 37}{24}=61.7 \mathrm{kips}$
$\mathrm{V}_{\mathrm{s}}$ in Eq. 5.8.3.5-1 cannot be taken greater than $\mathrm{V}_{\mathrm{u}} / \phi=46 / 0.9=51 \mathrm{kips}$; hence, use $\mathrm{V}_{\mathrm{s}}=51 \mathrm{kips}$.

$$
T=\frac{M_{u}}{\phi d_{v}}+\left[\left(\frac{V_{u}}{\phi}\right)-0.5 V_{s}\right] \cot \theta=\frac{2052 \times 12}{0.9 \times 37}+\left[\left(\frac{46}{0.9}\right)-0.5 \times 51\right] \cot (45)=765 \mathrm{kips}
$$

At midspan, there is no concern about development length; hence, $\mathrm{f}_{\mathrm{sx}}=\mathrm{f}_{\mathrm{y}}$.

$$
T_{\text {provided }}=A_{s} f_{y}=(16 \times 0.79) 100=1264 \mathrm{kips}>T=765 \mathrm{kips} \quad O . K .
$$

## (iii) Face of Bearing

$\mathrm{M}_{\mathrm{u}}=0$ and $\mathrm{V}_{\mathrm{u}}=168 \mathrm{kips}$ (Note: $V_{u}$ is taken as the shear at $d_{v}$ from the face of support.)
For \# 4 stirrups @ 17" o.c., $V_{s}=\frac{A_{v} f_{y} d_{v}}{s}=\frac{0.4 \times 100 \times 37}{17}=87.1 \mathrm{kips}$
$\mathrm{V}_{\mathrm{s}}$ in Eq. 5.8.3.5-1 cannot be taken greater than $\mathrm{V}_{\mathrm{u}} / \phi=168 / 0.9=187 \mathrm{kips}$; hence, use $\mathrm{V}_{\mathrm{s}}=87.1$ kips.
$T=\frac{M_{u}}{\phi d_{v}}+\left[\left(\frac{V_{u}}{\phi}\right)-0.5 V_{s}\right] \cot \theta=0+\left[\left(\frac{168}{0.9}\right)-0.5 \times 87.1\right] \cot (45)=143 \mathrm{kips}$
$l_{d}=38^{\prime \prime}$
As seen below, the available distance to develop the bar is 21 ".

$f_{s x}=\left(\frac{l_{d, \text { available }}}{l_{d}}\right) f_{y}=\left(\frac{21}{38}\right) 100=55.2 \mathrm{ksi}$
$T_{\text {provided }}=A_{s} f_{s x}=(16 \times 0.79) 55.2=698 \mathrm{kips}>T=143 \mathrm{kips} \quad$ O.K.

[^0]:    * Based on an example prepared as part of "Training Classes on AASHTO LRFD Bridge Specifications," ODOT, R.A. Miller
